Motor Protection

Reactors help to protect motors from the high peak voltages and fast rise times (dv/dt) which can be experienced in IGBT inverter applications when the distance between the inverter and motor is long.

Harmonic Reduction

Because all standard GE Line/Load reactors are compensated for harmonics (current and frequency), they are extremely effective at reducing the amount of harmonics which are produced by a drive/inverter. Use 5% impedance, harmonic compensated reactors for best reaction of harmonic distortion.

Voltage Spike Protection

A 3% impedance reactor is very effective at protecting against damage to or nuisance tripping of AC voltage source inverters, due to voltage spikes.

Voltage spikes on the AC power lines cause elevation of the DC Bus voltage which may cause the inverter to "trip-off" and indicate an over-voltage protection condition. Use reactors to absorb these line spikes and offer protection to the rectifiers and DC Bus capacitors while minimizing nuisance tripping of the inverter.

Cabinet Product Number	List Price GO-52	NEMA 1 Enclosure Style	Type	W	H	D	Wgt (lbs.)
37GCAB8	\$146.00	CAB-8	Wall Mount	8	8	6	7

Outline Dimensions

Exact terminal configuration may be different than shown. For exact terminal configuration contact factory for outline drawing.

Agency Approvals

- GE line reactors are UL recognized.
- All UL approvals are for USA and Canada.
- UL-506 File #E191687 (1 amp-1200 amps)
- UL-508 File #E191686 (1 amp-1200 amps)
- All higher currents offer UL recognized insulation systems and construction.
- CE Marked

NEMA 1 Cabinets

All GE Line/Load Reactors are available as either open type or in a NEMA Type 1 general purpose enclosure. To order a reactor mounted in a cabinet simply change the second to last digit of the product number from "0" to "1". Example 37G 00802 becomes 37G 00812.

Consult Factory

For Input or Output of Adjustable Speed Drive/Inverter Systems

*For higher or lower current ratings, consult factory.

*For other voltages or frequencies, consult factory. Single phase reactors are also available, consult factory for proper selection.

This table is suitable for selection of both input and output reactors because their harmonic compensation and IGBT protection allow them to be used in either application. Specific current and inductance ratings are indicated on next page. Consult factory for any special applications (higher current, motor rating different than controller rating, etc.)

Select GE Line/Load reactors based upon motor horsepower, (or kilowatts) and voltage. Verify that the motor full load ampere rating is within the fundamental current rating of the reactor, and the drive/inverter rating is within the maximum continuous rating of the reactor (See next page).

Publications and Reference: See Section 22 for a complete list of additional product-related publications

Matrix Harmonic filters provide broadband reduction of harmonics. Matrix Harmonic Filters not only offer better performance over other broad band filtering and 18-pulse harmonic reduction techniques, they are also suitable for a wider range of applications. Matrix Harmonic Filters can be installed in either variable or constant torque drive applications and can be applied on either diode or SCR rectifiers. For any application other than variable torque applications, it is suggested that you contact the factory for filter selection.

Typical Applications

Use Matrix Harmonic filters to minimize harmonic current distortion in these and other 6-pulse rectifier applications:

- Fans and Pumps
- Water Treatment Facilities
- HVAC Systems
- AC or DC Motor Drives
- Rectifier type welders
- Induction Heating Equipment
- UPS Equipment
- Elevators

Matrix Filter enables most AC drive systems to comply with the voltage and current distortion limits outlined in IEEE 519. A complete harmonic analysis and product selection tool is available on the internet. Go to geelectrical.com and select Products, select Capacitors, choose Matrix Harmonic Filter and then select Energy Savings Calculator and Harmonic Estimator.

Matrix Harmonic Filters are multi-stage low pass filters specially configured to avoid the attraction of harmonics from other sources on a shared power system. Matrix filters will not cause power system resonance. However, the configuration of the filter requires that only drives or equivalent loads be loaded on the output of a Matrix harmonic filter. One filter can be used with multiple drives. However, if there is a drive bypass circuit, there must be one filter per drive and the filter and drive combination must be bypassed.

Matrix Harmonic Filters are available in a NEMA 1, NEMA 3R or as a modular design preassembled onto panels for subsequent assembly into customer supplied cabinet.

Product Specifications

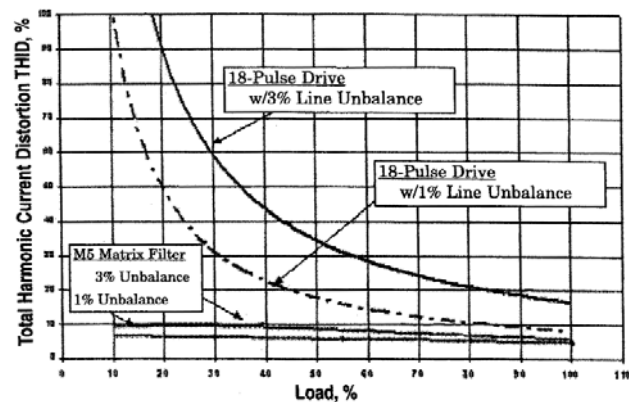

- Input Voltage 480 Volts +/- 10%
- Ambient Temperature:
 - Storage - 40°C to 90°C
 - Operating - 40°C to 40°C
- Altitude: 1000 meters maximum
- UL approved - File E191686 for U.S. and Canada

Minimum System Requirements to Achieve Performance Levels

- Source Impedance: 1.5% minimum to 5% maximum
- System voltage: 480 volts (line to line) +/- 10%
- Frequency: 60 Hz +/- .75 Hz
- Balanced Line Voltage: within 1%
- Background Voltage Distortion: 0% THVD

The Matrix D Filters typically achieve 5% THID at full load and guarantee worst case current distortion at any load between 0% and 100%, will be 8% THID or less at the filter input terminals. The Matrix D Series is typically used in place of applications requiring harmonic mitigation associated with 12- or 18-pulse rectifiers. The chart below compares the performance of Matrix D Filters to 18-pulse rectifiers in real world applications, which include line voltage unbalance of 1% to 3% and loading conditions from 0% to 100%.

