Letter From Travis

Dear Valued Customer,

We are pleased to highlight for you our latest products and services. We appreciate the opportunity to continue to earn your business and stand ready to assist you in any way that we can. Your trust is our most valuable asset, and we remain committed to the principles that have earned your trust and business over the past 64 years.
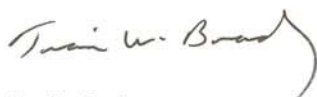

It's our culture! When my grandfather founded Brady Industries in 1947 (then called City Janitor Supply), he did so on the foundation of honesty, integrity, and hard work. These same principles have defined our culture for over 60 years and still govern our business today. This culture is at the core of everything that we do, and it has helped us to build a reputation as a company that you can count on.

It's our products! We partner with industry-leading manufacturers to bring our customers innovative solutions to even their toughest challenges. Whether it's a need to tackle a particularly difficult cleaning task, a desire to find environmentally sound solutions, or a goal to reduce total cleaning costs, we've got you covered. We'll bring to you the right product, with the right support, at the right price.

It's our people! After all is said and done, it's the people at Brady Industries that have made us successful. With an average of over 10 years of industry experience, our customer service and sales consultants have the knowledge and skills to help you at every step of the process, and the dedication of our entire team is truly legendary.

I thank you for your business, and whether you're new to Brady Industries or have been working with us for years, from all of us I say, "**Welcome to the Family**"!

Sincerely,

Travis Brady
President & CEO

Mission Statement

Brady Industries is the premier cleaning solutions provider throughout the Western United States. We provide cleaning solutions to our customers while exceeding their expectations with quality, service and integrity.

We believe our employees are our greatest asset. They are dedicated, highly trained professionals who always demonstrate the utmost in integrity and ethics.

We build relationships with our customers to gain an intimate understanding of their business needs in order to deliver value added solutions through quality products, efficient processes and exceptional customer service.

We are dedicated to finding solutions that are both technologically superior and cost effective. We are focused on continuous improvement and believe these guiding values will sustain Brady Industries and our customers' success now and in the future.

Internal Training

Service Focused - Only the customers' perception of our service counts. All employees are customer service focused and have a clear understanding of what needs to be accomplished to exceed our customers' expectations. Our reputation is built on understanding our customers' needs.

Highly Skilled and Proficient - Dedicated, highly trained professionals. Brady Industries is committed to providing training to our employees. We understand that the better skilled and proficient our staff is, the easier it is to do business together. We provide a wide variety of training which helps us to make sure we have the right person in the best possible position to assist our customers.

Internal Communications - Tell who you know, what you know. We take the time to listen to our employees, customers and vendors. We share that knowledge with all levels of our organization. We communicate that knowledge with informal and formal training programs.

Next Level - Staying ahead of the curve. If there is new information or technology that will help us to become better at what we do, we will find it. We pursue technology, products, ideas and resources that are available to help us move to the next level in servicing our customers' needs.

Efficient Operations - Continuous Improvement. We learn as much as we can and share that knowledge with our customers to build longstanding relationships. We are continually reviewing, evaluating and improving our processes to become more efficient.

Brady's Sustainable Business Strategy...

Introducing *Go*Green

In an effort to help your business become more environmentally friendly, Brady has pioneered a green cleaning partnership program called GoGreen. This program will provide you with a sustainable business strategy; a strategy that allows you to prosper economically, to have a positive impact on the environment, and to be socially responsible to all who work in and visit your building.

The extraction of raw materials and manufacturing of commercial and institutional cleaning products have significant environmental impacts, as does their transportation, use, and disposal. Many of our raw materials are limited and nonrenewable, which means that once depleted, they are no longer available to future generations for their use.

Brady's program will help you reuse products where appropriate, recycle when possible, and most importantly, reduce usage by the selection of proper products and procedures.

Green is about more than just products. In addition to helping you identify and select the best products, Brady's program will help you continually improve the appearance and health of your facility through proper training, ongoing educational seminars, and private consulting. We will show you how changing to a green cleaning program can reduce absenteeism and improve the productivity of your employees. And we will measure our results and be accountable to you, our business partner.

The *Go*Green Program

Technical Concepts Eco-Urinal MD 1500

Made from vitreous china with a white finish. Half-stall urinal, large basin. An enzyme-based Eco-Bug tablet is placed in the cartridge and dissolves during usage, releasing enzymes that continue to multiply in the drain, effectively breaking down uric scale. System includes the Eco-Urinal, installation instructions, 2 wall hanger brackets, screws, washers & wall anchors. Saves an average of 40,000 gallons of water each year. The smart design allow the urinal to be retrofitted at the same height as traditional urinals. Others often require costly changes to the plumbing.

Spartan CX3 Bio-Assist® Extraction Carpet Cleaner

Features a revolutionary safe and natural approach to cleaning carpet. Does not utilize the typical solvents and phosphates for cleaning, but rather relies on a superior detergent system coupled with the digestive power of the Consume™ bacteria. These non-pathogenic microorganisms provide an environmentally sound process with which residual odors and soils can be eliminated. Utilizes low-foaming detergents that dry to a non-tacky powder, so it will not contribute to carpet resoiling. It contains no optical brighteners that can distort colors and is safe for use on 5th generation carpeting due to its detergent system and mild pH. Works with both hot and cold water leaving the carpeting clean, soft and with a subtle springtime fresh fragrance.

California Code of Regulations VOC Content

The State of California regulates the VOC levels of various consumer products due to concerns over air quality. The California Code of Regulations (Article 2 Section 94509, Title 17) specifies the maximum allowable Volatile Organic Compound (VOC) levels for several cleaning product categories.

For the cleaning product categories that are not represented by other green certifications, these regulations can assist in the product selection process.

Carpet & Rug Institute Green Label

The Carpet & Rug Institute (CRI) is the national trade organization representing the carpet and rug industry. In an effort to promote better indoor air quality, CRI has developed the Green Label certification for carpet, cushion, adhesives, and vacuum cleaners.

To qualify for Green Label, vacuum cleaners must go through a stringent testing process that measures three key performance factors: soil removal, dust containment and carpet appearance retention. CRI Green Label vacuum cleaners, and other equipment that is demonstrably better for indoor air quality, are recognized and promoted in the LEED for Existing Buildings Green Building Rating System under the Low Environmental Impact Cleaning Equipment Policy credit.

