GE's **CR151K** Series resilient molded nylon blocks resist breakage, and occupy minimum space on busy control panels. They are automotive-approved to take the abuse of misguided screwdrivers.

Ratings by wire size translate into amperes-per-circuit, according to the temperature limit of wire insulation and the internal panel ambient temperature, per the typical performance chart on page 12-4.

Fully shielded construction protects all live parts. Nylon has excellent anti-tracking qualities, as well as toughness and impact resistance.

GE's **CR151A,C** modular terminal boards are ideal for general industrial use, including panels, switchboards, and for whatever grouping of wiring connections is desired.

Select from 25-, 30-, 85- or 125-ampere terminal types; 300- or 600-volt ratings; channel or panel mounting. Various types of individual sections may be mixed to meet specific needs.

The **CR151B** and **CR2960SY** terminal boards are heavy-duty, molded terminal boards available for special use in wiring of control panels, and in primary or power circuits. CR151B are available with clear covers for terminal protection.

### CR151K

Modular Resilient Terminal Boards

300 and 600 Volts

275 Amp Maximum and 30°C Ambient

Automotive Approved

#### Description

Resilient molded nylon blocks resist breakage, and occupy minimum space on busy control panels. They are automotive-approved to take the abuse of misguided screwdrivers.

Ratings by wire size translate into amperes-per-circuit, according to the temperature limit of wire insulation and the internal panel ambient temperature. Refer to typical performance chart on page 12-4.

Fully shielded construction protects all live parts. Nylon has excellent anti-tracking qualities, as well as toughness and impact resistance.

#### Features

- Compact size—four circuits per inch at 300 or 600 Volts, #22-10 wire, without stacking.
- Collar-type terminals with spring-action overlapping top plates:
  - Keep screws in position during shipping—backed out, ready for tightening once wire is installed.
  - Keep connections tight by maintaining pressure on conductors during expansions and contractions.
  - Made of stainless steel #410.
- Large opening makes wiring easy.
- Insulating walls on all sides of entrance to collar, guide the wire into the lug; strands do not go astray.
- Blocks are installed and removed without moving adjacent blocks.

#### Product Number Selection Instructions

1. Product Number represents one device. List price is per device. Devices are sold only in standard carton quantities. Order quantity of devices needed in increments of standard carton quantities
2. Example: Order 200 quantity of CR151KFC @ **\$4.80 each**, **GO-10G5**. Total List Price, **\$960.00**, **GO-10G5**.

## DIN-Rail Mounted Terminal Blocks

### CR151K

#### CR151KFC45F 12-Point Terminal Block— Sub-miniature Spacing, 5 Circuits Per Inch

#### Features

- Five circuits per inch give total of 12 circuits in 2.4 inch long terminal block; equal to European 5 mm spacing.
- Voltage/current ratings: 300 Volt rating: 20 A; 600 Volt rating: 5A.
- Larger screws can take torque of standard screwdriver.
- Larger, easier-to-wire openings take one # 12 or two # 14 wires.
- Multi-circuit jumper available.
- Unique staggered design helps keep loose strands from shorting adjacent poles.
- One-piece design—no end barriers and clips needed.
- Extra wide marking area for pressure sensitive tape permits printing or marking prior to assembly; sliding marker design permits easy access to all screws.
- Universal mounting—fits all standard GE rails and mini DIN-rails.

### CR151K

Technical Data

#### Ampere Rating Of Terminal Blocks In Ambient Temperatures 30-80°C

Ampere rating is based on maximum allowable working temperature. This is a sum of ambient temperature and temperature rise caused by the current.

Allowable currents for each wire size are given in the National Electrical Code, with correction factors for ambient temperatures over 30°C. The ratings provided by the graph are based on 90°C total maximum temperature—standard for panel wire insulation and very safe for nylon.

The ratings are based on temperatures reached on the center pole of three adjacent poles, each carrying current and wired with largest size copper conductors indicated for the block.

### CR151C

Modular Terminal Blocks  
300 and 600 Volts  
25, 30 and 85 Amps  
General Industrial Use

#### Application

GE's CR151C terminal boards are well-suited for use on panels, switchboards, or any equipment where it is desirable to group wiring connections. 25- and 30-ampere boards have creepage and clearance distances that meet 300 volt requirements for industrial control equipment. 85-ampere boards meet 600 volt requirements.

Screw, box, and/or box-clamp type individual sections may be mixed by the customer to suit the particular application.

Forms may be obtained with or without the vinyl marking strip.

