Thermal Management Design Guide Overview

Incorporating thermal cooling within an enclosure can lengthen system life and increase control line reliability. The accumulation of heat in an enclosure is potentially damaging to electrical and electronic devices. Overheating will shorten the life expectancy of costly electrical components and can lead to catastrophic failure. It is, therefore, important that system designers be aware of the temperature implications of their designs prior to implementation and, where necessary, take steps to reduce heat build-up inside the enclosure.

Extreme temperatures can have the following effects on industrial control equipment:

- Catastrophic failures can occur
- Silicone material properties can change
- Drive performance is de-rated
- I/C-based devices may experience intermittent fluctuations in output and voltage migration
- Mean Time Between Failure (MTBF) decreases exponentially

The costs when a line goes down due to temperature extremes are:

- Productivity losses
- Increased labor costs
- Increased scrap
- Opportunity losses
- Component costs
- Missed ship dates
- Decreased customer satisfaction

Types of Cooling

Open Loop: Utilizes the ambient or outside air, filtered or unfiltered, to cool the electronics

Closed Loop: Maintains the sealed integrity of the cabinet while utilizing the internal cabinet air to cool the electronics

Active Cooling: An external device enhances the cooling process

Passive Cooling: Cooling occurs via natural convection and heat dissipation

Air Conditioner

Closed Loop System: Can maintain a Type 3R, 12, 4 or 4X rating and can create an environment cooler than ambient. This is an ideal type of cooling which creates a more reliable system and improves equipment life cycle. A typical internal temperature design point is 85-95 F. Hoffman air conditioners are designed for continuous operation in ambient environments up to 125 F or 131 F, depending on the model.

For sizing and selecting an air conditioner, refer to the Hoffman Thermal Management Catalog, or go to hoffmanonline.com to use the Thermal Management Sizing and Selection Software.

When an electrical enclosure wall is penetrated with an opening it must be covered by a rated part. All of the above cooling systems have been designed and certified to be used on electrical enclosures and maintain the product Type Rating identified on the corresponding product specification sheet.

Vortex Cooler

Closed Loop System: Can maintain a Type 12, 4 or 4X rating and can create an environment cooler than ambient. This is an ideal type of cooling for smaller enclosure applications where compressed air is available.

Heat Exchanger

Closed Loop System: Maintains a sealed system that will match the Type rating of the heat exchanger. Temperature will always be greater than ambient. Equipment inside the enclosure must be evaluated to sustain a worst-case temperature rise above ambient. For sizing and selecting heat exchangers, refer to Heat Exchangers Sizing and Selection.

Filter Fan and Exhaust

Open Loop Systems: Usually only used in relatively clean Type 1 or Type 3R environments where the temperature inside the enclosure will always be greater than outside the enclosure. Equipment inside the enclosure must be evaluated to sustain a worst-case temperature rise above ambient.

For sizing and selecting filter fan packages, refer to Fans, Blowers, Louvers and Vents Sizing and Selection.

Finding the Right Thermal Management Solution

To determine the best thermal management products for the application, the user needs to define information about the environment, enclosure and the equipment inside. Use the form below in conjunction with Hoffman's online Thermal Management Sizing and Selection Software.

Project Environment/Thermal Evaluation Data Form

Environment

System Location: Indoors, outdoors shaded or outdoors direct sunlight

Environment: Corrosive, dust, grit, dirt, oily-cutting fluids, washdown, dripping water, freezing rain or other

Open Loop _____ or Closed Loop _____ System

Enclosure

Size: _____ H x _____ W x _____ D = _____

Determine the area that allows heat transfer and identify any dimensional limits of thermal system.

Type Rating: _____ (Typically Type 1, 3R, 12, 4, or 4X)

Enclosure finish/color: _____

(external color will effect solar load if in direct sunlight; if internal finish is metallic, the passive cooling of the enclosure is less)

Equipment

Internal Heat Load: _____ (determine the full-load heat produced by the major power-consuming components; then add an additional 25 percent for passive components and connections)

Determine the level of protection the equipment needs based on the environment.

Identify the most sensitive components relative to temperature or humidity and determine the upper and lower temperature extremes.

Available Power: _____ Volts

Temperature Limits

Cooling Extremes

_____ Maximum temperature outside the enclosure

_____ Maximum allowable temperature inside the enclosure (85–95 F is a typical value used to provide a reliable system and maximize the system's life)

Heating Extremes

_____ Minimum temperature outside the enclosure

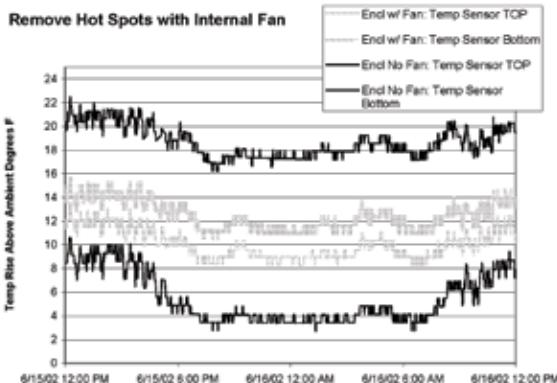

_____ Minimum allowable temperature inside the enclosure (heaters are frequently required to maintain temperatures above minimum start-up and to remove condensation)

Internal Circulating Fans

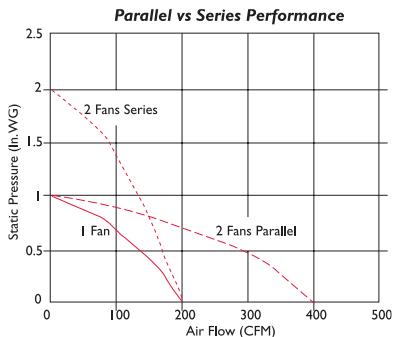

The use of circulating fans in an enclosure will improve heat dissipation by as much as 10 percent. Circulating fans are most commonly employed to eliminate hot spots inside an enclosure.

The graph below illustrates the temperature rise of two identical enclosures except one has an internal circulating fan. Each enclosure has two temperature sensors, one located near the top and the other near the bottom. The top and bottom black curves reflect the temperature in the enclosure without an internal fan. Adding a circulating fan removed the heat stratification.

Multiple Air Movers for Open Loop Systems

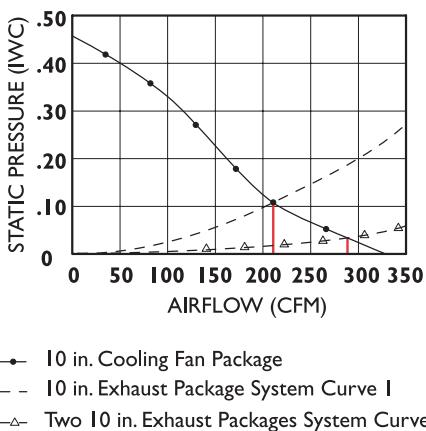

Air movers can be combined in series or parallel, as this may provide the optimum solution. In addition, a degree of redundancy in the event of fan failure can be a benefit. The graph illustrates how airflow performance changes when air movers are placed in series or parallel with one another in a system.

Multiple Exhausts for Open Loop Systems

This performance curve shows that adding a second 10-in. exhaust package provides an increase in airflow from 215 CFM to 290 CFM. The intersection point of the fan curve and the system curve approximates the CFM performance.

Performance Curve for a 10" Cooling Fan Package and System Curve With Exhaust Grills

Acoustical Noise

Acoustical noise is typically measured by the Sound Pressure Level (L_p), expressed in decibels and is dependent upon the distance from the source as well as its surroundings.

The Sound Pressure Level is defined as:

$$L_p = 10 \log \left(\frac{p^2}{p_0^2} \right)$$

Where:

L_p = Sound pressure level (dB)

p = Measured sound pressure (Pascals)

p_0 = Sound reference level $20 \mu\text{N}/\text{m}^2$

Noise Generated by Air Movers

There are many different ways to reduce the noise generated by an air mover. Some of the more common are:

- Avoid obstructions to airflow
- Run larger fans at lower speeds
- Lower the system impedance
- Minimize inlet losses and obstructions

The most significant factor influencing the noise from a given air mover is the speed of rotation. This is given by the following equation:

$$dB_2 = dB_1 - 50 \log \left(\frac{rpm_1}{rpm_2} \right)$$

Where:

dB = Sound pressure of the air mover operating at rpm ,

dB_1 = Sound pressure of the air mover operating at rpm_1

rpm_1 = Operating speed of impeller at condition 1

rpm_2 = Operating speed of impeller at condition 2

Therefore, a blower at half speed will be 15 dB quieter than at full speed. Airflow will also be half and, since static pressure is a squared function of speed, it is reduced by a factor of four.