CIMS & CIMS – GB

CIMS defines management, operational performance system, and process and performance measure requirements for both building service contractors and organizations that self-perform cleaning. CIMS objectives are to encourage cleaning organizations to implement management best-practices to ensure a thorough understanding of the customer's service requirements, and therefore deliver quality, sustainable service. CIMS-GB ensures that a cleaning organization utilizes environmentally preferable cleaning practices and products in line with LEED-EBOM. Compliance with CIMS-GB is dependent on dedication to quality and meeting customer requirements in six management principles: quality systems; service delivery; human resources; health, safety and environmental stewardship; management commitment; and green buildings. CIMS-GB requires a green cleaning policy separate from CIMS's general environmental policy—addressing how green cleaning practices will be utilized, managed, and evaluated. CIMS-GB requires a dedicated green high performance cleaning program that satisfies IEQ credits outlined in LEED-EBOM. CIMS-GB also requires the purchase of sustainable cleaning products and materials, satisfying specific IEQ and MR credits and prerequisites in LEED-EBOM. CIMS-GB recommends provisions for chemical and pollutant source control and recommends an integrated pest management program to fulfill SS credits in LEED-EBOM.

Energy Conservation

Replace incandescent bulbs with energy saving compact fluorescent light bulbs and consider converting your night time cleaning operations to day cleaning to reduce energy usage.

Entryway Matting Systems

Entryway mats are the first defense against dirt, dust, pollen and other particles entering a building. Utilizing the appropriate size entryway mat and developing the associated cleaning strategies to clean and maintain the matting and exterior walkways is an excellent way to contribute to better indoor air quality and to keep the building cleaner.

Environmentally Preferred Rating (EPR)

EPR is the first environmental standards, audit and accreditation program for the plastics industry. Plastic makers that meet strict environmental standards can receive an industry "seal of approval" certifying that they maintain environmentally sensitive production facilities. EPR is managed by the California Film Extruders & Converters Association (CFECA).

The EPR program focuses on airborne emissions, liquid emissions, pellet containment, elimination of heavy metals, recycling programs and post-consumer recycled material use

Sustainability Identifiers

and participation in local environmental activities such as waterway and highway cleanup efforts or school education programs. The program requires a thorough third-party environmental audit of a company's production facilities.

EPA Comprehensive Procurement Guidelines (CPG)

The EPA is a federal agency whose mission is "to protect human health and the environment." CPG is the federal government's buy-recycled program and is authorized by Congress under the Resource Conservation and Recovery Act (RCRA). EPA is required to designate products that are or can be made with recovered materials and to recommend practices for buying these products, including ranges of post consumer and total recovered materials content.

Once a product is designated, procuring agencies are required to purchase it with the highest recovered material content level practicable.

CPG-designated products from the cleaning industry include paper towels (40-60% postconsumer fiber), bathroom tissue, (20-60% postconsumer fiber), and plastic trash bags (10-100% postconsumer content). CPG is referenced as the requirement to meet in the Sustainable Cleaning Products & Materials section of the LEED for Existing Buildings Green Building Rating System.

EPA Design for the Environment (DFE)

The Design for the Environment (DFE) Program is one of EPA's premier partnership programs. DFE works with a broad range of stakeholders to reduce risks to people and the environment by preventing pollution. In the cleaning industry, the program partners with manufacturers to improve the human health and environmental profile of their products.

DFE reviews all product ingredients, by functional group (surfactant, solvent, etc.), identifying their key health and environmental characteristics and building a continuum of improvement toward safer chemicals. DFE review is green-chemistry focus, recognizing those products whose ingredients fall on the green end of the continuum. In addition, DFE has teamed with the GreenBlue Institute to develop the CleanGredients database, which uses the DFE methodology and "green screen" to identify safer chemicals for cleaning products (see www.CleanGredients.org).

Recognition from the DFE Program can be used to identify cleaning product that have demonstrated an environmentally preferable profile.

Forest Stewardship Council

In many forests around the world, logging still contributes to habitat destruction, water pollution, displacement of indigenous peoples, and violence against people who work in the forest and the wildlife that dwells there. Many consumers of wood and paper, and many forest products companies believe that the link between logging and these negative impacts can be broken, and that forests can be managed and protected at the same time. Forest Stewardship Council certification is one way to improve the practice of forestry (see www.fsc.org).

Greenguard

GREENGUARD Environmental Institute (GEI) is an industry-independent, non-profit organization that oversees the GREENGUARD certification program. GEI's mission is "to improve public health and quality of life through programs that improve indoor air." GEI establishes acceptable indoor air standards for indoor products, environments and buildings.

GEI has product certification programs for low emitting interior building materials, furnishings and finish systems, as well as cleaning products and systems, including a program for Children & Schools that identifies products certified for us in education environments.

Green Seal

Green seal is an independent, non-profit organization, located in Washington, DC, that strives to achieve a healthier and cleaner environment by identifying and promoting products and services that cause less pollution and waste, conserve resources, and habitats, and minimize global warming and ozone depletion. Green Seal provides credible and unbiased information in order to direct the purchaser to environmentally responsible products and services. For more information on Green Seal, Inc. visit www.greensea.org.

"This product meets Green Seal's environmental standard for industrial and institutional cleaners based on its reduced human and aquatic toxicity and reduced smog production potential."

Microfiber Technology

Microfiber products contribute to better indoor air quality with their superior dust and dirt containment, and they also contribute to source reduction by allowing for the use of less cleaning chemicals and water.

Microfiber Grabs Soil   Cotton Fiber Push Soil
Recycling

You can divert waste from the landfills with a recycling program for paper, plastic and glass, as well as light bulbs and batteries. Then "close the circle" by purchasing items with post-consumer recycled content. You can also look into composting materials that are eligible, like food and landscape waste. Reduce, Recycle, Reuse!

USGBC and LEED®

USGBC (U.S. Green Building Council) is a non-profit organization of representatives from across the building industry leading a national consensus for producing a new generation of buildings that deliver high performance inside and out. USGBC's mission is "to promote buildings that are environmentally responsible, profitable and healthy places to live and work."