Matrix D Filter performs better than 18-pulse in normal operating conditions.

Matrix D vs. 18-pulse

Capacitors, Arresters and Harmonic Filters

Matrix Series D Harmonic Filters

Selection Table

Matrix D, 480 VAC, 60 HZ, Three Phase, Variable Torque

Applications

Select Matrix filters based on the horsepower (or kilowatt) rating for the adjustable speed drive or the combined current rating of all motors to be connected to the load side of the filter. For constant torque, DC drive or other applications consult factory for proper filter selection.

Source Impedance

If the source impedance is less than 1.5% impedance, it is required that an input reactor of at least 1.5% impedance be added in order to have guaranteed performance level. For best value and performance it is recommended that a 3% line reactor be used whenever the source impedance is less than 1.5%.

Capacitors, Arresters and Harmonic Filters

Protective Capacitors for AC Rotating Machines

Surge Protection for AC Generators, Synchronous Condensers and Large Motors

Protective capacitors offer surge protection for AC generators, synchronous condensers and large motors.

Dielektrol® is the GE non-PCB power capacitor dielectric system, developed to provide an environmentally acceptable product with superior performance and reliability.

Protective capacitors contain a film dielectric and hermetically sealed bushings, which permit mounting of capacitors in an upright position or on the side. GE Surge Capacitors protect the winding insulation by reducing the steepness of wave fronts applied to or reflected within the machine windings.

Features and Benefits

- Surge protection for AC Generators, synchronous condensers and large motors
- Time proven GE HAZY film foil dielectric system
- Dielektrol® Non-PCB insulating fluid
- Provides Turn-to-Turn insulation protection by reducing steepness of wave fronts applied to or reflected within the machine
- Used in combination with TRANQUELL® station arresters for optimum protection
- Protective capacitors contain a film dielectric and hermetically sealed bushings, which permit mounting of capacitors in an upright position or on the side.
- Altitude: 0 to 18,000 feet

*18L0004WH and 18L0005WH are rated for DC Applications

Protective Capacitors

For other mounting arrangements contact the factory. 2400 and 4160 volt designs are identical and use the same product number. All units are provided with CSA labels.

Units are not intended for upside down mounting except for product numbers **18L0060WH, 18L0061WH, and 18L0062WH.**

Capacitors, Arresters and Harmonic Filters

Fixed Motor and Pump Capacitors (Type GEM™ OFW)

Outdoor Weatherproof

1-15 kVAR 240 Volts

1-30 kVAR 480 Volts

Three-phase Delta, 60 Hertz

Description

These Type GEM™ capacitors are designed primarily for the motor requirements of oil field and other pumping installations. Their application, however, may be extended to other motor applications installed indoor or outdoor. Type GEM™ OFW capacitors feature multiple cells which are assembled in parallel in a NEMA 3 enclosure. Each capacitor cell features the patented GE Pressure Sensitive Interrupter (PSI) that protects against cell rupture. The metallized polypropylene film dielectric system provides an instantaneous self-healing action and greatly reduced energy losses.

Discharge resistors are included to reduce voltage to 50 volts or less within one minute of de-energization. A 4 ft., 4-conductor flexible cable is provided for easy installation.

Type GEM™ capacitors offer high reliability and long life. They are suitable for operation over a temperature range of -40°C to +46°C. GEM™ also features Dielektrol® impregnant which is a biodegradable Class IIIB combustible fluid.

Capacitors, Arresters and Harmonic Filters

Fixed Low Voltage Power Factor Correction Capacitors

Enclosed Indoor Dustproof NEMA 12 and Outdoor Weatherproof NEMA 3

Single Phase or 3-Phase

1.0-500 kVAR, 60 Hertz

240, 480, 600 Volts

Description

Type GEM™ Capacitors feature multiple cells which are assembled in parallel in an enclosure suitable for both indoor and outdoor applications (NEMA 12 and NEMA 3). Each capacitor cell features the patented GE Pressure Sensitive Interrupter (PSI) that protects against cell rupture. The metallized polypropylene film dielectric system provides an instantaneous self-healing action and greatly reduced energy losses. GEM™ capacitors include discharge resistors to reduce voltage to 50 volts or less within one minute of de-energization. GEM™ also features Dielektrol® impregnant which is a biodegradable Class IIIB combustible fluid.

GEM™ capacitors offer high reliability and long life. They are suitable for operation over a temperature range of -40°C to +46°.

The GEM™ assemblies are UL Listed and CSA labeled.

Typical Type GEM™, cover removed

NOTE: Replacement EDT/EWT Equipments including 55L series capacitors are available on request. Please contact the factory. (For New Equipments use the 65L Series.)

Line Fuses/Blown Fuse Lights

To be specified by customer. Order by appropriate basic product number plus suffix for a complete product number.

NOTE: NEC Article 460-8B requires capacitors to have overcurrent protection in all ungrounded conductors—except if connected on the load side of a motor overload protective device.

Mounting

GEM™ 65L800 series can be mounted upright on any level surface, such as a floor, top of a motor control center, or directly to any wall with brackets provided.

GEM™ 65L900 series equipments can also be mounted upright on any level surface. An adapter kit is required for wall mounting. Order the wall mounting kit by product number 186C323600005, **List Price \$85.00, GO-410.**

Line Connection and Cable Entrance

Line connection and cable entrance on Figure 1 equipments must be made through the right end panel. For all other equipment figures the entrance may be made through either end panel (after first punching out the appropriate size hole).

¹See Note on page 20-15 referring to NEC Article 460-8B.

EXAMPLE: 240V, 3-phase, 25 kVAR, with 3 fuses and 3 blown fuse lights:

Product Number: 65L815TQ2, Price: **\$676.00**

Note: To determine kVAR at 208V, multiply kVAR at 240V by .75.