Decibel Loudness Comparisons

Decibels (dBA)	Loudness Comparisons
10	Grand Canyon at night
20	Quiet basement
30	Quiet bedroom (at night)
40	Typical living room
50	Background music
60	Average human voice
70	Airplane interior noise
75	EPA recommends protection for 8-hour exposure
80	Kitchen garbage disposal
90	Lawn mower
100	Leafblower
110	Rock concert
115	OSHA forbids unprotected exposure

Sound and Distance **When the distance from a Point source doubles, the sound level decreases six decibels.**

Sound Level	Distance
95 decibels	50 feet
89 decibels	100 feet
83 decibels	200 feet

Addition and Subtraction of Decibel Levels **Doubling sound energy yields an increase of three decibels. In this example, each source is 50dBA. Note the characteristics of logarithmic addition or subtraction of decibel levels.**

Number of Sources	Decibel Level
1	50 dBA
2	53 dBA
4	56 dBA
8	59 dBA

Air Conditioners Sizing and Selection

Air Conditioners Sizing and Selection Overview

Before choosing a thermal management solution, you need to carefully consider the specifics of your application in addition to the following factors:

- Fan packages and blowers may introduce ambient contaminants like oil mist and dust into the enclosure
- Heat exchangers cannot cool below the ambient temperature
- Closed-loop air conditioners (this section) can cool below ambient temperature and reduce humidity without introducing contaminants
- Simple ventilation devices such as louvers or grilles and filters are appropriate if maintaining a cool, constant temperature is not a critical factor

Once you have determined the proper form of cooling equipment you need, select the required cooling capacity as outlined in this section.

How to Read Air Conditioner Catalog Numbers

CR43 - 06 - 1 - 6 - 002

CR43 = Identifies the type/family of air conditioner and the approximate height (i.e., CR43 = CR family, about 43-in. high).

06 = This is the air conditioner's listed capacity in BTU/Hr.
(i.e., 06 = 6000 BTU/Hr.)

1 = 115 Volt; 2 = 230 Volt; 4 = 460 Volt

6 = 50/60 Hz or 60 Hz (depending on unit, see Design Data); 5 = 50 Hz

002 = Unique set of numbers for each air conditioner which identifies the accessories on a model.

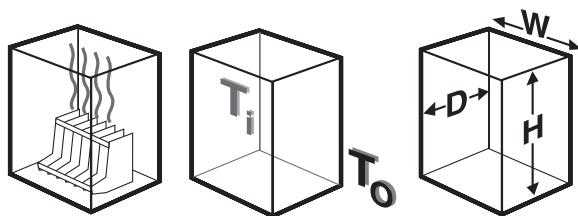

Thermal Management Sizing and Selection Software

Designed to assist you in determining the most suitable choices of air conditioners, heat exchangers or fans for your application. Download a free copy of our selection software by visiting our web site: hoffmanonline.com. Click on **Thermal Management** chapter.

Air Conditioners Sizing and Selection

Air Conditioner Sizing

Air conditioners are appropriate for applications in which:

- The temperature inside the enclosure must be maintained at or below ambient temperature.
- Humidity must be removed from the enclosure.
- Ambient air contaminants must be kept out of the enclosure.

The following air conditioner sizing procedure applies to uninsulated, sealed and gasketed enclosures in indoor locations.

Step 1. Determine the internal heat load in watts (W)

Add the maximum heat output specifications for all equipment to be installed in cabinet.

Conversion: 1 W = 3.413 BTU/hr.

Step 2. Determine the desired temperature difference (ΔT) between the ambient temperature and the temperature inside the cabinet

Subtract the desired maximum temperature inside the cabinet (T_i) from the maximum expected temperature (T_o) outside the cabinet.

$$T_o - T_i = \Delta T$$

Conversion: 1 K or C ΔT = 1.8 F ΔT

Step 3. Determine the exposed surface area of the cabinet in square feet.

Use the following formula to determine area when H, W and D are the cabinet dimensions in inches.

$$2[(H \times W) + (H \times D) + (W \times D)] \div 144 = \text{Area (ft.}^2\text{)}$$

Conversion: If dimensions are in millimeters, substitute 1,000,000 for 144. Then multiply the result by 10.76 to convert from m² to ft.²

Step 4. Determine the air conditioner capacity required

Use the following formula:

$$(\text{Watts} \times 3.413) + [(1.25 \times \text{Area in ft.}^2) \times \Delta T \text{ in F}] = \text{BTU/hr.}$$

Required air conditioner capacity in BTU/hr.

Use this formula to determine the required cooling capacity needed to maintain the desired operating temperature for your enclosure. This selection procedure applies to uninsulated, sealed, gasketed enclosures in indoor locations.

All industrial air conditioners are rated at their maximum operating point. Operating an air conditioner at temperatures below maximum conditions will result in reduced cooling capacity. In other words, operating 95 F ambient and 95 F enclosure temperature results in a 10 percent to 20 percent reduction in the rated capacity.

Full cooling capacity is probably not necessary at lower ambient temperatures.

Air Conditioners**SPECTRACOOL™ Air Conditioners - 4,000 and 6,000 BTU**

- Exterior and partial recessed mounting options
- Attractive industrial design with minimal use of visible fasteners
- Reliable mechanical thermostat on enclosure side of the unit. Indoor Air Conditioner models include digital display on ambient side.
- Galvanized sheet-metal cover for rugged factory and outdoor environments
- Easy-mount flanges for simple installation
- Cut-out adapter options for enclosures with McLean GENESIS® and T-Series air conditioners, enabling users to easily transition to the new unit
- Dust-resistant condenser coil allows the unit to be run filterless in most applications
- Cleanable, reusable aluminum mesh filter to protect coils for maximum cooling performance
- Mounting hardware, gaskets and user manual furnished with the unit
- Every unit functionally tested before shipping
- Standard Indoor Air Conditioner models also include:
 - Active condensate management with heater strip
 - Power-off relay for door switch and other system requirements
 - Malfunction switch
- Standard Outdoor Air Conditioner models also include:
 - Telcordia GR-487 capable
 - Corrosion-resistant components
 - Malfunction switch
 - Compressor heater
 - Head pressure control
 - 2000 Watt enclosure heater

Industry Standards

UL/cUL Listed Type 12, 3R, 4

CE
IP 56 Internal Loop
IP 34 on External Loop
Telcordia GR-487 capable (Outdoor)

Application

- Industrial automation
- Telecommunications equipment
- Waste water treatment systems
- Package handling equipment
- Security and defense systems
- And more

Features

- Energy efficient rotary compressor
- R407c and R134a earth-friendly refrigerants and RoHS compliant
- Models for 115, 230 and 400/460 3-phase AC volt power input
- UL Listed to save customers time and money with agency approvals
- Outdoor model operating temperature range from -40 F/-40 C to 131 F/55 C

Indoor Cutout Adapter, part number 28621601, enables SPECTRACOOL to be mounted to a GENESIS M28 Air Conditioner cutout.

Outdoor Cutout Adapter, part number 28621603, enables SPECTRACOOL to be mounted to a T-Series T29 Air Conditioner cutout.

460 V, 3-phase units use R134a refrigerant

Air Conditioners

SPECTRACOOL™ Air Conditioners - 8,000 and 12,000 BTU

- UL Listed to save customers time and money with agency approvals
- Outdoor model operating temperature range from -40 F/-40 C to 131 F/55 C
- Exterior and partial recessed mounting options
- Attractive industrial design with minimal use of visible fasteners
- Reliable mechanical thermostat on enclosure side of the unit. Indoor Air Conditioner models include digital display on ambient side.
- Dual condenser-side air movers for performance redundancy
- Galvanized sheet-metal cover for rugged factory and outdoor environments
- Easy-mount flanges for simple installation
- Cut-out adapter options for enclosures with McLean GENESIS® and T-Series air conditioners, enabling users to easily transition to the new unit
- Cleanable, reusable aluminum mesh filter to protect coils for maximum cooling performance
- Mounting hardware, gaskets and user manual furnished with the unit
- Every unit functionally tested before shipping
- Standard Indoor Air Conditioner models also include:
 - Active condensate management with heater strip
 - Power-off relay for door switch and other system requirements
 - Malfunction switch
- Standard Outdoor Air Conditioner models also include:
 - Telcordia GR-487 capable
 - Corrosion-resistant components
 - Malfunction switch
 - Compressor heater
 - Head pressure control
 - 2000 Watt enclosure heater

Industry Standards

UL/cUL Listed Type 12, 3R, 4

CE
IP 56 Internal Loop
IP 34 on External Loop

Air Conditioners

Outdoor Air Conditioners T43, T50 and T53 Series 6,680-20,000 BTU/Hr.