USGBC has developed the LEED (Leadership in Energy & Environmental Design) Green Building Rating System, which is a voluntary, consensus-based national standard for developing high-performance, sustainable buildings. LEED was created to define "green building" by establishing a common standard of measurement and to stimulate "green competition."

A LEED for Existing Building projects can earn credits toward green building certification by implementing a green cleaning program, and a LEED for New Construction project can earn an innovation credit by submitting a written green cleaning policy.

Even if your facility is not pursuing LEED certification, LEED for Existing Buildings can still be used as a guide to describe best practices in operations and maintenance of a facility.

Green Glossary

American Forest & Paper Association (AF&PA)

The national trade association of the forest, paper and wood products and industry, which works on public policy to benefit the US paper and forest products industry.

Bio-based

There have been several government initiatives over the past five years to increase our support of the agriculture industry and reduce our nation's dependency on foreign petroleum resources. The Farm Security and Rural Investment Act (FSRIA) addresses bio-based products and defines them as a commercial or industrial product that is composed, in whole or significant part, of biological products or renewable domestic agricultural materials or forestry materials. Therefore, industrial products, such as surfactants and solvents are now being produced from renewable plant resources, which are typically biodegradable, friendlier to the environment and supportive of the agricultural industry. The federal government has mandated, through the FSRIA, that federal agencies purchase bio-based products wherever possible.

Biodegradable

Materials that are capable of undergoing biological degradation when oxygen is present. Process requires bacteria, heat, moisture and time. Composting is a type of biodegradation.

Chlorine Bleaching Classifications

A way of classifying the methods used to process paper. There are three chlorine bleaching classifications.

Elemental Chlorine Free (ECF) - A process where paper is bleached with a chlorine compound, such as chlorine dioxide. This manufacturing process meets all the regulatory requirements of the US environmental protection agency regarding effluent discharges for protection of the environment.

Process Chlorine Free (PCF) - A process where recycled-content paper is bleached without the use of any chlorine or chlorine derivatives. The term is only used with recycled manufacturing facilities.

Total Chlorine Free (TCF) - A process where virgin paper is manufactured and bleached without the use of any chlorine or chlorine compounds. The term is used only with virgin pulp and paper manufacturing facilities.

Compostable

Materials that are able to be composted or able to biodegrade in warm, moist conditions with oxygen and bacteria in a period of several weeks to several months.

Comprehensive Procurement Guidelines (CPG)

A US environmental protection agency guideline that promotes the use of materials recovered from solid wastes to ensure the inclusion of recycled materials in the manufacturing of new products. The guideline is a key component of the governments "buy recycled" initiative and is authorized by Congress.

EPA Compliant Paper Products

Paper products meeting the EPA Comprehensive Procurement Guidelines for recycled fiber content.

Green

General term that refers to environmentally friendly initiative and lifestyles, though the exact definition varies on whom you ask. It is important to find out what it means to your customers so you can address their needs appropriately.

Green Cleaning

Using environmentally friendly cleaning products that don't endanger you, other people, or the environment. The term also often includes the use of equipment that reduces the need for cleaning solutions and promotes healthy indoor air, the adoption of cleaning procedures that reduce exposure, and sometimes includes the use of recycled janitorial paper products meeting predetermined specifications such as the EPA Comprehensive Procurement Guidelines.

Greenhouse Gases (GHG)

Components of the atmosphere that contribute to the greenhouse effect, which is an increase of temperature that the earth experience when certain gases in the atmosphere trap energy from the sun-a likely contributor to global warming. Some GHG occur naturally in the atmosphere while others result from human activities such as burning fossil fuels. GHG include water vapor, carbon dioxide, methane, nitrous oxide and ozone.

Green Washing

The act of a company, government, or other organization spending money or more time on promoting perception of being green, rather than spending resources on environmentally sound practices.

Leadership in Energy and Environmental Design (LEED)

The green building rating system developed by the US Green Building Council provides standards for environmentally sustainable design and construction. Buildings meeting the requirements of these standards can be LEED certified.

Mill Broke

Any paper waste generated in a paper mill prior to completion of the paper making process, up to and including the re-winder, slitter, sheeter, or coater at the end of the paper machine. It is usually returned directly to the pulping process. Mill broke is excluded from the definition of "recovered fiber".

Non-Governmental Organization (NGO)

A private institution that is independent of the government, and pursues particular social objectives or serves particular constituencies. NGO activities range from research, information distribution, training, logical organization, and community service to legal advocacy, lobbying for legislative change, and civil disobedience. Some non-profit organizations that issues seals or certifications for environmental products, like Green Seal or Environmental Choice, are sometime classified as environmental NGO's.

Natural Resource

Produced by nature, or naturally occurring.

Old Growth Trees

Trees that have reached significant age and have experience little or no direct disruption by humans.

Post-Consumer Fiber

A fiber that has served its intended use, having completed its life as a consumer item, and has been diverted or recovered from the solid waste stream. Paper recovered from curbside collections is considered to be a post-consumer.

Pre-Consumer Fiber

A mill or manufacturing scrap, obsolete inventory, plant converting or printing waste, etc., that has been captured during a production process and returned inventory from whole sales, merchants, converters, etc.

Recovered Materials Advisory Notices (RMANs)

Published by US Environmental Protection Agency to provide recommendation to government procurement agencies regarding the purchase of recycle content products. The RMAN contains recommended recycled content ranges for different product categories including, but not limited to, towels, napkins, bath tissue, and wipers.

Recycle

The reprocessing of recovered materials into new products.

Reduce

The act of using less of a product in order to limit the impact on the environment. Companies often reduce raw material needs, water usage, energy usage, air emissions and waste at the source.

Renewable Material

A natural resource that can replenish over time. It is normally considered to be a material that is replenished by natural processes at a rate comparable to its rate of consumption. For example, wood fiber (trees) is a renewable resource.

Reuse

Reusing products or by products from processes, either for the same function or for completely new functions (as when ash from a power boiler is used in roads).

Source Reduction

Refers to any change in the design, manufacturer, purchase, delivery or use of materials or products (including packaging) to reduce the amount of natural resources used or the toxicity of the materials before they become municipal solid waste.

