

## Standards and approvals

### Standards

In the field of safety engineering, rope pull switches belong to the category of “EMERGENCY-STOP devices with mechanical latching”. The required EMERGENCY-STOP function must be available and functional at all times irrespective of the operating mode. After operation of the actuating element, the EMERGENCY-STOP device must automatically prevent or reduce the hazard in the best possible way.

The following standards are specifically relevant in relation to rope pull switches:

- ▶ EN 60204-1 (Safety of machinery - Electrical equipment of machines - Part 1: General requirements)
- ▶ EN 60947-5-5 (Low-voltage switchgear and controlgear - Part 5-5: Control circuit devices and switching elements - Electrical emergency stop device with mechanical latching function)
- ▶ EN 418 (Design, color and arrangement of EMERGENCY-STOP actuating elements)

### Approvals

To demonstrate conformity, the Machinery Directive also includes the possibility of type examination. Although all relevant standards are taken into account during development, we have all our safety switches subjected to additional type examinations by a notified body.

Many of the safety switches listed in this catalog have been tested by an employers' liability insurance association (BG) and are given in the lists from the BG.

Furthermore, numerous switches are listed by Underwriters Laboratories (UL). These switches can be used in countries in which this listing is required. The approval symbols on the individual pages of the catalog indicate which body tested the switches.

With the aid of the approval symbols listed below you can quickly see which approvals are available for the related switches:

Switches with this symbol are approved by a German employers' liability insurance association (BG)

Switches with this symbol are approved by Canadian Standards Association (CSA, Canada and USA)

## Task of rope pull switches

The trip range is much larger than for switches with Emergency-Stop pushbutton, since operation is possible over the whole rope length and is not restricted to the small area within reach of the switch.

Rope pull switches are used whenever it is necessary to protect large danger areas where fitting of a housing or cover is not possible or too complex.

The advantage is that areas of an installation or machine can be shut down immediately from any point in the working area in the event of danger in cases where it would otherwise be necessary to install individual latched Emergency-Stop buttons at short distances apart.

## Function and technology used in rope pull switches

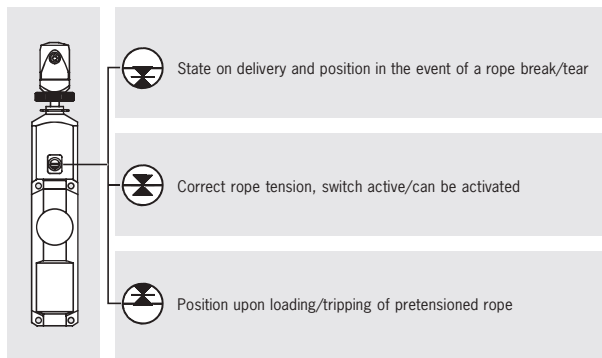

The standard EN 60947-5-5 - 6 (Requirements for EMERGENCY-STOP pushbuttons and rope pull switches) specifies certain requirements which must be met by rope pull switches and which therefore also define the mode of operation of such switches.

For example, the latching device (Emergency-Stop switch) must be reset by turning a key, turning the pushbutton in the specified direction or by a pulling movement. Rope pull switches are normally tripped by pulling a plastic-sheathed steel rope (known as the safety rope or pull rope). In addition, EUCHNER rope pull switches feature a latched Emergency-Stop button on the housing which has the same effect.

Upon tripping, the safety contacts are actuated and a stop signal is generated which switches off the machine. The vertical tensile force which acts on the wire or rope to generate the EMERGENCY-STOP signal (contact opening) must be less than 200 N and the vertical deflection of the wire or rope which is necessary for generation of the EMERGENCY-STOP signal must be less than 400 mm. An EMERGENCY-STOP signal must also be generated if the wire or rope breaks or becomes detached. This means that any fault in the safety device is noticed immediately and the safety function is not lost at any time.

In order to achieve this, the rope pull switch has one center position and two switch-off positions. The switch is in center position during machine operation. If the safety rope is pulled or tears, the switch moves from the center position to one of the switch-off positions and the machine is stopped. Rope pull switches from EUCHNER have a sight window which allows the switch position to be seen.

## Installation and rope attachment

### Installation

In accordance with EN 418 - 4.4, EMERGENCY-STOP actuating elements must be installed so that they can be reached easily and operated safely by persons who are at risk. It may be useful to attach marking flags to improve visibility if wires/wire ropes or ropes are used, as is the case with rope pull switches.