Features

- Equipped with head pressure control for low ambient operation, compressor heater, coated condenser coil and thermostat
- Surface and internal recess mounting capabilities
- Equipped with a screwdriver-adjustable thermostat
- EMI/RFI noise suppressor is standard
- Reusable and washable air filter
- Broad operating range of -40 F (-40 C) to 131 F (55 C)
- Includes power cord with plug
- Built-in hanging brackets
- High performance, industrial grade and efficiency fans
- Hardware, gasket and instruction manual furnished
- In accordance with the Montreal Protocol, the T53 GENESIS™ Air Conditioners have transitioned away from R22 refrigerant. Product performance remains within nominal capacity.

Industry Standards

Galvanized versions maintain UL/cUL Type 12, 3R or 4 rating when properly installed on UL/cUL Type 12, 3R or 4 rated enclosure.
Stainless steel versions maintain UL/cUL Type 12, 3R or 4X rating when properly installed on UL/cUL Type 12, 3R or 4X rated enclosure.

UL/cUL Listed, UL File Number SA6453

CE

Application

Outdoor Air Conditioners provide high-efficiency positive cooling for wall-mount and stand-alone enclosures. Designed for outdoor applications requiring up to UL Type 4X rating.

Application

In indoor industrial applications, the Side-Mount Subcompact Air Conditioner provides high-efficiency, positive cooling for densely-populated wall-mount and narrow enclosures that require a high degree of heat dissipation.

Features

- Equipped with a screwdriver-adjustable thermostat
- High-performance, industrial-grade ball-bearing fans
- Reusable and washable air filter
- Built-in hanging brackets
- EMI/RFI noise suppressor is standard
- Includes power cord with plug for standard grounded outlet
- Condensate management system with base pan side drain
- All units use a universally accepted CFC-free or environmentally safe refrigerant
- Mounting hardware, gaskets, mounting template and instruction manual furnished
- Closed-loop cooling

Finish

RAL 7035 light-gray polyester powder coating

GENESIS™ Side-Mount Compact Air Conditioner

**Industry Standards**

Maintains U/cUL Type 12 rating when properly installed on a UL/cUL Type 12 enclosure.

UL/cUL Listed; File No. SA6453

CE

Application

13 Series and 17 Series compact air conditioners cool 25- to 40-cu. ft. enclosures in indoor applications.

Features

- High-performance, industrial-grade ball-bearing fans
- Removable air filter and grille
- Built-in hanging brackets
- All units use a universally accepted CFC-free or environmentally safe refrigerant
- Mounting hardware, gaskets, mounting template and instruction manual furnished
- Closed-loop cooling

Finish

- Body: RAL 7042 smooth gray polyester powder coating
- Grille: RAL 7035 light gray

Notes

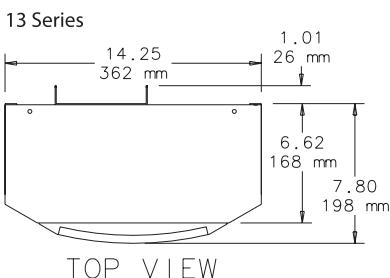

Hoffman side-mount models are directly interchangeable with comparable Slimboy and GENESIS models.

Maintains UL/cUL Type 12 rating when properly installed on a UL/cUL Type 12 enclosure.

UL/cUL Listed; UL File No. SA6453

CE

Application

Less than 12-in. deep, the 28 Series, 33NSM Series and 36N Series Air Conditioners offer a broad capacity range for applications requiring narrow enclosures.

Features

- Thermostat control
- High-performance, industrial-grade ball bearing fans in the 33 NSM and high performance centrifugal blowers in the 28 and 36N
- Removable air filter
- Built-in hanging brackets
- EMI/RFI noise suppressor is standard
- Unique condensate management system
- All units use a universally accepted CFC-free or environmentally-safe refrigerant
- Mounting gaskets and instruction manual furnished
- In accordance with the Montreal Protocol, the GENESIS™ 36 Series Air Conditioners have transitioned away from R22 refrigerant. Product performance remains within nominal capacity.

Finish

GENESIS™ 3-Phase 460-Volt Side-Mount Full-Size Air Conditioner

**Industry Standards**

Maintains UL/cUL Type 12 rating when properly installed on a UL/cUL Type 12 enclosure.

UL/cUL Listed; File No. SA6453

CE

Application

The efficient 3-phase, 460-volt compressor in the Genesis™ Full-Size Air Conditioner eliminates the need for additional transformers to cool controls in industrial, large enclosure applications.

Features

- Thermostat control
- Digital display of enclosure temperature
- High-temperature alarm
- High-performance centrifugal blowers
- Removable air filter
- Mounting brackets
- EMI/RFI noise suppression is standard
- Unique condensate management system
- All units use a universally accepted CFC-free or environmentally safe refrigerant
- Mounting gaskets and instruction manual furnished
- Closed-loop cooling

GENESIS™ Top-Mount Series Air Conditioner

**Industry Standards**

Maintains UL/cUL Type 12 rating when properly installed on a UL/cUL Type 12 enclosure.

UL/cUL Recognized; File No. SA6453

CE

Application

The Top-Mount GENESIS™ Air Conditioner is ideal for applications that have little or no clearance around the sides of an enclosure.

Features

- Removable air filter
- High-performance CFM ball-bearing centrifugal blowers
- Unique condensate management system
- All units use a universally accepted CFC-free or environmentally safe refrigerant
- Mounting gaskets and instruction manual furnished
- Closed-loop cooling

Finish

- Body: RAL 7042 smooth gray polyester powder coating

Air Conditioners

CR Compact, Mid-Size and Full-Size Air Conditioners and Accessories

■ Shield maintains UL/cUL Type 4X rating. (Package 6)
Ambient air enters from the bottom.

**Industry Standards**

Refer to tables for specific UL/cUL Type ratings these air conditioners maintain when properly installed on a UL/cUL rated enclosure.

UL/cUL Listed; File No. SA6453

CE

Application

CR Air Conditioners are available in a variety of configurations and sizes to match indoor or outdoor application requirements. CR23 and CR29 Air Conditioners feature an invertible, washable filter for easy maintenance.

Features

- Thermostat control and EMI/RFI noise suppressor included
- Front cover hinges open for quick access to all components
- Filter can be inverted to double operating time between cleanings and or replacements (models CR23 and CR29 only)
- Filterless operation possible in many applications
- Mounting flanges facilitate installation on door, side or front of enclosure

- For a typical application, unique condensate management system evaporates moisture from enclosure
- High-performance fans and blowers are ideal for densely-packed enclosures
- All units use a CFC-free or environmentally safe refrigerant that is universally accepted
- Mounting hardware, gaskets, mounting template and instruction manual furnished
- In accordance with the Montreal Protocol, the CR43 Air Conditioners have transitioned away from R22 refrigerant. Product performance remains within nominal capacity.

Finish

Available in brushed stainless steel or RAL 7035 light-gray polyester powder coating.

Notes

Some packages are not listed. Verify package before ordering.

Replacement Filter No. 10100044

Air Conditioners**Closed Loop Cooling**

Within the air conditioner, the recirculated clean air is kept separate from the ambient airflow system. This protects the electronic controls and prevents shutdowns caused by heat, humidity, dust and other contaminants.

Vortex Cooling System

Industry Standards

NEMA Type 4 Models:

Maintains UL/cUL Type 4 when properly installed on a UL/cUL Type 4 enclosure.

UL508 Listed; Type 4; File No. E187045

NEMA Type 4X Models:

Maintains UL/cUL Type 4X when properly installed on a UL/cUL Type 4X enclosure.

UL508 Listed; Type 4X; File No. E187045

NEMA Type 12 Models:

Maintains UL/cUL Type 12 when properly installed on a UL/cUL Type 12 enclosure.

UL508 Listed; Type 12; File No. E187045

Application

Powered by compressed air, Vortex Cooling Systems generate chilled air to cool small enclosures without refrigerants or moving parts. These systems are exceptionally reliable and low maintenance, even in the harshest and dirtiest environments.

Features

- Five-micron airline filter, 115 V solenoid
- Thermostat
- Ducting kit
- Cooling capacities to 2500 Btu/Hr. (733 W)

Finish

Brushed satin aluminum or stainless steel

Accessories

(for the enclosure)

Can be installed on all enclosure product families. Separate VCOOL accessories include an in-line oil filter.

Notes

Manufactured for Hoffman by ITW Vortec.