Sustainable Forestry Initiative (SFI)

SFI is a fully independent organization. It was originally created by members of the American Forest and Paper Organizations and designed to certify forests to ensure they are being managed in a sustainable manner. SFI is the only forest certification program that includes a standard that applies to those who own land as well as those who procure wood from suppliers or landowners. SFI proactively works with family-owned forest.

Sustainability

Although multiple definitions, the term generally refers to processes that meet the need of the present without compromising the ability of future generations to meet their own needs, including critical aspects of corporate responsibility-environmental, social and economic.

Sustainable Forestry

A forest management practice that sets very broad social, economic and environmental goals in order to strike a balance between societies increasing demands for forest products and benefits, and the preservation of forest health and diversity.

US Environmental Protection Agency (EPA)

A government agency that provides funding, research, education and assessment efforts in support of environmental science. It also develops and enforces environmental regulations pursuant to laws enacted by Congress. Its mission is to protect human health and the environment.

US Green Building Council (USGBC)

A non-profit organization devoted to creating standards intended to ship the building industry towards improved sustainability by targeting how buildings are designed, built and operated.

LEED-EBOM & CIMS-GB: What's the Connection?

To understand green cleaning, one must first understand the value of a healthy building. Can one assert a facility can also be determined healthy? With this question in mind, can a facility be healthy, unless it is determined clean? Further, can a building be clean without the proper management structure and environmental policies in place to maintain its assets? This table addresses these questions and relates how ISSA's Cleaning Industry Management Standard (CIMS) Green Building (GB) criteria works in concert with the U.S. Green Building Council's LEED for Existing Buildings: Operations & Maintenance (LEED-EBOM) Green Building Rating System.

LEED-EBOM	CIMS & CIMS-GB
DEFINITION	
LEED-EBOM is a set of performance standards for certifying the operations and maintenance of existing commercial or institutional buildings and high-rise residential buildings of all sizes, both public and private.	CIMS defines management, operational performance, system, process and performance measure requirements for both building service contractors and organizations that self-perform cleaning.
OBJECTIVES	
LEED-EBOM encourages owners and operators of existing buildings to implement sustainable practices and reduce environmental impacts of their buildings over their functional life cycles. LEED-EBOM promotes high performance, healthful, durable, affordable, and environmentally sound practices in existing buildings.	CIMS encourages cleaning organizations to implement management best-practices to ensure a thorough understanding of the customer's service requirements, and therefore deliver quality, sustainable service. CIMS-GB ensures that a cleaning organization utilizes environmentally preferable cleaning practices and products in line with LEED-EBOM.
STRUCTURE	
Prerequisites and credits in the LEED-EBOM system address seven topics: sustainable sites (SS); water efficiency (WE); energy and atmosphere (EA); materials and resources (MR); indoor environmental quality (IEQ); innovation in operations (IO); and regional priority (RP).	Compliance with CIMS-GB is dependent on dedication to quality and meeting customer requirements in six management principles: quality systems; service delivery; human resources; health, safety and environmental stewardship; management commitment; and green buildings.
CORRELATING CREDITS	
IEQ Credits: Green Cleaning: Purchase of Sustainable Cleaning Products and Materials; Sustainable Cleaning Equipment; Indoor Chemical and Pollutant Source Control; Indoor Integrated Pest Management. **MR Prerequisites:** Sustainable Purchasing Policy; Solid Waste Management Program. **SS Credit:** Integrated Pest Management, Erosion Control, and Landscape Management Plan.	• Requires a green cleaning policy – separate from CIMS general environmental policy – addressing how green cleaning practices will be utilized, managed, and evaluated. • Requires a dedicated green/high performance cleaning program that satisfies IEQ credits outlined in LEED-EBOM. • Requires the purchase of sustainable cleaning products and materials, satisfying specific IEQ and MR credits and prerequisites in LEED-EBOM. • Recommends provisions for chemical and pollutant source control. • Recommends an integrated pest management program to fulfill SS credits in LEED-EBOM.

Superior Cleaning from Spic & Span®, Comet®, Febreze® and Mr. Clean®

Proctor & Gamble® Dilution Control System

Spic & Span® Disinfecting All-Purpose Spray & Glass Cleaner
Powerful 3 in 1 formula helps improve cleaning productivity and simplifies cleaning while saves time in one easy step. Spic and Span replaces a glass cleaner, an all-purpose cleaner, and a disinfecting cleaner. Cleans stainless steel.

Comet® Disinfecting Bathroom Cleaner
Comet Disinfecting Bathroom Cleaner powers away tough soap scum and hard water stains without scrubbing, yet safely cleans most surfaces with a non-abrasive formula. Dissolves soap scum and disinfects in one step eliminating the need for multiple cleaners.

Febreze® Fabric Refresher
Febreze cleans away odors trapped in fabrics; It's not a 'cover-up' product. Proprietary cleaning system goes to the source of odors and eliminates them. Spray directly on fabrics until slightly damp. As it dries, odors disappear.

Mr. Clean® Finished Floor Cleaner
Excellent cleaning and shine preservation for a wide range of shiny finished floors including ceramic and vinyl tile, terrazzo, and varnished hardwood. Can be used as a versatile all purpose cleaner for walls, tables, countertops, restrooms, and a wide variety of other surfaces.

Procter & Gamble Comet® Cleaner w/Bleach

Bleaches many tough stains and cuts tough grease. Surfactant bleach formula has two short-chain surfactants that act like solvents to cut through grease and other soils. Its liquid chlorine bleach ingredient provides a wealth of well-known bleach benefits. In the kitchen it helps remove tough soils like that tacky grease on range hoods and bleaches food stains on countertops, tables, and cutting boards. Concentrate.

Dilution Ratios: Liquid Metric Conversion

What does it really mean when you see that a dilution is 1:64, 64:1 or so many ounces per gallon? The proper way to show a dilution is how many parts of the concentrated product (usually 1) are to be diluted to how many parts of the dilutant or extender (usually water or a solvent). As an example, 1-ounce to a gallon (128-ounces) would be 1:128, not 128:1.

