Develop Facility, Safety and Regulatory Compliance Programs & Procedures

Brady offers five distinctive engineering audit and procedure development services that produce fast, complete and cost-effective safety and compliance solutions for your facility.

1. Graphical Lockout Procedure Service

Brady professional engineers create visually instructive, machine-specific lockout procedures that reduce the time it takes to safely, quickly and consistently lock out equipment.

2. Facility Marking Audit & Assesment

A Brady project manager inspects your facility, assesses your current safety signage identification program and composes a comprehensive report providing corrective actions and a complete list of required and recommended ID signs and labels.

3. Slips / Trips / Falls Audit & Assesment

Brady engineers perform a complete audit of your facilities, document and summarize recommended steps to minimize S/T/F concerns and provide a written program that includes facility inspection and employee training elements.

4. Graphical Confined Space Procedure Service

DANGER
CONFINED SPACE
ENTER BY
PERMIT ONLY

Brady engineers create visually instructive confined space procedures. We develop procedural checklists, detail required equipment and safety devices, identify potential hazards, document methods to protect workers and verifications of hazard elimination.

5. Graphical Preventive Maintenance Procedure Service

Brady project managers create visually instructive, comprehensive instructions for the maintenance and care of your machinery. We develop procedural checklists, detailed instructions augmented with graphical images or line drawings, establish the required frequency of PM, the parts needed and lubricants to use.

Sustain Your Gains from Lean Manufacturing

Equipment Reliability Made Visual

Visual Workplace is a lean concept that emphasizes putting critical information at the point of use. Visual devices play a critical role in many of the most popular lean techniques, such as 5S, Standard Work, Total Productive Maintenance, etc. In fact, Visual Workplace serves as the key sustaining force for these initiatives, ensuring that lean improvements remain clearly visible, readily understood, and consistently adhered to long after the kaizen event is over.

Brady printing systems are essential tools for creating a visual workplace. Create your own custom signs, labels and tags onsite and on-demand... for a fraction of the cost of using an outside sign shop. Designed for industrial use, labels printed on a Brady printer withstand harsh environments and stick to virtually any clean, dry surface.

About Safety Signs

ASME (ANSI Z535)

ASME (ANSI Z535) and the Occupational Safety and Health Administration (OSHA 1910.145) Specifications for Accident Prevention Signs require the use of Safety Signs to indicate and define specific hazards that, without identification, may lead to accidental injury to workers and/or the public or to property damage.

Danger

Indicates an immediate hazard; a hazard capable of producing irreversible damage or injury.

OSHA Standards

The Occupational Safety and Health Administration (OSHA) Federal Hazard Communication Standard 29 CFR 1910.1200 has become known as the "Right-To-Know" law. This standard gives both employers and employees a right-to-know about the hazardous chemicals they use in the workplace. It is designed to reduce the incidence of chemical source injury and illness in the workplace.

In order to accomplish this, employers are required to:

1. Have Material Safety Data Sheets (MSDS) on file for every hazardous chemical in the workplace available to all employees during their work shift.

2. Train employees about the potential hazards, how to identify and safely work with hazardous chemicals and the proper personal protection necessary when working with hazardous chemicals. Employees must be trained before they start a work assignment.

3. Identify and list all of the hazardous chemicals in the workplace.

4. Have a written hazard communication program available for employees, OSHA and outside contractors who enter the workplace.

5. Have labels on all hazardous chemical containers that:
   - List the name and address of the manufacturer
   - List the chemical name
   - List the type of potential hazard that exists
   - List the precautions necessary
   - List target organ information
   - Are easily related to the appropriate MSDS on file

6. Maintain reports, records and logs for the entire program.

7. Certain states require that you report all of this information to a state agency, department of labor, health department or fire department depending on the state law that is in effect.

Hard work is necessary to come into compliance with the law. Brady offers a wide variety of products to keep your work to a minimum, while enabling you to implement a complete program that will bring your company into compliance with the Hazard Communication Standard.

EntryTag®

Designed to work in conjunction with existing permit to work systems and assist with the requirements of CFR 1910.146 (c) (2), (d) (11) and (f) (2). ENTRYTAG® acts as a visual reminder to authorized personnel and assists in instructing non authorized personnel of the critical requirements contained within the permit to work. The system clearly states the minimum requirements of entry to the confined space or whether the area is in prohibition and cannot be entered.

BRADY® WHEN PERFORMANCE MATTERS MOST™

HOW DO YOU
CHOOSE A SORBENT?

Actually, start at the end, in the trash. One of the best ways to help you pick the right sorbent is too see what they look like when you're done with them. Take a look…

These sorbents are being used in a traffic area – choose a tough sorbent like **BattleMat™** or one of our HT to get durability and high absorbency.

Too much sorbent for the application. Save some money by choosing a medium or lightweight pad..

Not Enough Sorbent! Consider a heavyweight pad to increase performance and cut down on the number of lighter pads you go through everyday. Start with **MRO-100** it's our number one selling product for a reason!

Looks like this sorbent is containing a leak – consider using a **SOC** for containing leaky equipment. SPC offers a variety of SOCs to meet your needs.
DID YOU KNOW?

There is a negative financial impact of using clay to clean up your leaks, drips and spills. It may be cheaper to buy, but the benefits stop there. For example…let's say over the period of a month you clean up 40 gallons or just over a gallon a day. Here are the facts:*

- 40 gallons spilled = 10 bags of clay or 1.5 bales of SPC pads.
- 10 bags of clay cost roughly $50 and 1.5 bales of pads costs around $90.
- After you clean up a spill, clay takes up two to three times as many 55-gallon disposal drums than the pads do.
- Let's estimate the disposal costs at $350 per drum – making your final cost of using clay easily double the cost of using SPC sorbents.