Thermal Management: Air Conditioners

Vortex Cooling Systems and Accessories

Notes

Heat Exchangers Sizing and Selection Overview

Before choosing a thermal management solution, you need to carefully consider the specifics of your application in addition to the following factors:

- Fan packages and blowers may introduce ambient contaminants like oil mist and dust into the enclosure
- Heat exchangers (this section) cannot cool below the ambient temperature
- Closed-loop air conditioners can cool below ambient temperature and reduce humidity without introducing contaminants
- Simple ventilation devices such as louvers or grilles and filters are appropriate if maintaining a cool, constant temperature is not a critical factor

Once you have determined the proper form of cooling equipment you need, selecting the required cooling capacity is outlined in this section.

When Should You Use a Heat Exchanger?

A heat exchanger is recommended when:

- ambient air contaminants must be kept out of the enclosure
- the integrity of the enclosure must be maintained
- temperature slightly above ambient inside the cabinet is acceptable
- humidity is not a factor

How to Read Heat Exchanger Catalog Numbers

XR - 29 - 18 - 1 - 6 - 012

XR = Heat Exchanger Series; XR Modified Heat Pipe Core heat exchanger

29 = Approximate height of the heat exchanger (i.e., 29 = 29-in. high)

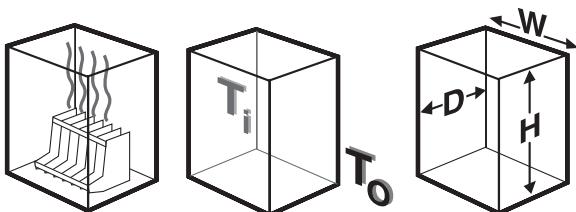

18 = Capacity in W/°F

1 = 115 V, 2 = 230 V

6 = 50/60 Hz

012 = UL Type

Heat Exchanger Sizing

1. Determine internal heat load in Watts (W).

1 W = 3.413 BTU/Hr.

Determine the internal heat load produced by equipment as total operating Watts.

2. Determine desired temperature difference in degrees F.

$1K \Delta T = 1.8 F \Delta T \quad K \Delta T = ^\circ C \Delta T$

Determine the ΔT (°F), the temperature difference between the maximum temperature outside the enclosure (T_o) and the maximum desired temperature inside the enclosure (T_i), which can be calculated as:

$T_i - T_o = \Delta T$ for heat exchangers.

3. Determine exposed surface area of the enclosure in square feet.

Area (ft.²) 1 m² = 10.76 ft.²

Calculate the exposed surface area of the enclosure in Square Feet:

Area (ft.²) = $2[(H \times W) + (H \times D) + (W \times D)] \div 144$

where "H", "W", and "D" are the dimensions of the enclosure.

4. Determine required heat exchanger performance rating.

$Watts \div \Delta T(^{\circ}F) - [0.22 \times Area (ft.^2)] = Watts/^{\circ}F$

Use this formula to determine the required cooling capacity needed to maintain the desired operating temperature for your enclosure. This selection procedure applies to uninsulated, sealed, gasketed enclosures in indoor locations.

It is recommended that the average "Air In" rating be used when sizing an application. However, it may be possible to use a lower-rated heat exchanger by locating the most heat-sensitive components in line with the "Air Out" opening of the heat exchanger. The actual performance rating of any heat exchanger may vary slightly because of the airflow impedance of the specific electronics configurations.

Heat Exchangers

CLIMAGUARD™ Outdoor Heat Exchangers

Industry Standards

Maintains UL/cUL Type 4, 12, 3R rating when properly installed on the appropriate UL/cUL Type 4, 12, 3R enclosure.

UL/cUL Listed, UL File No. SA7402

Application

The CLIMAGUARD™ Outdoor Heat Exchanger is a rugged and reliable unit engineered for temperature extremes, corrosive environments and wind-driven rain. Its design keeps enclosures sealed tight for reliable closed-loop cooling while ensuring vital electronics stay protected.

Features

- Removes up to 3000 W of enclosure heat
- Available in DC and AC power supply
- Cooling capacities ranging from 25 W/°C (14 W/°F) and 150 W/°C (83 W/°F)
- Variable-speed blowers standard on DC-powered units
- Surface- and recess-mount capable
- Gasket and hardware included
- Few moving parts
- Double-sealed core ends
- Closed-loop cooling

Specifications

- Powder-coated galvanized sheet metal shroud
- Corrosion-resistant aluminum core

Finish

RAL 7035 smooth light-gray polyester powder coating

Accessories

Ambient-side insect screen

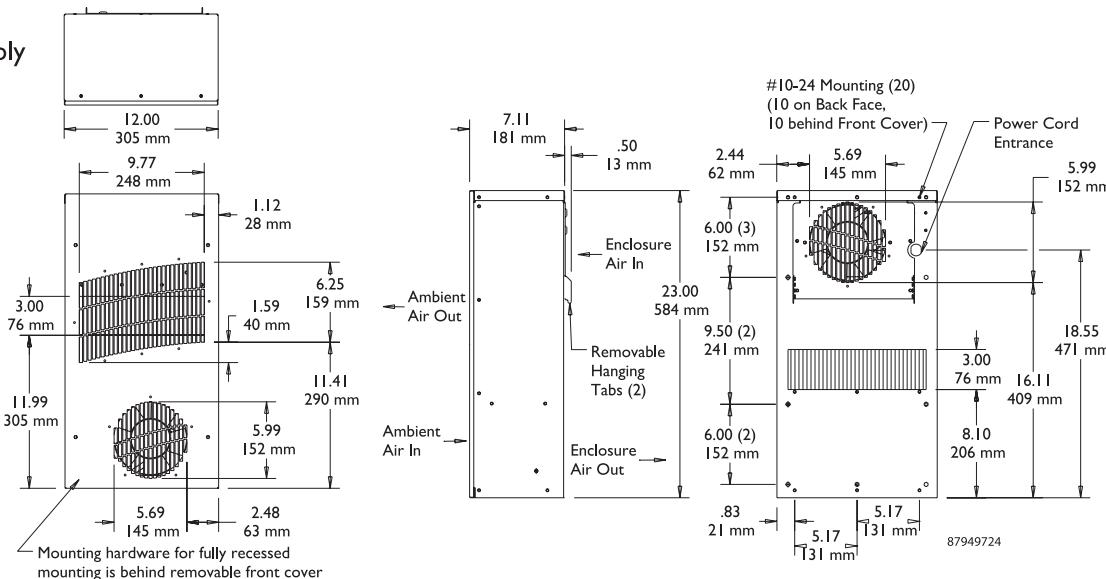

Up to 2000 Watt heater for DC and AC models

Heat Exchangers

XR Series Compact and Mid-Size Heat Exchanger

Industry Standards

Maintains UL/cUL Type 12 rating when properly installed on a UL/cUL Type 12 enclosure.

Maintains Type 3R rating when mounted externally and in a vertical position on a UL/cUL Type 3R enclosure.

XR200416012 and XR200426012 do not carry Type 3R rating.

UL/cUL Listed; File No. SA7402

CE

Application

Available in several sizes, these high-efficiency, streamlined heat exchangers are designed for use on narrow or shallow enclosures.

Application Tip

Locate heat-sensitive components in line with the "Air Out" opening of the heat exchanger.

Features

- Unique cores include modified heat pipe core on XR20 and XR2908 and counterflow aluminum core on XR2918, XR47 and XR60
- Top-quality ball-bearing fans
- Streamlined aesthetics with no visible mounting rails or fasteners
- Front cover hinges
- Filterless design; the core slides out for easy cleaning
- Mounts vertically or horizontally on front, side or top of enclosure, inside or outside of enclosure
- Mounting gaskets and instruction manual furnished
- DC voltage available if required. Please contact Hoffman.
Service cord provided includes appropriate plug:
- NEMA 5-15P for 115V units
- NEMA 6-15P for 230V units

Finish

Coated with RAL 7035 polyester powder paint inside and out

Notes

Hoffman XR units are directly interchangeable with ProAir models.

The "enclosure air in" efficiency rating is based on air entering the heat exchanger from the enclosure. The "enclosure air out" efficiency rating is based on air exiting the heat exchanger into the enclosure. All XR exchanger units are rated at 100 F/38 C ambient temperatures with 1500 W internal heat load. Heat exchanger efficiency will decrease as ambient temperature and/or internal heat load decreases.