#### Features

- Choice of one 25-ampere, two 30-ampere and two 85-ampere terminal types.
- Rated 750 volts maximum (IEEE switchgear standards).
- Screw terminals accept 5/16-inch ring or spade connectors, and #22- through #12 wire.
- 30-ampere box terminals accept #18- through #10-wire.
- 85-ampere box terminals accept #14- through #4-wire.
- 30-ampere box clamp terminals accept #22- through #10-wire.
- 85-ampere box clamp terminals accept #14- through #4-wire.
- Interlocking construction—blocks side together.
- Panel or channel mounting.

Factory-assembled terminal boards are no longer offered.

#### Product Number Selection Instructions

# Terminal Blocks Panel or Mounting Track Terminal Blocks

### CR151A

#### Accessories

#### How to Determine Mounting Track Length

If all the terminal blocks are of the same type, use the table below to determine the proper mounting track; if terminal blocks are to be mixed, multiply the width by the number of each type of block you need. Widths (overall thickness) of block sections are listed below. Total the results, then add 1 3/8 inches to allow for two end blocks and one barrier (either large or small).

Total gives the minimum track length for your application. Select length of track from table below, allowing space to add blocks of

different ratings and terminal sizes in the future. For example: Your application requires a board with twelve 30-ampere screw-type terminals and two 30-ampere fuse clips. Width of the 30-ampere terminals would be 12 x 5/8 or 7 1/2 inches; total for the fuse clips would be 2 x 3/4 inches or 1 1/2 inches. Total block length is 9 inches. To this, add 1 3/8 inches (for two end blocks and barrier) and you get 10 3/8 inches. Smallest mounting track that can be ordered is CR151A1018, which is 12 7/8 inches long.

#### Mounting Track

### CR151B

One Piece Terminal Boards for Control Circuit  
600 Volts  
30 Amps

#### Application

These molded terminal boards are for use in wiring of control panels.

A write-on marking strip markable with ink or pencil is included. Terminal boards may be mounted end-to-end without spacing.

#### Features

- Electrical rating—30 amperes, 600 volts.
- Rugged material—phenolic.
- Number of points per board—4, 6, 12, or 13.
- Mounting—may be mounted end-to-end without spacing
- Terminal identification—15/32-inch wide marking strip; markable with ink or pencil.
- Wiring—terminals accept wire sizes through AWG # 10

#### Product Number Selection Instructions

1. Order one piece terminal boards by complete Product Number and by package quantity. Example: Eight (8) six-point, one-piece boards are required, rated 30 amperes, 600 volts with screw-type terminals both sides: order ten CR151B6 at **\$7.20 each, GO-10G5**.

#### Ratings for all Binding Screw and Round Washer Head Screw Terminals

- Suitable for #18 - #10 AWG stranded or solid copper wire, single conductor only.
- Torque 20 in-lb.

#### Ratings for all Wire Clamp Terminals

- Suitable for #18 - #10 AWG stranded or solid copper wire, single or parallel conductors of same size and type (stranded/stranded or solid/solid only).
- Torque 20 in-lb.

#### Parallel two conductor size combinations

Wire Size (AWG)	Torque
#10 with #12	20 in-lb (stranded/stranded or solid/solid wire only)
#12 with #14	20 in-lb (stranded/stranded wire only)
#14 with #16	20 in-lb (stranded/stranded or solid/solid wire only)
#14 with #18	20 in-lb (stranded/stranded wire only)
#16 with #18	20 in-lb (stranded/stranded or solid/solid wire only)

#### Parallel three conductor size combinations

Wire Size	Torque
#14 with #14 with #14	20 in-lb (stranded/stranded/stranded wire only)
#16 with #16 with #16	20 in-lb (stranded/stranded/stranded wire only)
#18 with #18 with #18	20 in-lb (stranded/stranded/stranded wire only)

CR151B, 6-Point Terminal Board

#### Agency Certifications

- UL Recognized, File E40800, Vol. 3, Sec. 2 (Category XCFR2 Terminal Blocks - Component)
- CSA Certified, File LR-15492-157 (Class 3211 07 Industrial Control Equipment - Miscellaneous Apparatus)

## Section 12

### CR2960

One Piece Terminal Board for Power Circuits  
600 Volts  
300 Amps Maximum  
Heavy-Duty Use

#### Application

These heavy-duty terminal boards are for use in primary or power circuits up to the ampere rating listed.

Blocks have binding screws for both incoming and outgoing lines.

#### Features

- Where to use—power circuits.
- Ratings—50-, 100-, 150-, 300-amperes; 600 volts.
- Type of construction and material—one-piece, phenolic.
- Terminal configurations—binding screw terminals (stud terminals) on 300-ampere forms.
- Type of mounting—panel.