Still not convinced… consider these points:
- OSHA considers silica a serious health hazard.
- Granular clean up is difficult and labor intensive.
- The small particles can easily enter and damage machinery or your finished product.
- Clay has limited chemical resistance.

* This is a basic analysis using estimations and averages. Individual situations may vary.
  Contact your Regional Sorbent Sales Manager to do a more in-depth and customized analysis of your costs.

Spill Prevention Control & Countermeasure (SPCC) Plan

EPA issued the final rule amending the SPCC under the authority of the Federal Water Pollution Control Act and this regulation became effective as of August 16, 2002.

What is an SPCC Plan?

An SPCC Plan is a facility-specific comprehensive description of a facility's containment and counter measures that would prevent an oil spill from occurring as well as procedures to respond and clean up an oil spill that does occur.

The SPCC plan addresses the following three areas:
- Operating procedures that prevent oil spills
- Control measures installed to prevent a spill from reaching the environment
- Countermeasures to contain, clean up, and mitigate the effects of an oil spill that reaches the environment

Why Lockout / Tagout

Why Lockout/Tagout?

OSHA Focus - #1 most cited violation for general industry

Best Practice - Being adopted across industries & geographies

Saves Lives - Prevents an est. 120 fatalities & 50,000 injuries annually

Cuts Costs - Significantly; both lost time and insurance costs

Improves Productivity - Minimizes equipment downtime

Step Plan
for creating an effective energy control program

(1) Create energy control policy and procedures

(2) Identify all energy control points

(3) Equip employees with the proper lockout tools and warning devices

(4) Train employees and promote awareness of safe work practices

Brady is the global leader in providing Lockout / Tagout solutions.

Brady was first to respond to the new OSHA legislation in 1990, and has maintained its position as the leading Lockout solutions provider ever since. Today, Brady offers a comprehensive package for Lockout / Tagout.

BRADY® WHEN PERFORMANCE MATTERS MOST™

Lockout / Tagout OSHA Regulations

OSHA 29 CFR §1910.147 The control of hazardous energy (lockout/tagout).

Scope, application and purpose

(1) Scope. (i) This standard covers the servicing and maintenance of machines and equipment in which the unexpected energization or start up of the machines or equipment, or release of stored energy could cause injury to employees. This standard establishes minimum performance requirements for the control of such hazardous energy.

(2) Application. (i) This standard applies to the control of energy during servicing and / or maintenance of machines and equipment.

(3) Purpose. (i) This section requires employers to establish a program and utilize procedures for affixing appropriate lockout devices or tagout devices to energy isolating devices, and to otherwise disable machines or equipment to prevent unexpected energization, start-up or release of stored energy in order to prevent injury to employees.

1910.147(c) OSHA Energy Control Policy; Synopsis of Requirements

An energy control policy must be documented and at a minimum should cover the following aspects of the program:

- Purpose and scope of the program
- Personnel authorized to perform LO/TO
- Enforcement policy
- Training methods
- Group lockout procedures
- Shift transfer procedures
- Lock removal procedures
- Method for auditing & updating procedures
- Coordination with outside contractors

1910.147(c)(4) Energy Control Procedures; Synopsis of Requirements

- Procedures must be documented and must identify the equipment covered.
- A separate procedure must be created for each piece of equipment to be locked out. There are exceptions where multiple machines may be grouped under a single procedure
- The procedure must include specific steps for shutting down, isolating, blocking and securing equipment to control hazardous energy
- Specific steps for the placement, removal and transfer of lockout/tagout devices should also be included
- The employer shall conduct and certify periodic inspections at least annually

1910.147(c)(5) OSHA Lockout Device Requirements

LOCKOUT DEVICES MUST:

- Be provided by the employer
- Be standardized by size, shape or color
- Be distinguishable from locks used for other purposes. Lockout locks should only be used for lockout!

- Identify the individual who applied the lock (both tags and lock labels are acceptable for this purpose)
- Be durable
- Be strong enough to prevent removal except by using excessive force
- Remain under the exclusive control of the individual who attached them.

1910.147(c)(5)(ii)(B) *Standardized.*

Lockout and tagout devices shall be standardized within the facility in at least one of the following criteria: Color; shape; or size; and additionally, in the case of tagout devices, print and format shall be standardized.

1910.147(c)(5)(ii)(A) *Durable.*

Lockout and tagout devices shall be capable of withstanding the environment to which they are exposed for the maximum period of time that exposure is expected.

Group Lock Boxes

HOW GROUP LOCKOUT WORKS:

When Larger numbers of workers or lockout points are involved, lock boxes can offer distinct advantages over hasps:
- Supervisor uses a single job lock on each energy control point to lock out equipment
- Keys for job locks are put in a lock box
- Each worker applies his/her own lock to the lock box. As long as any one worker's lock remains secured onto the lock box, the keys to the job locks cannot be accessed, and the energy isolating devices cannot be operated. Each employee retains exclusive control, as required by OSHA.

Portable Metal Lock Boxes
- Made of heavy duty steel, powder-coated for extra rust resistance
- 13 lock holes on lid, plus lockable clasp on front (locks not included)
- Standard lock box Holds up to 40 padlocks