Fans, Blowers, Louvers and Vents Sizing and Selection

Fans, Blowers, Louvers and Vents Overview

Before choosing a thermal management solution, you need to carefully consider the specifics of your application in addition to the following factors:

- Fan packages and blowers may introduce ambient contaminants like oil mist and dust into the enclosure
- Heat exchangers (this section) cannot cool below the ambient temperature
- Closed-loop air conditioners can cool below ambient temperature and reduce humidity without introducing contaminants
- Simple ventilation devices such as louvers or grilles and filters are appropriate if maintaining a cool, constant temperature is not a critical factor

Once you have determined the proper form of cooling equipment you need, selecting the required cooling capacity is outlined in this section.

Determine the Required Fan/Blower Size (Volume Airflow)

Step 1. Select the product family which best fits your application:

- Compact Cooling Fans (economical fan with no filter)
- Cooling Fan Packages (economical fan package with low-density filter)
- Type 12 Cooling Fan Package
- Filter Fan Packages (high-tech fan package with high-density filter, for IP54 rating)
- Blower Package (centrifugal blower package with filter for densely packed enclosures)

Step 2. Determine the internal heat load in Watts (W).

1 W = 3.413 BTU/Hr.

Step 3. Determine desired temperature difference in degrees F.

Determine the ΔT (F), the temperature difference between the maximum temperature outside the enclosure (T_o) and the maximum desired temperature inside the enclosure (T_i).

$$T_o - T_i = \Delta T \text{ for heat exchangers and fans}$$

NOTE: 1 C $\Delta T = 1.8 F \Delta T$

Step 4. Plot your application using the selection graph to the right.

- Find Watts (internal heat load) on the vertical scale
 - Draw a horizontal line across to the intersection point with the diagonal line representing your ΔT
 - Extend a vertical line down to the horizontal scale to determine your CFM requirement
 - Continue the vertical line to identify applicable fan or blower
- A sample line is shown in red for a 400 W heat load and a ΔT of 20 F, which indicates a 63 CFM airflow requirement.

Step 5. Make sure the line intersects the bar which includes the exhaust grille kit(s) from the product family chosen in Step 1.

Remember, actual airflow going through your enclosure may be less depending on how densely packed your enclosure is.

Fan output (CFM) is reduced by 10-15% when operated at 50 Hz.

Or calculate using the formula:

$$\text{CFM} = (3.16 \times W) / \Delta T (\text{°F})$$

Where:

Watts = Internal Heat Load in Watts

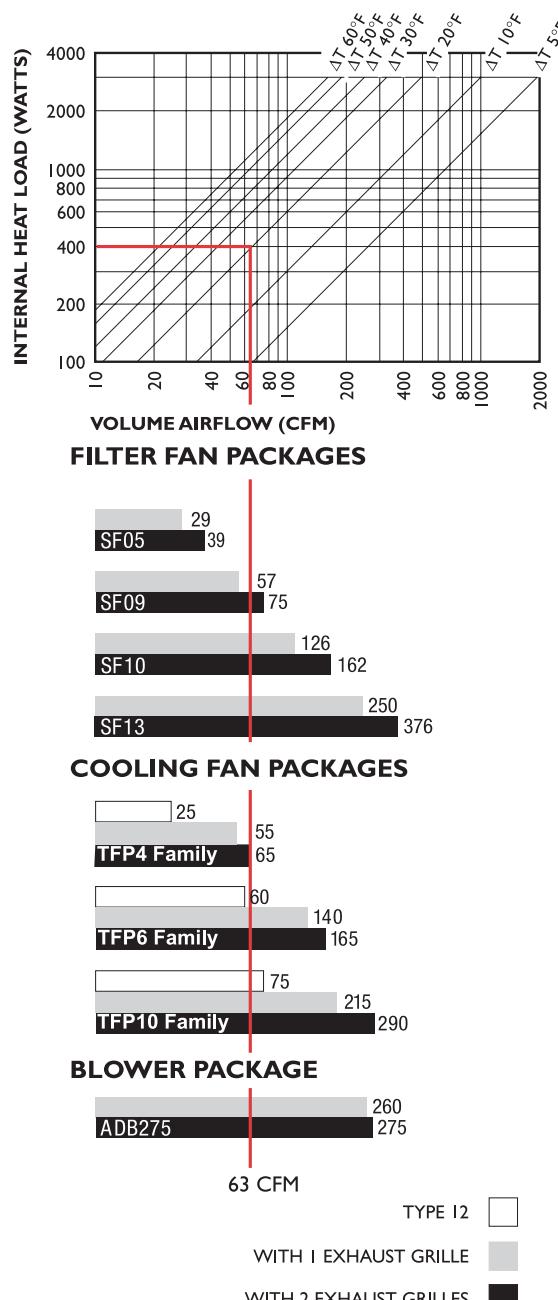

ΔT = Internal Temperature minus Ambient Temperature in °F

CFM = Required airflow in ft.³/min.

Example:

An internal heat load of 400 W requires airflow of about 63 CFM to maintain the enclosure at a ΔT of 20 F above the ambient temperature.

$$\text{CFM} = (3.16 \times W) / \Delta T (\text{°F}) \approx 63 \text{ CFM}$$

How to Read Filter Fan Package Catalog Numbers

Filter Fans

SF - 05 - 1 - 6 - 001

SF = Filter fan

05 = Approximate size of fan frame (i.e., 05 = 5")

1 = 115 Volt, or 2 = 230 Volt

6 = 50/60 Hz

001 = Standard model

Exhaust Grille Kit

SG - 0500 - 001

SG = Exhaust grille kit

0500 = Approximate size of fan frame (i.e., 05 = 5")

001 = Standard model

Louvers and Vents

Three styles of louvers and vents provide passive cooling.

Compact Cooling Fans

Can be installed on any surface of an enclosure. With the addition of accessory fan brackets, Compact Cooling Fans can also be installed in any position inside the enclosure for spot cooling or air circulation.

Features

- Maximum operating temperature is 158 F (70 C)
- 4-in. fan is thermally protected and uses permanently lubricated ball bearings
- 6- and 10-in. fans have ball-bearing construction and split-capacitor motors
- Split-capacitor motors are thermally protected to avoid premature failure
- Dynamically balanced impellers molded from polycarbonate material
- One finger guard is furnished (additional finger guards are available)
- All mounting hardware is provided

Fan bracket and additional finger guards must be purchased separately

- 240 and 560 CFM fans have ball bearing construction and split capacitor motors
- Fans have leadwires with ends stripped 1/2-in. (12-mm) or 6-ft. (1.8-m) cord with polarized plug for power connections

Industry Standards

UL Component Recognized

CSA certified

Application

Compact Cooling Fans are ideal for applications where enclosure space is limited and quiet, reliable cooling is required. Engineered for 50,000 hours of continuous operation without lubrication or service.

Installation

Consult your local Hoffman sales office for information on modifications to this product

Finish

Fan housing is black.

Cooling Fan and Exhaust Packages

Industry Standards

UL 508A Component Recognized, File Number E61997
TFP# Models: Type 1
TFP# UL 12 Models: Type 12

CSA certified (fan only)
CE

Application

Cooling Fan and Exhaust Packages are designed for limited-space enclosures that require a reliable and filtered airflow. Where positive airflow is not required, Exhaust Packages can be used on both the inlet and outlet.

Engineered for 50,000 hours of continuous operation without lubrication or service. For both Type 1 and Type 12 systems a monthly maintenance schedule is recommended to ensure optimal cooling performance.

Features

- Cooling Fan Package includes fan, air filter, composite air plenum, finger guard and grille
- Exhaust Package includes air filter, filter retainer with integral finger guard and grille
- EMC Upgrade Kit includes a grille standoff collar and a special EMC shielding grille
- Washable foam (Type 1) or disposable (Type 12) filter in fan. Optional washable aluminum air filter is available for Type 1 applications.
- Dynamically-balanced fan impellers molded from polycarbonate material
- 4-in. fan is thermally protected and uses permanently-lubricated ball bearings
- 6- and 10-in. fans have ball bearing construction and split-capacitor motors that are thermally protected to avoid premature failure

- Fans have leadwires for power connection with ends stripped 1/2 in. (12 mm)
- All mounting hardware and installation instructions are furnished

Filters

Standard Type 1 air filters are washable foam.

Type 12 air filters are not washable.

Installation

Fan and exhaust packages can be installed on any surface of an enclosure. They are most effective when the fan assembly is located on a lower panel of the enclosure and the exhaust grille is positioned near the top of the opposite side. This installation assists heat transfer by causing slightly more turbulence and also prolongs the working life of the fan since it is located in the path of the cooler air entering the enclosure.