To convert dilution ratios to ounces per gallon divide 128 (the number of ounces per gallon) by the dilution ratio. For example, for a dilution rate of 1:32, the ounces per gallon would be determined by the calculation: 128 – 32 = 4-ounces per gallon of water

If given the ounces per gallon, calculate the dilution rate by dividing the concentrate ounce per gallon into 128. For example, if a product dilutes at 4-ounces per gallon, the calculation would be: 128 ÷ 4 = 32, or a dilution rate of 1:32.

One of the most common errors in figuring how much diluted product will result from a certain ratio is forgetting to add the amount of the concentrate to the total. For example, 1-ounce of a product diluted at 1:64 makes 65-ounces, not 64. This includes not only the 64-ounces of dilutant, but also the original 1-ounce of concentrate.

For metric conversion, here are some key equivalents:

Liter – 33.8-ounces, 1.057-quarts or 0.264-gallon

Gallon – 3.784-liters

Quart = 0.946-liter

Here is a chart for many of the most common dilutions:

Dilution Ratio Equivalents			
1:1	128 oz/gal	1:12	11 oz/gal
1:2	64 oz/gal	1:20	6 oz/gal
1:3	43 oz/gal	1:32	4 oz/gal
1:4	32 oz/gal	1:40	3 oz/gal
1:5	26 oz/gal	1:64	2 oz/gal
1:6	21 oz/gal	1:118	1 oz/gal
1:8	16 oz/gal	1:256	1/2 oz/gal
1:10	13 oz/gal	1:512	1/4 oz/gal

Spartan Bloc-Aid® Drain & Sewer Cleaner

A bright red, ready-to-use, non-acid, liquid drain and sewer cleaner plus maintainer. A small amount of Bloc-Aid used regularly in free-flowing drains will help prevent common sludge build-ups of grease, fats, paper, tobacco, soap scum, toothpaste, etc., that cause drains to become slow and eventually cause clogs. Bloc-Aid does not contain corrosive acids. It is safe to use in garbage disposals, septic tanks and cesspools without harm to plumbing. The ready-to-use formula requires no mixing, simply pour into the drain.

Hygolet Hygomat™ Urinal Mat

Time in service monitor embedded in the mat indicates when it is time to change the mat. HygoMat™'s antimicrobial agent actually kills the odor-causing bacteria left in the mat. HygoMat™ has a slip resistant backing and is held to the floor with a strip of double-sided tape. Reduce labor and maintenance costs. Greatly reduces the need for constant mopping and deeper cleaning to remove urine odor and stains. Urine is pulled into and dispersed through the lower layer of the mat, leaving the surface dry and free from unsightly stains. Cleaner, dryer, fresher-smelling restrooms tell every user that you mean business when it comes to their safety and comfort.

Evaluating Disinfectant Cleaners

There are a wide variety of disinfectant cleaners available. Picking the right one depends on your individual needs. Here are some key points to consider:

- Use only a "Hospital Grade" EPA registered disinfectant. Retail products are often "General Use" and work on only a limited variety of common, easy to kill germs. Hospital Grade disinfectants are "broad spectrum" and effective against harder to kill germs. That is why Brady Industries only sells Hospital Grade disinfectants.

- Some germs, such as Norovirus, Tb and C. diff, are especially hard to kill and require stronger Hospital Grade disinfectants. To determine if a product meets a special need, simply check the label. The EPA requires registered disinfectants to list all of the germs that the product is effective against and how long it takes to kill them.

- Soil load is a primary consideration. Heavier soil loads require formulas with stronger cleaning capabilities. Surfaces with light to medium soil loads can use milder products. A simple way to determine the cleaning strength is by dilution ratio. Ready-to-use (RTU) products are the strongest cleaners, products that are diluted 64:1 (2oz/gal) are medium duty cleaners and products diluted to 128:1 (1oz/gal) or more are light duty cleaners.

- Disinfectant cleaners can be evaluated by comparing the amount of active ingredients in them after they are diluted. This is expressed as "parts per million (ppm) in use". The active ingredients are listed by percent on the label. To determine the ppm in use, simply follow this formula:

$$\frac{\text{total \% active ingredients} \times 10,000}{\text{dilution ratio}}$$

Here are some examples:

Product	Formula	PPM
Brady #16 Healthcare 256 *High Dilution pH Neutral* *16.9% actives, 256:1*	$\frac{16.9\% \times 10,000}{256}$	660
Brady Lemon Disinfectant *Multi-purpose pH Neutral* *4.23% actives, 64:1*	$\frac{4.23\% \times 10,000}{64}$	661
Brady Non Acid Disinfectant *Powerful broader spectrum* *0.21% actives, RTU*	$\frac{21\% \times 10,000}{1}$	2,100

There are other considerations when choosing a disinfectant cleaner, such as type of active ingredients, safety profiles and of course, cost in use. For personal assistance with matching the right product for your needs, contact your local Brady representative.

Spartan Sani-Tyze Food Contact Surface Sanitizer

A ready-to-use quaternary based cleaner, sanitizer and deodorizer. It is formulated and packaged for maximum economy and convenience wherever food is processed, prepared, served or eaten. Will not negatively alter or compromise an efficient food service sanitation program. The formula is clear and will not stain surfaces. Leaves no grit or soap scum. The Sani-Tyze formula is a quat-alcohol blend, which provides light cleaning in addition to its ability to sanitize food contact surfaces. Can be used as a light-duty cleaner on any multi-touch surface such as refrigerators, drinking fountains, ice machines, and cash registers. Also an effective deodorizer because it stops the growth of bacteria that can cause odors. EPA Registration No. 10324-107-5741.

Spartan Rinse Free Floor Stripper

An efficient stripping compound formulated to substantially reduce time and labor costs by eliminating the need to rinse as well as the need to machine agitate. The Rinse Free Strip formula contains water-miscible organic solvents which quickly penetrate and liquify multiple layers of floor finish, wax, and water-base seals. This combination of solvents provides complete evaporation of any residue which remains on the floor after pick up. Leaves stripped flooring neutral and free of residue without rinsing. Rinse Free Strip has low foaming characteristics and will quickly penetrate and re-emulsify multiple layers of finish, wax, and water-base seals, thus enabling the use of automatic scrubbers for floor stripping.