### Rope attachment

► Versions RPS...SC and RPS...PC

- 1 Strip the pull rope and insert into the terminal head. In order to prevent pull rope from slipping, there must be no rope coating in the clamping head.
- 2 Set the pull rope so that the lock marking is in central position and clamp the pull rope firmly with the hexagon socket screw.
- 3 Actuate the pull rope strongly several times in order to stretch the rope and then reset the rope by way of the clamping head.
- 4 Set the lock marking in central position by turning the actuation spindle.
- 5 Activate the rope pull switch by turning the Reset knob in the direction of the arrow (RPS...SC) or by pulling (RPS...PC).

The direction of the safety rope can be changed using rope pulley blocks or eye-bolts. Direction changes of up to max. 90° are possible. Rope pulley blocks have the advantage that the frictional forces between the safety rope and deflection points are kept low.

## Temperature dependence

When planning safety installations with rope pull switches, it is necessary to take into account the temperature dependence of the installation and the safety rope so that the switch is not tripped as a result of a change in temperature. To do this, the possible rope lengths must be determined and the trip point must be readjusted regularly. The following graph shows the relationship between rope length and temperature. Installation should take place at a temperature of 20 °C.

## Accessories for rope pull switches

- ▶ Eyebolt
- ▶ Rope set
- ▶ Pulley set
- ▶ Turnbuckle
- ▶ Tensioner spring
- ▶ Tensioning rope
- ▶ Built-in LED

### Built-in LED

The built-in LED is suitable for direct installation in one of the M20 x 1.5 threads of the three cable entries in the rope pull switch RPS. The built-in LED indicates to the operator whether the switch is actuated or not. The switching element can be wired individually. Operating voltage DC 24 V +10%, -15%.

### Switching element

| Parameter                           | Value                         |                       | Unit |
|-------------------------------------|-------------------------------|-----------------------|------|
| Switching principle                 | Slow-action switching element |                       |      |
| Switching elements                  | <b>2131</b>                   | <b>3131</b>           |      |
| With 4 contact elements             | 3 NC $\ominus$ + 1 NO         | 2 NC $\ominus$ + 2 NO |      |
| Contact opening gap                 | > 2 x 2 mm                    |                       |      |
| Switching current, min., at 24 V DC | 10                            |                       | mA   |

### Connection, cable entry M20 x 1.5

| Parameter  | Value          |   | Unit            |
|--|----------------|---|-----------------|
| Connection   | Screw terminal |   |                 |
| Version  | M20 x 1.5      |   |                 |
| Conductor cross-section  | 0.34 ... 1.5   |   | mm <sup>2</sup> |
| Rated insulation voltage U <sub>i</sub>                                  | 250            |   | V AC/DC         |
| Conventional thermal current I <sub>th</sub>                             | 10             |   | A               |
| Short circuit protection according to IEC 60269-1 (control circuit fuse) | 10             |   | A gL            |
| Utilization category according to IEC 60947-5-1                          | AC-15          | I <sub>e</sub> 4 A U <sub>e</sub> 230 V |                 |

## Accessories for rope pull switches RPS

### Rope pull spring

| Parameter              | Value                        |                  | Unit |
|------------------------|------------------------------|------------------|------|
| Material of rope clamp | Die-cast zinc/steel          |                  |      |
| Material of spring     | X12CrNi177 (1.4310)          |                  |      |
| Eye-bolt               | DIN 444 M12x50-4.6 Zn        |                  |      |
| Ambient temperature    | -25 ... +70                  |                  | °C   |
| Rope diameter          | 2 ... 5                      |                  | mm   |
| Rope attachment        | Quick-action clamping device |                  |      |
|                        | <b>RPS-W-100/175</b>         | <b>RPS-W-300</b> |      |
| Spring rate            | 2.1                          | 1.9              | N/mm |
| Maximum spring force   | 218                          | 335              | N    |
| Weight                 | approx. 0.5                  | approx. 0.55     | kg   |

### Built-in LED

| Parameter   | Value                     |  | Unit |
|---|---------------------------|--|------|
| Material of housing                               | ABS/PC blend, black       |  |      |
| Material of cap                                   | Transparent polycarbonate |  |      |
| Degree of protection (fitted in rope pull switch) | IP 65                     |  |      |
| Ambient temperature                               | -20 ... +50               |  | °C   |
| Connection  | 2 wires                   |  |      |
| Mounting  | M20 x 1.5                 |  |      |
| Operating voltage                                 | 24                        |  | V DC |
| Switch-on current                                 | < 0.5                     |  | A    |
| Current consumption                               | 45                        |  | mA   |