Consult factory for additional Single-phase designs.

See page 20-22 for outline diagrams and dimensions.

For more product information, go to www.ge.com/energy, click on "Products and Services" and then "Products."
For up-to-date outline drawings, go to <http://www.ge-energy.com/ecatalog/html/index>

Capacitors, Arresters and Harmonic Filters

Fixed Low Voltage Power Factor Correction Capacitors

Enclosed Indoor Dustproof NEMA 12 and Outdoor Weatherproof NEMA 3

Single Phase or 3-Phase

1.0-500 kVAR, 60 Hertz

240, 480, 600 Volts

42.5-550 kVAR, 240 Volts

Capacitors, Arresters and Harmonic Filters Fixed Low Voltage Power Factor Correction with Harmonic Filter Equipment

Metal-Enclosed (GEMTRAP)

Section 20

Application

The proliferation of electronic equipment used to improve efficiencies and provide more reliable performance causes harmonics on power systems. Equipment such as variable speed AC and DC drives, uninterruptible power supplies, switching power supplies and other solid state controls or devices inject non-linear components into what was a linear system. The application of power factor correction capacitor systems can create unwanted increases in harmonic voltage and current unless the capacitors are properly applied with reactors, in series with the capacitor, to suppress harmful harmonics.

GE's line of fixed, harmonically suppressed capacitors permits the installation of power factor correction capacitors on systems with nonlinear components. The GEMTRAP system can be tuned to any desired frequency but is normally tuned to the 4.7th harmonic.

Design

The installation of this system is application specific. Contact the GE Sales office or the factory to ensure that the proper combination of capacitors and reactors is used. Misapplication may result without proper guidance.

Engineering Specifications Fixed Power Factor Capacitor Equipment

Applicable Standards

—NEMA, IEEE/ANSI, NEC

Ratings

- 240V, 25 to 50 kVAR; 3 ph
- 480 V, 25 to 200 kVAR; 3 ph
- 600 V; 25 to 200 kVAR; 3 ph

Capacitor Cell

—Industrial Rated Capacitor cells

Equipment Construction

- Enclosure and wiring hood:
 - Indoor/outdoor gasketed heavy gauge steel. Finished with a zinc rich primer and an ANSI #70 enamel overcoat. Louvered panels around reactors for protection and cooling.
- Mounting:
 - Floor mounting.
- Capacitor Fuses:
 - UL recognized, designed specifically for capacitor applications. Rated 600 VAC, 200kAIC. Fast acting and current limiting; allows clearing action of capacitors while protecting from catastrophic failures. Three phase fusing standard.
- Aluminum Connecting Bus for Parallel Cells
- Input Connections:
 - Listed Cu/Al Mechanical wire connectors, sized for kVAR requirements, mounted on top of bus for easy access.
- Harmonic Reactor

Options

- Blown fuse lights
- Consult factory for larger kVAR requirements
- Consult factory for custom applications and designs

Capacitors, Arresters and Harmonic Filters

Automatic Fast-Switching LV Power Factor Correction Capacitors

GEMATIC® Quick Response

Section 20

Fast Response, Transient-Free Reactive Power Compensation Systems

- Ultra Fast Response (UFR): A real-time, transient-free system used to compensate extremely rapid loads within one cycle (typically 5-16 mSec).
- Fast Response (FR): A fast, transient-free system, used to compensate any load within 3-4 seconds.

Advantages

- Ultra Fast Response (UFR) and Fast Response (FR):
 - Transient-free capacitor group switching, using electronic switching elements
 - Prevent damage to sensitive electronic equipment
 - Saves energy
 - Harmonic filtration
 - Accurate power factor control, even in the presence of harmonics
 - Dramatically increases the life expectancy of switching elements and capacitors
 - Considerably lower temperature rise of capacitors and inductors due to unique scan feature
 - Built-in three phase network analyzer, measuring all network parameters including harmonics
 - Unique self-testing and comprehensive reporting feature
 - Power IQ
- Ultra Fast Response (UFR) (in addition to the above):
 - Cycle-by-cycle reactive power compensation (total acquisition time of 5-16 mSec)
 - Prevents voltage drop and flickering
 - Used for Real Time applications, such as spot welding and motor start-up
 - Enhances capacity of local generator systems, such as diesel and windmill generators
 - Combination of one to three single-phase systems available for unbalanced loads

Types Available

- Basic Systems: Include iron core reactors to limit the inrush current with either:
 - Detuned Systems: Include iron core reactors that detune the network to prevent resonance and absorb up to 50% of the 5th harmonic, or
 - Tuned Systems: Individually designed to absorb the 5th and 7th harmonics

Capacitors, Arresters and Harmonic Filters

Automatic Fast-Switching LV Power Factor Correction Capacitors

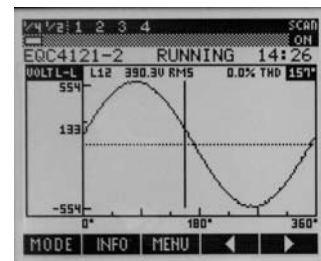

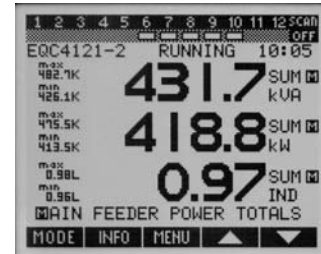

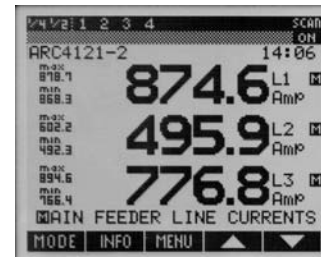

GEMATIC® Quick Response

Controller Specifications

Power Supply	115/230V, 50/60 Hz
LCD Display Size	94 x 76 mm
LCD Display Resolution	Graphic 160 x 128 pixels
LCD Display Type	FSTN, LED backlight
Frequency	45 to 65 Hz
Power Consumption	10 VA
Operating Temperature	-20° to +55°C
9 Analog Channels	3 current channels for mains load 2 current channels for Equalizer cabinet 4 voltage channels
Communications	RS485/422 communications port
Protocol	ELCOM, Modbus/RTU
Alarm	Voltage free N.O./N.C. relay, max 2A @ 250 Vac
Protection Class	IP 40
Dimensions	144 x 144 x 138 mm
Weight	1.4kg
Storage Temperature	-25° to 70°C
Electromagnetic Compatibility	EN50081-2, EN50082-2, EN55011, EN61000-4-2/3/4/5, ENV50204, EN50141
Safety Standards	EN61010-1, EN50439-1, UL508