Spartan CX3 Bio-Assist® Extraction Carpet Cleaner

CX3 Bio-Assist extraction carpet cleaner features a revolutionary safe and natural approach to cleaning carpet. This product does not utilize the typical solvents and phosphates for cleaning, but rather relies on a superior detergent system coupled with the digestive power of the Consume™ bacteria. These non-pathogenic microorganisms provide an environmentally sound process with which residual odors and soils can be eliminated. It is nature's way of cleaning. CX3 Bio-assist utilizes low-foaming detergents that dry to a non-tacky powder, so it will not contribute to carpet resoiling. It contains no optical brighteners that can distort colors and is safe for use on 5th generation carpeting due to its detergent system and mild pH. CX3 Bio-assist works with both hot and cold water leaving the carpeting clean, soft and with a subtle springtime fresh fragrance.

Carpet Care Tips

General Spotting Rules

Identify stain and use appropriate spotter(s). If stain cannot be identified, use General Purpose Spotter. If stain remains, use Paint, Oil, and Grease Spotter Gel or Citrus Gel. Follow with a thorough rinsing so no cleaner residue is left in carpet.

Difficult Spots and Stains

Asphalt Tracking: Vacuum thoroughly before applying diluted HD Prespray. Agitate with a carpet rake, extractor or brush and let sit for 10 minutes to loosen soils. Extract according to directions. Dry carpets as quickly as possible.

Reoccurring Spots

This occurs because excessive soil or detergent from spotter remains in carpet. Remove by recleaning with appropriate spotter, rinse until thoroughly clean and blot dry.

Preventing Reoccurring Spots from Wicking

- When spotting, be sure to blot until all of the liquid is removed.
- Dry the carpet as quick as possible using carpet fans or some type of air mover.
- Use a carpet rake. Depending on the thickness of the pile of the carpet, using a carpet rake can decrease drying time by at least 30 percent.
- Do not over wet the carpet.

Spartan Consume® Micro-Muscle® Surfactant

Consume Micro-Muscle is an industrial strength super surfactant concentrate boosted with active microbial grease digesters. Engineered to quickly remove everyday, routine petroleum based soils (such as motor oil, hydraulic fluid, lithium grease, lubricant oils, stamping oils, etc.) and continually control nuisance odors and augment downstream waste treatment. Micro-Muscle's multiple strains of natural microorganisms continue to clean, degrease and control bad odors long after initial application. The end result of cleaning with Micro-Muscle is a cleaner, fresher environment that maintains itself between scheduled maintenance. These same microorganisms also keep drains and pipes free-flowing, assisting in the efficiency of pre-treatment systems of downstream wastewater. Micro-Muscle contains no butyl, no bleach, no ammonia and no harsh detergents.

Spartan Stainless Steel Cleaner/Polish

A foamy, white emulsion formula, specifically for use on stainless steel, chrome, and other non-porous washable surfaces. Quickly removes fingerprints, grease, oil, coffee and food spills, ink and even built-up grime, leaving soft, non-greasy protective finish which resists fingerprinting, stains, and watermarks. A special silicone resin has been incorporated specifically for its ability to provide a protective coating after air-curing only one hour. A few turns of the cloth provides a soft, non-greasy protective satin finish that resists fingerprinting, stains and watermarks. It is important to note that repeated use will not cause build-ups, which detract from the natural luster of stainless steel surfaces.

WD-40® Lubricant

Protects metal from rust and corrosion, penetrates stuck parts, displaces moisture, and lubricates just about anything. WD-40 is also great when it comes to cleaning grease, grime, and other marks from most surfaces. Cleans by getting under dirt, grime and grease. Also dissolves adhesives, allowing easy removal of labels, tape, stickers, and excess bonding material. Because WD-40 displaces moisture, it quickly dries out electrical systems to eliminate moisture-induced short circuits. Loosens rust-to-metal bonds and frees stuck, frozen or rusted metal parts. Lubricating ingredients are widely dispersed and hold firmly to all moving parts. Protects metal surfaces with corrosion-resistant ingredients to shield against moisture and other corrosive elements.

Benefits of Microfiber

Independant studies prove effectiveness with Micro-Fiber Mopping Systems

One study, published by the EPA, shows how the microscopic size of microfibers permits them to clean better, since they can reach into the tiny pockets in flooring surfaces and "grab" soils.

Selecting the Right Wet Mop

Looped-End Mop vs. Cut-End Mop

Longevity

- Looped-end mops outlast cut-end mops 8 to 1.
- Looped-end mops are designed to withstand repeated laundering.

Performance

- Tail banded looped-end mops cover more space in one pass than a cut-end mop.
- Looped-end mops help eliminate snagging, fraying, and linting.
- Looped-end wet mops can be laundered, cut-end wet mops cannot be laundered.

Price and Total Cost

- Looped-end mops cost more to buy, but are far less expensive to use than cut-end mops when you factor in longevity and productivity.
- If you cannot launder mops or prefer a disposable approach to your mopping program, use cut-end mops.

Productivity, Mop Size & Staff

Larger Mop Size, Greater Coverage*

- Productivity rates based on looped-end mop, damp mopping with a single bucket.

Balance Productivity and Staff

- What size mop can your staff safely work with?
- Assess the physical ability and stature of your staff to help select the right sized mop.

The Greenest Thing You Can Do Is Just Clean Properly

Construct a cleaning program that incorporates process, equipment, and chemical, and you end up with a program that achieves the true objectives of green cleaning.

By constructing a program that focuses on preventative and daily and interim maintenance, you will reduce dependence on restorative programs to maintain the appearance of the flooring, reducing the amount of resources needed. It will also allow you to implement a green program without having to spend more money, since in most cases all that is needed is a simple re-allocation of existing budget and resources. This approach is environmentally-friendly and budget conscious.

Square Scrub EBG-20 Floor Machine

Has the ability to dry scrub several layers of finish off the floor without water or chemical involved. The Square Scrub uses the DP2310 3M® SPP floor preparation pad which allows this product to be considered ''planet friendly'' and this new method of floor preparation can eliminate up to 95% of your chemical stripping needs. Since most of the Square Scrub's process is completed dry and can be cleaned up with a dry vacuum, little water is used, therefore following the ''green'' stamp of approval. At only 62 dB, operators of this machine will be able to work throughout the day and not bother any surrounding occupants of the structure being worked on. The Square Scrub can prepare up to 1,600 square feet of flooring an hour in normal conditions with an experienced operator. One year limited warranty, and a two year limited motor warranty.