The height and width of the cooling fans and exhaust grilles can be rotated 90 degrees for mounting on narrow enclosures. Allow adequate clearance for servicing the fan when equipment is installed inside the enclosure and for replacing filters on both the fan and the exhaust. Cutout dimensions for both the fan and the exhaust are shown in the order table. Order the fan and exhaust packages separately.

Finish

Stainless steel grilles have brushed finish.

ABS composite grille is black.

Accessories

Aluminum Type 1 and Hi-Density Type 12 Filters

EMC Upgrade Kit

Optional Grilles and Replacement Filters

Optional grilles offer the choice of stainless steel or black ABS plastic. These grilles replace the standard RAL 7035 gray composite or stainless steel grilles on both fan and exhaust packages. Standard replacement filters are washable foam (Type 1) or disposable (Type 12). To maintain UL Type 12 rating on the enclosure, UL Type 12 filters must be used on the fan package inlet. Washable aluminum filters are also available. Aluminum filters are compatible with Type 1 systems only.

Type 12 air filters are not washable.

TFLT10UL12	UL 12 filter replacement (5/package)a	10	—	—

Replacement filter for Type 12 fan package only (models TFF__UL12). For Type 12 exhaust package use replacement filter AFLTRX.

Filters fit all fan and exhaust packages according to their size.

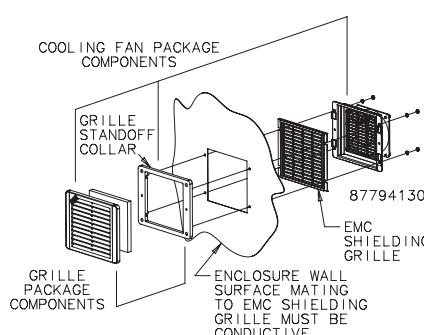

EMC Fan/Grille Upgrade Kit

With the addition of this kit, the cooling fan and exhaust packages are upgraded to provide EMC (electromagnetic compatibility) protection. Consult Hoffman for shielding effectiveness (dB attenuation vs. frequency).

Separate kits must be installed on both the inlet and outlet. Cooling fan and exhaust package must be ordered separately. EMC upgrade kit will not work with stainless steel grille option.

How to Choose a Filter Fan Overview

Three overall considerations are applied when selecting a filter fan:

- voltage input
- enclosure protection
- airflow requirement

Voltage Input

Narrowing the choice of filter fans based on voltage input is quite simple. If the voltage available in the electronics system to power the filter fan is AC, then an VAC filter fan is chosen. If the voltage for the application is DC, then a VDC filter fan is specified.

The voltage level of the filter fan's power input also needs to be taken into consideration. For example, if the voltage input is 115 VAC, then a 115 VAC filter fan should be specified. If the voltage input is 24 VDC, then a 24 VDC impeller is required. Filter fans are commonly available in 115, 230 and 460 3-phase 50/60 Hz VAC as well as 24 VDC. Some manufacturers such as Pentair Technical Products offer 48 VDC due to the trend toward using this power input in some electronic systems.

Enclosure Protection

Another important consideration is selecting a filter fan and exhaust grille that maintains the protection level of the electrical enclosure.

U.S. standards of protection generally include:

Type 1 – For indoor use to protect against contact with the enclosed equipment

Type 12 - For indoor use to protect against dust, falling dirt and dripping non-corrosive liquid such as water

Type 3R – For outdoor use to protect against rain and sleet

Type 4 – For outdoor or indoor use to protect against windblown dust and rain, splashing water and hose-directed water

Type 4X – For outdoor or indoor use to protect against corrosion, windblown dust and rain, splashing water and hose-directed water

European standards of protection include:

IP54 – Dust must not enter in sufficient quantity to interfere with the satisfactory operation of the equipment, complete protection against contact; water splashing against the enclosure from any direction shall have no harmful effect.

IP55 – Dust must not enter in sufficient quantity to interfere with the satisfactory operation of the equipment, complete protection against contact; and water projected by a nozzle against enclosure from any direction shall have no harmful effects.

IP65 – No ingress of dust; complete protection against contact; and water projected by a nozzle against enclosure from any direction shall have no harmful effects.

Airflow

Choosing a filter fan with the right airflow or cooling capacity is as important as voltage input and enclosure protection. However, the process is a little more involved.

Generally, smaller heat loads in the electronics system will require a filter fan with a lower airflow rate (CFM or M³/Hr.). Moderate to high heat loads will need a larger, more powerful filter fan or multiple filter fans to move enough air to cool the electronics components.

The following 5-step process results in a filter fan specification that should generally work in your electronics system.

1. Determine Delta-T
2. Determine Internal Heat Load
3. Determine Free Airflow
4. Estimate System Impedance
5. Select Your Filter Fan

These five steps yield a ballpark result. A filter fan sample should always be tested in the actual electrical system itself to confirm that its performance provides adequate airflow.

The next section outlines the 5-step filter fan selection process in more detail.

How to Derive Filter Fan Airflow

Step 1. Determine Delta-T (ΔT)

Delta-T is the difference between **maximum desired temperature for the electronics** and **maximum temperature outside the enclosure**. It is important to determine ΔT because cooler air will usually require less filter fan airflow whereas warmer air will typically require more airflow.

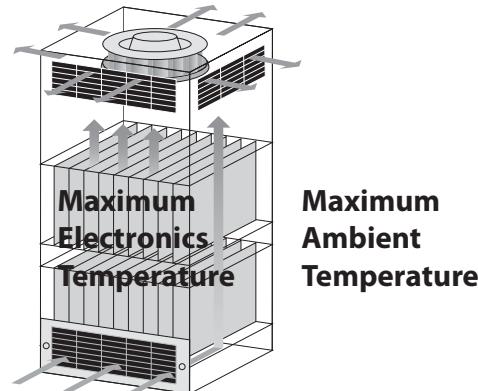

Maximum desired temperature for the electronics is identified by reviewing the component manufacturer's specifications. They will often indicate that the equipment should not operate above a certain temperature such as 35 C (95 F).

Maximum temperature **outside the enclosure** is determined by forecasting the highest potential temperature of the air around the electronics cabinet. If the application is in an indoor environment such as an air conditioned factory, the maximum temperature outside the enclosure is the temperature of the facility, such as 25 C (77 F). If the electronics system is outdoors, the maximum temperature around the cabinet is the hottest weather that the application experiences, which may be 45 C (116 F) if it's deployed on a roof top for example.

$$\Delta T = \text{maximum temperature desired for the electronics} - \text{maximum expected ambient temperature}$$

For example:

$$\begin{aligned}\Delta T &= \\ &35 \text{ C (95 F)} [\text{maximum electronics temperature}] - \\ &25 \text{ C} [\text{maximum ambient temperature}] \\ &\Delta T = 10 \text{ C (18 F)}\end{aligned}$$

Step 2. Determine Internal Heat Load

Heat load stems from the amount of waste heat generated inside the enclosure by the electronic components and is expressed in Watts. There are several methods to determine internal heat load, depending on data availability.

A. Heat Load Data from Each Electronics Component Manufacturer

One way to estimate internal load is to gather heat load data from the manufacturers of the electronics components inside the cabinet. If more than one control or other components are inside the enclosure, it will be necessary to add together the multiple estimates of heat load to determine total internal heat load.

B. Component Power – Component Efficiency

A second method is to establish the Watts of power used by each electronic component. Derive Watts by multiplying the amp draw of each device with its voltage. Then subtract the efficiency of each component from its estimated power use, adding up the outcomes for total internal heat load.

$$\begin{aligned}\text{INTERNAL HEAT LOAD} &= \\ &\text{COMPONENT POWER (W)} - \text{COMPONENT EFFICIENCY} \\ &\text{(for each electrical device)}\end{aligned}$$

For example:

An electronic system uses two components that draw 115 VAC at 9.5 A. Each has a rated efficiency of 90 percent (10 percent of each device is inefficient). Unused amounts of power become generated heat. Thus, the estimated internal heat load is:

$$\begin{aligned}\text{Device Power} &= 115 \times 9.5 = 1100 \text{ W} \\ \text{Total Power} &= 2 \times 1100 = 2200 \text{ W} \\ \text{Less Efficiency} &= 2200 \times (1 - .90) \\ \text{Total Heat Load} &= 220 \text{ W}\end{aligned}$$

C. Incoming – Outgoing Power

A third approach is to estimate the power going into the enclosure and the power coming out of it. The difference is the estimated amount of internal heat load. Multiply the amps and volts of each electrical line going in to determine Watts and then add them together. Do the same for the electrical line(s) coming out of the application. The outgoing watts are subsequently subtracted from the incoming watts.

$$\begin{aligned}\text{INTERNAL HEAT LOAD} &= \\ &\text{INCOMING POWER (W)} - \text{OUTGOING POWER (W)}$$

For example:

An enclosure has three input lines of 230 VAC at 11, 6 and 4 A. It has one output control line of 115 VAC at 9 A.

$$\begin{aligned}\text{Incoming Power} &= (230 \times 11) + (230 \times 6) + (230 \times 4) = 4830 \text{ W} \\ \text{Outgoing Power} &= (115 \times 9) = 1035 \text{ W} \\ \text{Total Heat Load} &= 4830 - 1035 = 3795 \text{ W}\end{aligned}$$

D. Automated Equipment Horsepower

The fourth method applies only to industrial automation equipment that operates with horsepower such as variable frequency drives (VFDs). 1 hp = 745.6 W. Thus, the internal heat load from a 3 hp VFD is 2237 W, less its efficiency which is typically 93 – 95 percent.