Power IQ Measurement and Analysis Software

This software displays the system status as well as the measurement results on numerous screens running under Windows. All network parameters, including harmonics up to the 63rd, can be recorded at preselected intervals. The duration of the recording is only limited to the size of the computer's hard disk. The software can be set to record data based on selected triggers of various network parameters, such as voltage sags and/or current spikes. The system records before and after the trigger event. The software has intranet and internet support.

Capacitors, Arresters and Harmonic Filters

Automatic Fast-Switching LV Power Factor Correction Capacitors

GEMATIC® Quick Response

Features

- Design
 - Steel sheet cabinet
- Enclosure Finish
 - Epoxy powder coated, in gray (RAL 7032)
 - Internal parts rust proof aluzinc
- Rated Voltage
 - 400V/50 Hz and 480V/60 Hz
 - Other voltage values are available upon request
- Output rating
 - Refer to table
 - Other output ratings are available upon request
- Capacitors
 - Low loss, self-healing, IEC 831-1/2
- Ambient Temperature
 - +40°C max short time
 - +35°C average in 24 hours
 - +20°C annual average
 - -10°C low limit
- Protection class: IP 20. Standards:
 - Electromagnetic—EN50081-2, EN50082-2, EN55011
 - Compatibility—EN61000-4-2/3/4/5, ENV50204, ENV501 41
 - Safety Standards—EN61010-1, EN50439-1, UL508

Standard Balanced Systems for 480V/60 Hz Networks

- Systems with inrush limiting reactors
- Detuned systems with tuning frequency of 245 Hz (4.08th Harmonic at 480Vac/60 Hz) up to 100kVAR per group at 400V/50 Hz
- Tuned systems with tuning frequency of 282 Hz (4.7th Harmonic at 480Vac/60 Hz)

Non-Standard Systems (550V-1000V 50/60 Hz or 100V-240V 50/60 Hz)

- With circuit breaker or load breaker
- With or without busbar connection
- Single cabinet
- Dual door single cabinet
- Mechanical structure and dimensions of larger systems are available upon request

Capacitors, Arresters and Harmonic Filters

Automatic LV Power Factor Correction Capacitors

Type GEMATIC® Compact and GEMATIC® Select
 Three-phase, 60 Hertz
 240, 480, 600 Volts

Description

GEMATIC® multi-step power factor control equipment automatically maintains desired power factor level, adjusting to system load requirements in selected kVAR steps. The solid-state control responds to a current signal from the optional current transformer and to a voltage signal from a potential transformer included in the equipment.

GEMATIC® equipments feature capacitors with a metallized dielectric system providing a self-healing action and reduced energy losses. The biodegradable impregnant is a class IIIB combustible fluid. Discharge resistors reduce the voltage to 50 volts or less within one minute of de-energization. The capacitor cells are 3 phase and are designed for 110% of rated voltage, 135% of rated current, and, 135% of rated kVAR.

The power factor controller requires a CT signal for operation. The CT primary should be sized for the **total phase current** to be compensated (capacitor current and load current). Typically, the total phase current should be 50% to 80% of the CT primary rating. The CT secondary is rated 5A. The CT is connected to one phase of the equipment and the factory installed PT is connected across the other two phases.

GEMATIC® equipment includes:

- Solid-state multi-step power factory controller with digital display and indication of loss of kVAR or blown fuse
- Three phase self-healing metallized capacitors
- Stage contactors
- Potential transformer
- Plated copper bus
- Three fuses for each stage
- Modular construction easily uprated
- UL and C-UL Listed

Additional Features

GEMATIC® Compact

- NEMA 1 enclosure
- 50 kAIC bracing
- Optional breaker (600 amp 35kAIC maximum)
- Optional blown fuse indicating lights

GEMATIC® Select

- NEMA 1 enclosure (NEMA 12 available)
- 75 kAIC bracing (100 kAIC available)
- Optional breaker
- Optional blown fuse indicating lights

GEMATIC® Compact

GEMATIC® Select

Capacitors, Arresters and Harmonic Filters

Automatic LV Power Factor Correction Capacitors and Harmonic Filter Equipment

Type GEMATIC® Custom

The GEMATIC® Custom offers power factor correction with the flexibility of including harmonic filter reactors initially or adding them later if they are required.

Many of today's power systems require modern solutions to power factor correction. The rapid increase in variable speed drive use and other solid state devices has resulted in severe harmonic loads on power systems. GE has 10 years experience in preventing the occurrence of non-sinusoidal resonance. Successful integration in tuned L-C networks solves the problem of parallel resonance.

GEMATIC® Custom automatic power factor correction systems with 3-phase harmonic suppression reactors are application specific. Accordingly, each installation requires specific information to aid GE application engineers in designing each system to meet your requirements. This information should include, but not be limited to, kVAR requirements, transformer size and impedance, kVAsc of the transformer, and a harmonic profile of your system. Load characteristic at the time of the survey and worst case should also be included.

The GEMATIC® Custom systems may be configured for the addition of harmonic suppression reactors in the future to meet the imminent needs of your system. This reduces initial investment and provides a ready made retrofit package. This system provides total flexibility in achieving maximum automatic power factor correction. Please contact the local GE sales office or the GE factory for any assistance with your particular power factor correction and harmonic suppression needs.