Overall Better Results With Less Cost - In Less Time!

KaiVac 1750 No-Touch Cleaning® System

The KaiVac® 1700 series combines high capacity and compact size with an attractive price to deliver exceptional value. Plus, they feature a removable "black box" engine compartment for rapid repair and exchange.

Kaivac's science-based No-Touch Cleaning systems are designed from the start to remove the maximum amount of bio-pollution. They combine automatic chemical metering and injection, an indoor pressure washer and a powerful wet vacuum into an integrated system. Empowering workers to hygienically clean without touching contaminated surfaces, they not only clean better, but also cut labor, chemical and equipment costs while raising worker morale and image.

Kaivac 1750 No-Touch Cleaning System

The KaiVac 1750 has been confirmed as a Sanitizing Device (EPA Est No. 71665-OH-2) by an independent EPA-certified lab when used as directed without chemicals because they reduce more than 99.9% of targeted microbes on a surface. The high-pressure spray effortlessly washes away soils, bacteria and other bio-pollution that other cleaning methods leave behind, leaving fixtures, floors and walls sparkling clean. The reliable and powerful three-stage vacuum motors efficiently remove all soils, bacteria and cleaning solution, leaving floors clean, dry, free from bio-contaminants and ready for immediate use. Quiet operation perfect for round-the-clock cleaning in noise sensitive areas like hospitals and nursing homes. All KaiVacs include HEPA filtration on wet or dry vacuum exhaust for optimum indoor air quality. Plus, the 300 mph HEPA filtered blower allows you to effortlessly and instantly dry fixtures or dust high areas.

Spartan Clothesline Fresh™ BLD

Combines a laundry builder with a detergent to increase pH and remove soil all in one step. The elevated pH speeds up soil removal during washing by allowing the individual fibers of a fabric to open up, which expedites entrapped soil release. A highly alkaline product that also contains water softening and soil anti-redeposition agents to aid in the washing process.

Spartan Clothesline Fresh™ Laundry Detergent

A contemporary approach to laundry. Can be used with a complete laundry program or on its own. This product was formulated to contain new advances in chemical surfactants and cleaning technology to provide a deep cleaning formula. Enhanced by patented polymeric technology. This technology quickly suspends tough oily and particulate soils to prevent them from redepositing back onto the fabric.

An Environmental Approach to Laundry: The Benefits of Clothesline Fresh™

Spartan® Clothesline Fresh™

Clothesline Fresh Laundry can be used by anyone who desires quality, environmentally preferable laundry products that excel in most types of water conditions. Clothesline Fresh Laundry contains award-winning green surfactant technology and biodegradable water softeners not found in competitor formulations.

High Efficiency Formulations
- Use high efficiency equipment.
- Automatic dispensing.
- Cool and cold-water temperatures.
- Decreases wash cycle time.
- Increase use of ozone injection systems.

Combine these sustainable choices with other smart laundry practices such as:
- Proper collection and handling
- Sorting
- Pre-spotting
- Tailor chemical usage

Sustainable Support Characteristics
- All surfactants used in Clothesline Fresh are on DfE's (Design for the Environment) CleanGredients list (a program of the EPA)
- Readily biodegradable.
- Biobased surfactants are used whenever possible and when petroleum derived surfactants are used; they are readily biodegradable as well.
- Biobased surfactants are derived from soy, corn, and coconut oil.
- Formulated with the EPA's Presidential Green Chemistry Challenge award winning chelants.
- Polymeric chelase and anti-encrustation aids entirely derived from chicory root.
- Natural biobased acids as neutralization aides (citric acid).
- Readily biodegradable bleaching aides (hydrogen peroxide).

Clothesline Fresh Products Contain:
- No Alkylphenol Ethoxylates
- No Nitrilotriacetic Acid (NTA)
- No Harsh Solvents
- No Toxic or Persistent Components or By-products
- No or low VOX's
- No Phosphates
- No Silicates
- No Ozone Depleting Chemicals

Spartan Clothesline Fresh™ Enzyme Spotter

Unique enzymatic activity allows for quick penetration, digestion, and removal of the toughest stains and soils. Utilizing this product as part of a complete laundry care line will reduce rewash and increase linen life. The proprietary blend of enzymes allows for the quick removal of many types of stains, particularly protein, starch, and manann gum based stains. Examples of protein stains are blood, egg, grass, dairy products, and bodily fluids. Examples of starch based stains include pasta and fruit stains, sugar based stains, sauces, baseball and tennis court red clay. Manann Gums are associative type thickeners and stabilizers that are found in thousands of products. Manann gums provide tackiness that often results in staining when deposited onto clothing; use this product to attack these staining situations. Will not contribute to fabric degradation on most fabrics.

Pellerin Milnor M50V Dryers

The Advanced Phase 7 control has an optional Fire Suppression System, which can sense high heat conditions caused by overheating or spontaneous combustion. The M50 has a heat input of 150,000 btu per hour. $32\frac{3}{4}$'' diameter basket allows free tumbling and better exposure to hot air for fast drying. Advanced microprocessor control is easy-to-use. Automatic drying avoids wasting energy on loads that are already dry. Surprisingly, these dryers are more compact than other dryers. They install close to the wall because there's little to service from the rear of the machine. The cabinet is electrostatically painted inside and out, and all components are painted before assembly for thorough protection.

Inteplast EP Series Pallet Stretch Film

High performance machine wrap features: high tensile strength and elongation, excellent puncture and tear resistance, excellent holding force and stretch memory, more compressive force for tighter load holding, will perform consistently at higher stretch levels, and is suitable for a wide range of applications. AmTopp wrap is a superior quality linear low-density stretch wrap. It's three layer, co-extruded design allows for excellent strength, puncture resistance, and characteristics are consistent on all load types, even at -20°F. This consistency in quality is attributed to the finest and most advanced equipment and technology in the world. Automation, computerization, and robotics maximize efficiency and ensure the output of superior products.