For example:

$$\begin{aligned}\text{A cabinet has three 5 hp VFDs with 95\% efficiency.} \\ \text{VFD Watts} &= 5 \text{ hp} \times 745.6 \times 3 = 11184 \\ \text{Adjusted Watts} &= 11184 \times (1 - .95) = 559 \\ \text{Total Heat Load} &= 559 \times 1.25 = 699 \text{ W}\end{aligned}$$

Note: 1.25 is an assumed "safety" margin for other minor heat-producing components.

Step 3. Determine Free Airflow

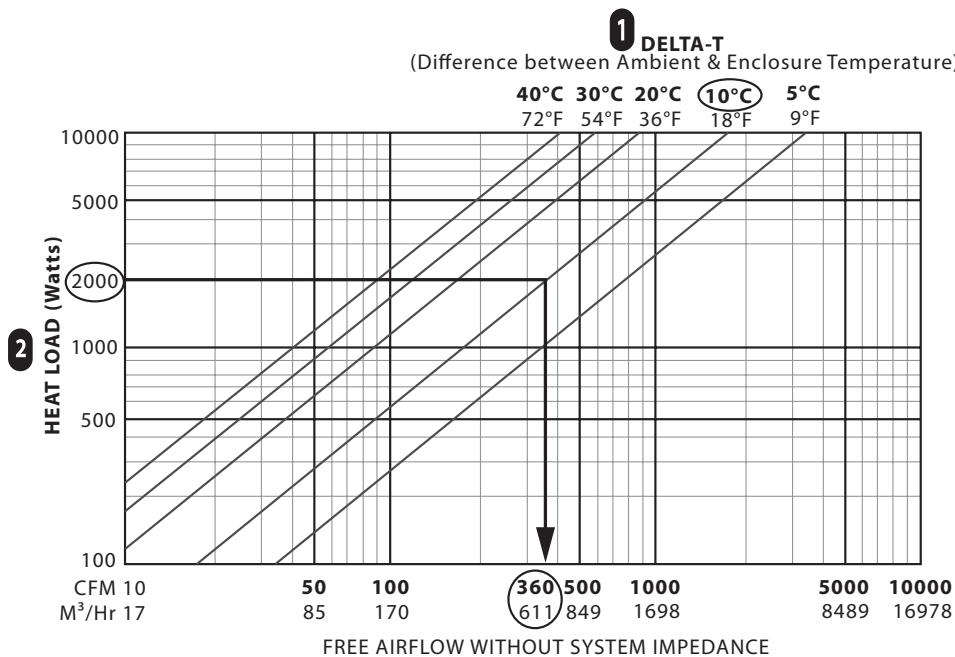

Determining free airflow applies the results from steps 1 and 2 to the chart below. Recall that free airflow is the unimpeded airflow through the enclosure without any interference from electronics components or filter fan exhaust grilles.

Select the diagonal ΔT line that closely matches the ΔT of your electronics system. Using the example from step 1, ΔT is 10 C (18 F).

Then find your cabinet's heat load along the Y-axis of the chart. In the example from step 2, heat load is 2000 W.

Find where heat load intersects with ΔT to determine free airflow on the X-axis. Continuing the example, free airflow in this case is 360 CFM or 611 M³/Hr.

Now we need to account for system impedance, i.e., the amount of airflow interference created by the electronic components inside the cabinet. A filter fan with **more than** 360 CFM or 611 M³/Hr. of free airflow will actually be needed for this system's design.

How to Derive Filter Fan Airflow

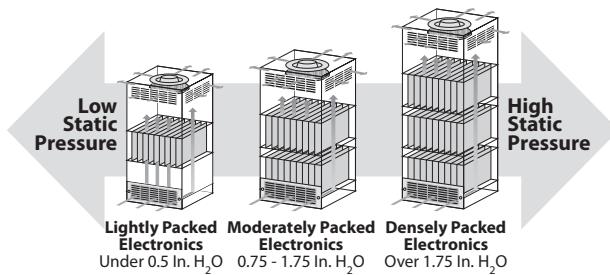

Step 4. Estimate System Impedance

Static pressure or system impedance can impact the cooling performance of an air mover. Filter fans work well in electrical cabinets with low static pressure such as a large enclosure with a bare drive and few other components. They do not have enough force to push air through a cabinet with a moderate or high system impedance.

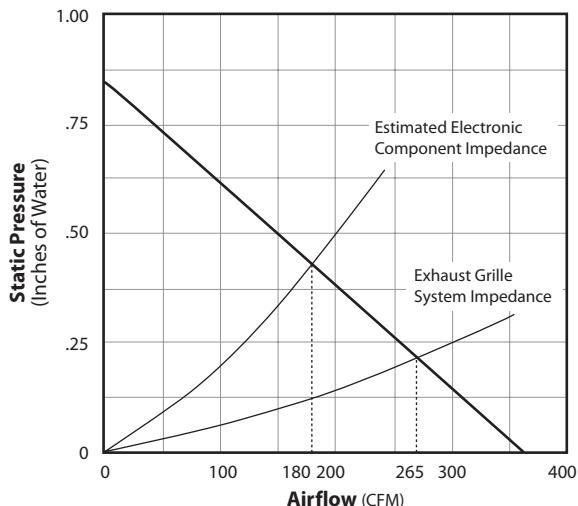

If your system design appears like the middle or right hand example, then a motorized impeller or blower is probably a better solution for the application than a filter fan.

Assuming a filter fan can cool your application, the exhaust grille and electrical components inside the enclosure will reduce airflow through the system. Filter fan manufacturers will show the effect of the exhaust grille on the performance curve. However, they do not indicate the impedance curve of the electronics system because filter fan makers do not know this information. Only the specifying electronics engineer or system designer can determine this. If it is not possible to measure the exact static pressure inside an electronics cabinet, you must make an estimate and draw an approximation.

In the example shown, the free airflow of a 376 CFM (638 M³/Hr.) filter fan decreases to 265 CFM with the exhaust grille kit and down to 180 CFM when used in an actual application. Thus, a filter fan model with a performance curve similar to the one in the next graph would be too small to keep our electrical system cool because our actual target airflow is 360 CFM.

Impact of System Impedance on Free Airflow of a 376 CFM (638 M³/Hr.) Filter Fan

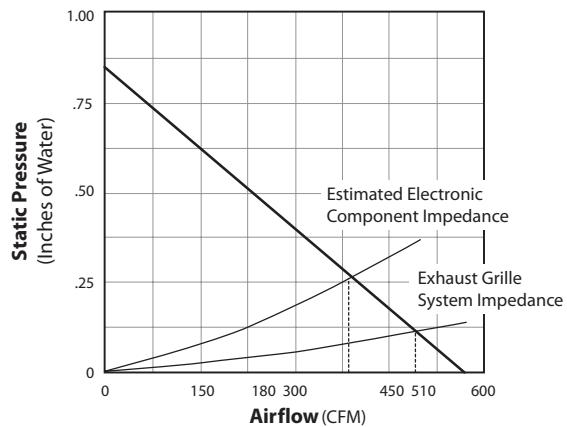

Step 5. Select Your Filter Fan

In this final step, we bring together the results of free airflow (step 3) and system impedance (step 4), using the filter fan performance charts. Applying the example, we need to select a motorized impeller that delivers a minimum of 360 CFM (611 M³/Hr.).

Identify alternative filter fan models with free airflow ratings that are greater than the step 3 outcome of 360 CFM (611 M³/Hr.) to compensate for airflow losses created by static pressure in the system. A judgmental system impedance curve is overlaid onto the performance charts of each of the optional filter fans, and then the model with the CFM or M³/Hr. closest to the target airflow is selected.