Applicable Standards

—NEMA, IEEE/ANSI, NEC

GEMATIC® Custom Optional Features

- Outdoor NEMA 3R enclosure
- 100 kAIC bus bracing
- Main breaker
- Iron core reactors
- Blown fuse indicating lights

GEMATIC® Custom includes

- Solid-state multi-step power factor controller with digital display and indication of loss of kVAR or blown fuse
- Three phase self-healing metallized capacitors
- Stage contactors
- Three fuses for each stage
- Potential transformer
- Plated copper bus, 75 kAIC bracing
- NEMA 1 enclosure
- UL and cUL listed

Ratings

- 240 V; up to 300 kVAR
- 480 V and 600 V; up to 1500 kVAR
- For larger kVAR ratings, contact factory

GE GEMACTIVE Active Harmonic Filter

- Dynamic current injection for harmonic cancellation and power factor correction
- Reduces harmonics for IEEE 519 (1992) standard compliance
- Decreases harmonic related overheating of cables, switchgear and transformers
- Reduces downtime caused by nuisance thermal tripping of protective devices
- Increases electrical network reliability and reduces operating costs
- Compensates each phase independently
- UL and CSA approved
- Parallel connection allows for easy retrofit and installation of multiple units for large networks
- Filters to the 50th harmonic
- Filters entire network or specific loads depending on installation point
- Response to load fluctuations begins in 40 microseconds with 8 milliseconds for full response to step load changes
- IGBT based power electronic technology
- 50, 100 and 300A models for 208 to 480V, 50/60 Hz three-phase networks

GE GEMACTIVE reduces problematic harmonic levels and provides instantaneous power factor correction. Cost savings result from reduced downtime and maintenance. In addition, over-sizing of distribution equipment to provide for harmonics and poor power factor can be avoided. GE GEMACTIVE dynamically corrects power quality by providing: Active Harmonic Filtration, Resonance Prevention, Power Factor Correction and Dynamic VAR Compensation.

Dynamic VAR Compensation by GEMACTIVE

Large inductive inrush currents typically cause voltage sags that result in reduced productivity, poor process quality and possible downtime due to undervoltage tripping of devices.

GEMACTIVE is able to inject peak current at two and a half times its rms current rating for one cycle. For many applications this level of compensation eliminates visible flicker and improves voltage regulation resulting in better productivity and quality.

GEMACTIVE Sizing

A harmonic study is not required to select the size of the GEMACTIVE installation. This is because when GEMACTIVE is installed it becomes a lower impedance path for harmonics than the existing power supply. For sizing, please contact GE. To expedite the product selection process, please have a single line diagram and/or details of the application including sizes of transformers, non-linear and linear loads, and any existing filters and capacitors.

Capacitors, Arresters and Harmonic Filters

Fixed MV Power Factor Correction Capacitors

Enclosed Indoor Dustproof and Outdoor Weatherproof

25-900 kVAR, 60 Hz

2400, 4160, 4800 Volts

1.0-200 kVAR, 240 Volt

Application

Type HWT equipments are suitable for use on indoor or outdoor primary circuits where small amounts of kVAR are required. They may be installed at load centers or directly at the terminals of 2300 and 4000 volt motors. Permissible ambient temperatures are -40° to $+45^{\circ}\text{C}$. Discharge resistors in each capacitor reduce the voltage to 50 volts or less within 5 minutes of de-energization.

Type HWT equipments contain less than three gallons of flammable liquid in a single container and therefore do not require installation in a vault to meet the NEC.

Line Terminals

Solderless connectors are provided on each phase:

Assembly	Connector Size
One unit	#10 - #4
Two unit	#14 - 1/0
Three unit	#6 - 250 kcmil

Fuses

Protection is provided by 50,000 ampere interrupting capacity current limiting fuses. A pop-up button on the fuse gives visual indication of a blown fuse. GE recommends the use of three fuses for the most complete protection against terminal-to-terminal and terminal-to-ground failures on grounded systems. Two fuses are sufficient to provide protection against terminal-to-terminal failures on ungrounded systems.

Blown Fuse Lights

Blown fuse lights provide a positive **external** indication of an operated fuse. A glowing light makes inspection of capacitors easy, effective, and safe. A 120 VAC source must be supplied externally. When ordered with this option, the HWT assembly is supplied with one light per capacitor.

For higher voltage designs, contact factory or consult e-catalog.

Blown Fuse Light Option

List Price Adder, GO-410A

	2 Fuses per Unit	3 Fuses per Unit
1 Unit Assembly	\$310.00	\$375.00
2 Unit Assembly	\$620.00	\$750.00
3 Unit Assembly	\$930.00	\$1125.00

To order Blown Fuse Light option add "100" to the last 3 digits of the standard product numbers above.

Example: 37F0524436 becomes 37F0524536. Add the appropriate list price adder from the chart to the left.

For units tested and labeled per CSA Standard, add 037 suffix.

For more product information, go to www.ge.com/energy, click on "Products and Services" and then "Products."

¹When replacing rack mounted RS or US unit with WS unit, ask for bracket adapters. Order two 251A639700051 and two 115A189300009 at NO CHARGE.

²Top and Bottom fuse adapters needed, one each per fuse: Order Product No. 308A390100001 \$17.60 List, GO-410A.

This is a kit that contains one top and one bottom adapter.

For units tested and labeled per CSA Standard, add 037 suffix.

Capacitors, Arresters and Harmonic Filters

High Voltage Capacitor Units, Single and Three-Phase

Section 20

Standard Duty
(Film/Foil Designs w/Dielektrol®)
50-600 kVAR, 60 Hertz
2400-24,940 Volts

Film/Foil Dielektrol® is the GE non-PCB low loss power capacitor dielectric system, developed to provide lower operating costs and greatly enhanced fuse coordination for the prevention of case ruptures. The Dielektrol® insulating liquid is a Class IIIB combustible fluid.