Unique 100% polypropylene ridged construction effectively removes and traps dirt and moisture. Exclusive rubber reinforced face nubs prevent pile from crushing, extending the life of the product. Certified slip-resistant by the National Floor Safety Institute. Available with cleated backing for installations on carpeted surfaces or smooth backing for use on hard surfaces. Exclusive ''Water Dam'' allows the Waterhog mat to hold up to 1½ gallons of water per square yard; water and dirt stay on the mat. Some styles available with the dam for outside use, so water can drain easily. Anti-static. Green-friendly rubber backing has 15 to 20% recycled content.

Tri-Grip™ Floor Mats

Heavy, 100% static dissipative nylon face offers outstanding absorption and durability. Tight, heat-set, Ultra-Twist yarn construction resists packing and crushing. Dirt filters into the mat face rather than remaining on the top. Molded rubber backing resists curling and cracking in all types of weather. Also available with oil and grease resistant 100% nitrile rubber backing when applications call for additional protection.

Comfort Flow Anti-Fatigue Mat

Lighter in weight for easier handling. Fully launderable mat that performs great as an anti-fatigue mat and as a flow-through mat in wet or dry environments. Constructed of 100% high density closed cell nitrile rubber cushion which is far superior in grease and oil resistance than other ''grease proof'' mats. Provides excellent anti-fatigue properties for added employee comfort and improved ergonomics. Low profile, 3/8'' thick, and slip-resistant surface reduces slip and fall accidents. Non-skid backing keeps mat in place. Anti-microbial treatment guards against degradation from micro-organisms and minimizes mats being a source of odors.

Microns to Mils Table and Formulas

Microns to Mils Conversion Formula

Divide the microns by 25.4 to arrive at Mil thickness.

Example:

10 Microns ÷ 25.4 = .39 Mil

24 Microns ÷ 25.4 = .94 Mil

Mils to Microns Formula

Multiply the mils by 25.4 to arrive at mil thickness.

Example:

1 Mil = 25.4 Microns

.30 Mil x 25.4 = 7.6 Microns

.65 Mil x 25.4 = 16.5 Microns

Get the Right Size Can Liner

Liners are made to fit every container. A liner too large wastes money. A liner too small increases labor costs.

Here's how to measure for the correct liner size:

Bag Width

Use 1/2 of the outer circumference of the container.

Bag Length

Use the height of the container, plus 1/2 of the diameter of the container bottom, plus 3" (for overhang). For square or rectangular containers use the diagonal of the container bottom rather than the diameter

CREDIT AGREEMENT: All goods and/or services sold to Applicant are sold and purchased pursuant to the terms and conditions set forth on the front and back of Brady Industries printed invoices. In the event of a conflict between the terms and conditions on the invoices and those in this Agreement, the provision most favorable to Brady Industries shall be controlling. It is specifically agreed that any past due balance shall be paid by Applicant or by Guarantor(s) at Brady Industries Credit Department in Las Vegas, Nevada.

CERTIFICATIONS AND NOTICES: I/We certify that everything stated on this Application, and/or attachment is true to the best of my/our knowledge. All goods and/or services invoiced to Applicant by Brady Industries shall be sold in reliance upon the information contained in, or attached to, this document. Notice of any change which would in any way affect Applicant's or Guarantor's liability to Brady Industries must be given to Brady Industries in writing by certified mail return receipt requested, addressed to Brady Industries, 7055 Lindell Road, Las Vegas, Nevada 89118; Attention: Credit Department.

WAIVER OF CONFIDENTIALITY: Applicant agrees to provide Brady Industries with current financial statements as requested. Applicant gives its permission to Brady Industries to verify and/or supplement the information stated hereon and to make inquiry with the credit references listed on this form. Applicant further authorizes Brady Industries to obtain credit and financial information concerning the Applicant at any time, before or after credit is extended, from any source, including but not limited to any financial institutions where the Applicant does business, Applicant's suppliers, and from any credit reporting bureau or agency.

PAYMENT TERMS: The terms of payment applicable to this Account are Seller's regular terms or those specifically quoted in writing. All payments are due 30 Days following the date of the invoice and deemed past due after 30 days. All accounts over thirty (30) days past due will be subject to a 1.5% monthly interest charge on the past due balance.

DEFAULT and ENFORCEMENT OF ACTIONS: Brady Industries in the event of a default in payment of Applicant's account with Brady Industries shall be entitled to: (i) interest charges in the amount of 1.5% per month on past due balances; (ii) reasonable attorney's fees plus other normal litigation costs; and (iii) in the event of assignment to a collection agency, debtor will pay actual collection fees charged by collection agency to Brady Industries. Any action to collect past due balances or to enforce the Personal Guaranty, shall at Brady Industries option be filed in the City of Las Vegas Municipal Court, Clark County Eighth Judicial District Court, or in the Federal District Court of Nevada. In the event of a default in payment of Applicant's account with Brady Industries, Brady Industries may institute legal action to enforce mechanic's lien, stop fees, and costs incurred as a result of such legal action. Such costs and fees may be added to Applicant's account either during the litigation or at the conclusion of the litigation.

TRANSMISSION: This document may be executed and transmitted via facsimile machine, electronic mail, or scanner. Both sides of this Application must be transmitted. The facsimile, electronic mail, or scanned document so transmitted to Brady Industries shall be deemed an original, and all terms and conditions will apply as if the original were transmitted, and shall be binding upon the undersigned upon receipt by Brady Industries.

APPLICATION IS NOT AGREEMENT TO EXTEND CREDIT. By completing this Application, Brady Industries is not agreeing to extend credit to Applicant, but is considering whether to allow Applicant to purchase on an open account from Brady Industries.

TERMINATION OF CREDIT ACCOUNT: Applicant understands and agrees that Brady Industries has no obligation to extend credit to Applicant and that Brady Industries, in its sole and absolute discretion, may terminate the extension of any account accommodations or credit to Applicant at any time for any reason or for no reason whatsoever.

MISCELLANEOUS: This Credit Application will be governed by the laws of the State of Nevada. Customer hereby acknowledges the receipt of a copy of this Agreement at the time of its execution.