- These capacitors are designed to meet ANSI Std 18
- Units for special applications (i.e. system harmonics) or other non-standard capacitors, contact Product Department or visit www.ge.com/energy
- CSA labeling available upon request

Capacitors, Arresters and Harmonic Filters

High Voltage Capacitor Units, Single- and Three-Phase

Section 20

Heavy Duty

Film/Foil Designs w/Dielektrol®)

50-600 kVAR, 60 Hertz

2400-24,940 Volts

GE Heavy Duty all-film capacitors are designed, manufactured, and tested to meet the requirements of all applicable ANSI/IEEE, NEMA, and IEC standards. In addition they are designed to exceed the requirements of these standards in terms of continuous rms and peak overvoltage withstand capabilities. They are good for 125% continuous rms overvoltage capability and 135% peak overvoltage capability. These capacitors are suitable for industrial power systems that have higher voltages or harmonic loads. CSA Labeling available upon request and 50 HZ designs also available upon request.

Capacitors, Arresters and Harmonic Filters High Voltage Pole-Mounted, Open Stack-Rack and Metal Enclosed Equipment

Pole-type Equipment
150-3600 kVAR, 60 Hertz
Open Stack-rack Banks
1200 kVAR and above, 60 Hertz

Metal Enclosed
2.4 through 38kV
150 kVAR and above

Pole Mounted Equipment Description

These equipments are pre-wired, factory assembled, and shipped ready for pole installation with single-phase units. Racks are of welded structural aluminum and are suitable for mounting switches and junction box and cable assembly. Lightning arresters and/or potential transformers can also be mounted.

Required Data for Pole-Type Quotation:

The following questions must be answered before contacting the factory for a quotation.

1. Total kVAR? _____
2. Line-to-line (system) voltage? _____
3. Line-to-neutral voltage? _____
4. Bank connection — Delta, Grounded Wye, or Floating Wye? _____
5. Fixed or switched? _____
(check one)
 - a. Fixed expandable (switches later) _____
 - b. Fixed nonexpandable (no switches later) _____
 - c. Switch type (vacuum or oil) _____
6. Number of capacitor bushings (1 or 2)? _____ BIL (Basic Insulation Level) _____
7. Options (specify):
 - a. Current transformer
 - b. Potential transformer
 - c. Lightning arresters
 - d. Switching controls (example: voltage, current, kVAR, time controls)
 - e. Other. Please specify _____

Open Stack-Rack Equipment Description

This application is most popular for large blocks of three-phase Kilovar. Capacitor units and individual fuses are installed in welded aluminum racks, either upright or edge-mount. Racks are shipped ready for field installation with base and inter-rack insulators, substructure, interconnecting bus wire and other accessories for a three-phase equipment.

Harmonic filter banks are available. Submit complete specifications including harmonic currents and voltages.

Required Data for Stack-Rack Quotation:

The following questions must be answered before contacting the factory for a quotation.

1. Total kVAR? _____
2. Line-to-line (system) voltage? _____
3. Bank connection — Floating Wye, Grounded Wye, Delta, or Double Wye¹? _____
4. Fixed or switched²? _____
 - a. If switched, how many steps? _____
 - b. If switched, how many kVAR per step? _____
5. Is substructure required (8 ft. standard)? _____
6. Space limitations (if any). Please specify _____
7. Options (specify):
 - a. Current transformer
 - b. Potential transformer
 - c. Ground switch (phase, neutral, both)
 - d. Other. Please specify _____
8. When optional apparatus is requested, state the available short circuit current for proper sizing of the options.

¹Three-phase, 60 Hertz is assumed. Specify if different.

²If switched:

- a. Supply specification on switch requested.
- b. Advise if any parallel banks and ratings.

Typical in-line pole-type equipment, single-phase units

Upright stack-rack equipment

Edgemount stack-rack equipment

Capacitors, Arresters and Harmonic Filters High Voltage Pole-Mounted, Open Stack-Rack and Metal Enclosed Equipment

Metal Enclosed Capacitor Banks
2.4 thru 38KV

These power factor correction equipments are metal enclosed for indoor and outdoor installations. These banks can be located on a distribution feeder as a small padmount or at the workstation site. Banks are shipped ready for installation. Banks can be provided with the following options: oil or vacuum switching, automatic control and protection, stainless steel housing, custom colors, key mechanical or electrical interlocks, capacitor removal device, NEMA 1, 3R, 4, 4X or 12 enclosures.

Metal Enclosed Cabinet

Required Data for Metal Enclosed Quotation:

The following questions must be answered before contacting the factory for a quotation.

1. Total kVAR? _____
2. Line-to-line (system) voltage? _____
3. Bank connection - Floating Wye, Grounded Wye, Delta, or Double Wye? _____
When in doubt Floating Wye is typically the best choice to avoid fault protection issues
4. Fixed or switched? _____
 - a. If switched do you want automatic control? _____
 - b. If switched, how many steps? _____
 - c. If switched, how many kVAR per step? _____
5. Space or access limitations (if any). Please specify _____
6. Type of Enclosure (Indoor or Outdoor; is Stainless Steel required)
7. Options (specify):
 - Incoming Air Disconnect _____
 - Main Incoming fuses (capacitors will be individually fused as standard practice) _____
 - Ground switch (phase, neutral, both) _____
 - Power factor Controller (see 4a above) _____
 - Key Interlocks _____
 - Blown fuse Detection System _____
 - Control Power Transformer _____
 - Arresters - Distribution, Intermediate or Station class _____
 - Incoming Breaker _____

Application

Single-pole, remote-control, outdoor oil switch is a completely self-contained, motor-operated, nonautomatic device. Application is the switching of line or station capacitor banks.

Oil Switches—Motor Operated¹

Capacitors, Arresters and Harmonic Filters

OEM High Energy Surge Protectors

9L10K Series
120-600 Volt Ratings

This HESP design is intended for mounting in OEM equipment or in an existing enclosure to offer protection against internally and externally generated surges. UL-1449, Second Edition Recognized Component designed and tested according to ANSI/IEEE C62.41 and C62.45.

Features

Energy Capability Options: This high energy capability option permits survivability in demanding environments and a lower clamping level for better protection.

High Surge Current Capability: The 76mm HESP protective elements are designed and tested at 100kA per mode.

Parallel or Series Connection: Unfused protectors are suitable for series connection in circuits rated up to 100 amps continuous, and T-connection (parallel) with no limitation on continuous load current.

The ability to connect the units in the series configuration offers optimum protection. This connection keeps lead length inductive voltage to a minimum and provides the lowest protective levels for each rating.

Dependable Protection: The unique zinc oxide "valve" element inside each arrester gives you improved overvoltage protection. These tough elements are designed so that they can handle surge after surge without trouble, breakdown, or repairs. Your TRANQUELL® arrester's protective ability will remain unchanged throughout its service life.

Common Mode Protection Option: In addition to normal mode protection (L-L and L-N), HESP offers common mode protection (L-G and N-G) for 3-phase wye and single-phase 1 or 2 pole devices. This optional protection is recommended for devices remotely located from the system neutral to ground bond.

9L10K Series is direct replacement for superseded 9L10M Series.

Capacitors, Arresters and Harmonic Filters

TRANQUELL® Motor Surge Protector

Motor and Generator Surge Protection Equipment
 Three-Phase, 60 Hz
 2400 through 24,000 Volt Ratings
 NEMA 12/3R Enclosure

Description

TRANQUELL® MOTOR SURGE PROTECTOR provides surge protection for AC rotating machines including motors and generators. They are typically applied directly at the motor terminals and consist of GE TRANQUELL® Station Class arresters connected in parallel with GE Dielektrol® Protective Capacitor(s). The arresters protect the major insulation to ground by limiting the amplitude of applied impulse waves or reflections within the machine windings, while the protective capacitor(s) reduce the steepness of wave fronts. Studies indicate that this dual protection approach results in significant reduction of lightning stresses imposed on rotating machines and contribute to increased security against failures and downtime costs. Enclosure is suitable for indoor and outdoor applications.

How to Select

1. Determine the nominal system voltage and connection at the equipment being protected (Line-to-Line voltage, delta or wye, grounded or ungrounded).
2. Select product number (column 2 or 3) based on the line to line voltage (column 1).

Selection Table

Capacitors, Arresters and Harmonic Filters

TRANQUELL® Secondary Surge Arresters and Protective Capacitors

Section 20

120-650 Vac
Series 9L15F

Assures Service Continuity

The GE TRANQUELL® secondary arrester is specifically designed to protect utility, agricultural, and industrial installations and equipment in the 120-650 volt range from overvoltages caused by lightning discharges. It is available for both single- and three-phase application.

Applications that provide ideal installations for this arrester are:

- Exposed secondary circuits
- Watt hour meters
- Station auxiliary equipment and circuits
- Motors and control circuits
- Distribution transformer secondaries

Dependable Protection

The unique metal oxide element inside each TRANQUELL® arrester gives you improved overvoltage protection. These tough elements are designed so that they can handle surge after surge without trouble, breakdown, or repairs. Your arrester's protective ability will remain unchanged throughout its service life.

Secondary Arresters – Indoor or Outdoor Mounting

UL and CSA Listed - For Knockout or Bracket Mounting

Secondary Surge Arrester Protective Characteristics

Discharge Voltage kV Crest (8 x 20 Microsecond Current Wave)				Discharge Capabilities 8 x 20 microsecond	Energy Handling Capability
1.5 kA	5.0 kA	10.0 kA	20.0 kA		
2.2	2.6	2.9	3.5	20,000 amp	900 joules per pole

Fusing

To minimize the possibility of violent rupture in the unlikely event of electrical failure of the arrester, current limiting fuses are recommended for all applications above 120 volts. A fuse must be installed in series with each pole of the arrester (i.e. each black wire). See Fuse Selection table below. The GEH-4982C instruction book shipped with each arrester also includes fusing guidelines.

Fuse Selection – For 9L15E Series (above 120V)

Arrester Location	Maximum Lightning Impulse ^{2,3}	Fuse Rating ⁴
A Long Branch Circuit more than 20m from Service Entrance with wires #14-10	200A	30 A; 600 V U.L. Class T 200,000 A Interrupt
B Major Feeders and Short Branch Circuits less than 20m from Service Entrance	3 kA 8x20 μs	30 A; 600 V U.L. Class T 200,000 A Interrupt
C Outside and Service Entrance	10 kA 4x10 μs	30 A; 600 V U.L. Class T 200,000 A Interrupt

Figure 1
TRANQUELL® Arrester

Figure 2
Protective Capacitor⁵

²Maximum impulse expected as described in ANSI/IEEE C62.41 for systems with medium exposure to surges. Arresters have been design tested to impulses as high as 20 kA, 8x20μs.

³Design tests for secondary arresters as required by ANSI/IEEE standards are limited to a maximum of 10 kA, 4x10μs impulses.

⁴UL Class CC (Midget) 30 A fuses are also satisfactory for locations A and B.

⁵Secondary capacitor is a 3-pole device that can be applied with 1- and 2-pole arresters by connecting the corresponding black leads and tying off the unused leads.

TRANQUELL® Station Arresters

Polymer and Porcelain High-Voltage
Indoor and Outdoor Service

Product Description

TRANQUELL® XE porcelain and XEP polymer station arresters provide both excellent protective characteristics and temporary overvoltage capability. Gapless construction results in a design which is simple, reliable and economical while offering excellent fault current capability to meet the most demanding service conditions. The GE arrester is based on the field-proven metal oxide disks known for maintaining stable characteristics. Station arresters are designed and manufactured in accordance with the latest revision of ANSI/IEEE C62.11.

¹TRANQUELL® Arresters are designed to be operated at voltages equal to or less than their continuous capability as stated in column 2.

²Application of specified rating is permissible for ungrounded or resistance grounded systems where a single phase ground may be tolerated for a substantial period of time not to exceed the arrester's overvoltage capability.

³For underhung (or upside down) mounting, with eyebolt terminal on the bottom, change letter B of the product number to E.

⁴Special Ratings available on request.

¹Center line to center line is equivalent to phase-to-phase; center line to ground is equivalent to phase-to-ground.

These are recommended minimum clearances only and as such are not intended to take precedence over existing construction codes or specifications.

²Overall height of 9L11XPB0**S arresters is determined by subtracting 0.63 in or 15.9 mm from listed overall height.

¹ Maximum discharge voltage for an impulse current wave which produces a voltage wave cresting in 0.5 µs. Discharge Currents are 10kA for 42-353 kV MCOV. This can be used for coordination where front-of-wave sparkover formerly was used.

² Discharge voltages are based on a 500A surge of 45 µs time to crest through 88kV MCOV and a 1000A surge of 45 µs to crest through 180 kV MCOV and 2000A through 245 kV MCOV.

³ Minimum clearances are based on arrester protective levels and should be increased when necessary to meet local requirements for spacing of energized equipment.

Capacitors, Arresters and Harmonic Filters

TRANQUELL® Intermediate Arresters

Polymer High Voltage
Indoor and Outdoor Service

Section 20

Product Description

TRANQUELL® XEP polymer intermediate arresters provide both excellent protective characteristics and temporary overvoltage capability. Gapless construction results in a design which is simple, reliable, and economical while offering excellent fault current capability to meet the most demanding service conditions. The GE TRANQUELL® arrester is based on the field-proven metal oxide disks known for maintaining stable characteristics. TRANQUELL® intermediate arresters are designed and manufactured in accordance with the latest revision of ANSI/IEEE C62.11 and IEC 99-4.

¹TRANQUELL® Arresters are designed to be operated at voltages equal to or less than their continuous capability as stated in column 2.

²For underhung or upside down mounting with eyebolt terminal on the bottom change the letter B of the catalog number to E.

³Application of specified rating is permissible for ungrounded or resistance grounded systems where a single phase ground may be tolerated for a substantial period of time not to exceed the TRANQUELL® arresters overvoltage capability.

The energy capability for GE Surge Arresters is defined based upon Switching Surges, 2 milliseconds, transmission line discharges, with multiple discharges over a one-minute period and with current amplitudes that are no greater than listed below. Based upon this definition GE arresters have an energy capability as follows:

Distribution, Intermediate and Station Arrester – Application

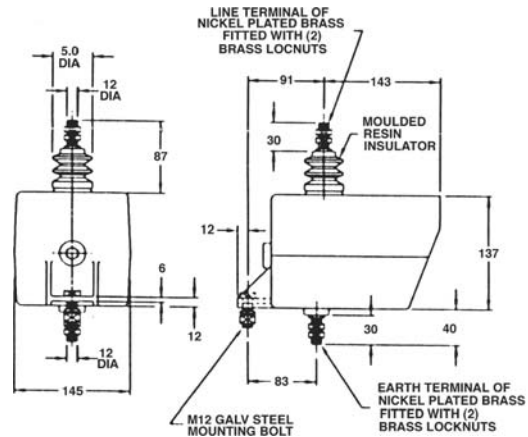

Arrester Rated Voltage (kV rms)	Housing Type	Arrester Type	Max. Current for Energy Rating (Amps)	Energy (kJ/kV of MCOV)
3-36 kV	Polymer	Heavy Duty Distribution	450	1.8
3-36 kV	Polymer	Riser Pole	650	2.2
3.0 - 144 kV	Polymer	Intermediate	650	6
3.0 - 144 kV	Polymer	Station	1000	9
3.0 - 48 kV	Porcelain	Station	1000	9
54 - 360 kV	Porcelain	Station	1500	13
396 - 612 kV	Porcelain	Station	2400	17

To provide assurance that all disks used in GE arresters have this capability, we perform a Low Current Long Duration Strength Test on 100% of our disks applying the above energies. We apply two groups of three shots per group. Each shot is a square wave, which is 2 milliseconds wide. We allow 15 to 20 seconds between shots, three are applied within 60 seconds, and we allow the disk to cool between the two groups of three shots. This is followed by three shots of a half sine wave, which is 14 milliseconds wide with 15 to 20 seconds between shots. These tests weed out any weak disks and provide assurance that the disks used in the final product are indeed capable of withstanding the energy claimed.

GE arresters exceed the requirements of Seismic Zone 2 and have Cantilever Strengths and fault current capabilities as follows:

Discharge Counters, Insulating Bases and Brackets

Description	Weight		Product Number	List Price GO-76A
	lbs	kgs		
Discharge Counter	6.6	3.0	9L26FBE005E	\$1155.00
Discharge Counter with leakage current ammeter	7.7	3.5	9L26FBE012E	\$1449.00
Description -3 included, 1 for each foot of the arrester				
Insulating Base for Polymer Intermediate arresters and Porcelain Station arresters 3-48kV rated voltage	5	2.27	9L11LGW804S	\$180.00

Capacitors, Arresters and Harmonic Filters

9L20 Polymer Distribution
9L27 Polymer Riser Pole
0-12,000 ft. Altitude

Product Description

The GE TRANQUELL® distribution and riser pole polymer line of surge arrester products provide excellent protective characteristics, temporary overvoltage capability, and switching surge energy withstand to power systems of voltages less than 46 kV rms. GE polymer arresters are ideally suited for application in both indoor and outdoor situations. They are designed and manufactured in accordance with the latest revision of ANSI/IEEE C62.11 and IEC 99-4.

TRANQUELL® distribution arrester, rated 10 kV, with disconnecter)