In the performance curve shown here, 571 CFM is commonly the largest filter fan in the electronics cooling industry. Based on the estimated electronic component impedance overlaid by our imaginary engineer, it should deliver the cooling performance required by the system.

Performance Curve of a 571 CFM (969 M³/Hr.) Filter Fan Exhaust Grille and Estimated System Impedance

A Friendly Reminder

This 5-step process for selecting a filter fan yields a ballpark result. Be sure to test a sample of the filter fan in the electrical system prototype at maximum ambient and heat load conditions to verify adequate cool airflow.

SF04 16 CFM (28 m³/hr.) Side-Mount Filter Fan

Features

- Free airflow up to 16 CFM (28 m³/hr.)
- Approximate size 4 in. (105 mm)
- Click-fit design quickly installs into enclosure wall; no tools or screws required
- Enclosure side wall mounting
- Standard foam-in-place gasket
- Similar cut-out sizes as other filter fan manufacturers
- Terminal wire connections
- Simple snap-open grille for easy filter replacement

Finish

- RAL 7035 light-gray, UV-resistant plastic standard
- RAL 9011 black, UV-resistant plastic optional

Notes

Order Exhaust Grille Kits separately.

ST10 100 CFM (170 m³/hr.) Thin Side-Mount Filter Fan

Features

- Free airflow up to 100 CFM (170 m³/hr.)
- Approximate size 10 in. (250 mm)
- Click-fit design quickly installs into enclosure wall; no tools or screws required
- Thin depth to minimize cabinet intrusion
- Enclosure side wall mounting
- Standard foam-in-place gasket
- Similar cut-out sizes as other filter fan manufacturers
- Terminal wire connections
- Simple snap-open grille for easy filter replacement

Finish

- RAL 7035 light-gray UV-resistant plastic standard
- RAL 9011 black UV-resistant plastic optional

Industry Standards

UL/cUL recognized, CE, CSA (fan motor only)

Type 12, IP54 standard
Type 12, IP55 optional

Notes

Order Exhaust Grille Kits separately.

SF13 376 CFM (638 m³/hr.) Side-Mount Filter Fan

Features

- Free airflow up to 376 CFM (638 m³/hr.)
- Approximate size 13 in. (325 mm)
- Click-fit design quickly installs into enclosure wall; no tools or screws required
- Enclosure side wall mounting
- Reverse airflow option to increase static pressure
- Standard foam-in-place gasket
- Similar cut-out sizes as other filter fan manufacturers
- Terminal wire connections
- Simple snap-open grille for easy filter replacement

Finish

- RAL 7035 light-gray UV-resistant plastic standard
- RAL 9011 black UV-resistant plastic optional

Industry Standards

UL/cUL recognized, CE, CSA (fan motor only)

Type 12, IP54 standard

Type 12, IP55 optional

Notes

Order Exhaust Grille Kits separately.

89051224

SR16 280 CFM (475 m³/hr.) Roof-Mount Filter Fan

Industry Standards

UL/cUL recognized CE, CSA (fan motor only)

Type 12, IP54 standard

Features

- Free airflow up to 280 CFM (475 m³/hr.)
- Approximate size 16 in. (420 mm)
- Enclosure roof mounting
- Bolt in place to ensure a tight seal
- Terminal wire connections

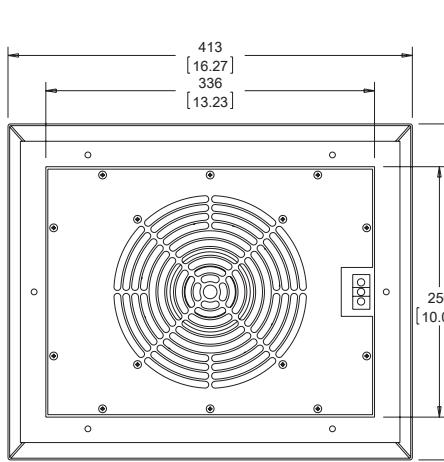

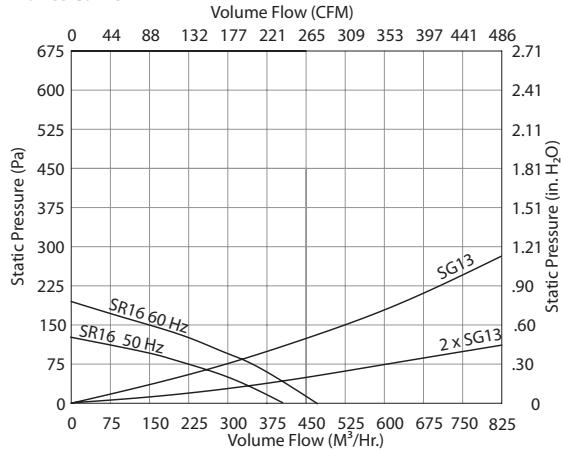

Finish

- RAL 7035 light-gray UV-resistant plastic standard
- RAL 9011 black UV-resistant plastic optional

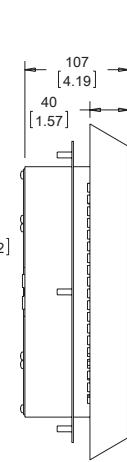

Bulletin: MCL

Wind-Driven Rain and Washdown Shroud

**Features**

- Protects filter fan and exhaust grille from wind-driven rain and high-pressure hose water
- Significantly reduces the possibility of enclosure water infiltration when used in combination with high-density IP55 Z-filter
- Sizes to cover SF05, SF09, SF10 and SF13 filter fans and SG05, SG09, SG10 and SFG3 exhaust grilles
- Mounts separately over filter fan and exhaust grille

Finish

- Stainless steel standard
- RAL 7035 light-gray on galvanized metal optional
- RAL 9011 black on galvanized metal optional

Outdoor Filter Fan and Exhaust Package

**Features**

- Ball bearing axial fan, service life minimum 50,000 hours at 77 F (25 C) and 65 percent RH
- Airflow 11.8 CFM (20 cubic meters/hour) free blowing
- High-impact plastic is highly weatherproof and resistant to UV light
- Removable F5 filter
- Lockable door in hood
- Two-sided tape provided
- Filter hood permanently fixed to enclosure from inside
- 2 lead wires, 3.94-in. (100-mm) long, with pressure clamps, 14 gauge max. (2.5 mm)
- Synthetic filter material, temperature resistant to 212 F (100 C), self-extinguishing class F1, moisture resistant to 100 percent RH
- Filter mat: Fine grade F5 to DIN EN779 filtering degree: 98 percent of particles larger than 10 µm (10 microns)

Industry Standards

CE

cURus File No. E234324

NEMA Type 3R
IEC/EN60529, IP55**Application**

This fan package meets basic requirements for outdoor or indoor applications that require warm air dissipation.

Blower Fan Package

Industry Standards

UL Component Recognized; File No. E61997

EIA RS-310-D
CSA certified
(blower motor only)

Application

For enclosure or 19-in. rack applications, the Blower Fan Package provides the maximum amount of cooling air in the least amount of space by utilizing 115 volt AC, 60/50 hertz, single-phase input power. Engineered for 20,000 hours of continuous operation when properly powered.

Features

- Intake grille is easily removed with two captive thumbnuts
- Washable aluminum filter
- Single phase motor powers the statically balanced blower
- Motor is thermally protected and cooled by incoming forced air
- Direct drive induction motor contains permanently lubricated ball bearings
- Lubricant protects from -20 F to 298 F (-29 C to 148 C)
- Rotating components are suspended on neoprene shock-mounts
- Three-conductor power cord (five feet long)

Installation

Can be mounted as shown below or installed on standard 19-in. (483-mm) racks. The unit is self-supporting with 16 gauge steel flanges notched per EIA RS-310-D. Two openings are required in the enclosure for air to flow in and out. Refer to drawings for size and location of openings. An exhaust grille and filter package (catalog number **AEXGR275**) is required and must be ordered separately. Consult your local Hoffman sales office for information on modifications to this product.

Specifications

- 16 gauge steel housing

Finish

Blower housing is black enamel.
Grille is brushed stainless steel.

AIR FLOW CFM

Exhaust Grille and Filter for Blower Package

Located at air discharge side of an enclosure using Blower Package ADB275. Polished stainless steel grille is 65 percent open and offers low resistance to airflow. Expanded aluminum filter (included with each grille) is easily removed for cleaning from outside the enclosure. Mounting hardware is furnished.

Bulletin: D85

Fan Accessories

Filter and Fan Airflow Monitor

Industry Standards

CE

cURus; File No. E250507

IEC EN60529, IP20

Application

The simple, reliable mechanical operation of the Filter and Fan Airflow Monitor makes it a viable alternative to electronic monitoring systems.

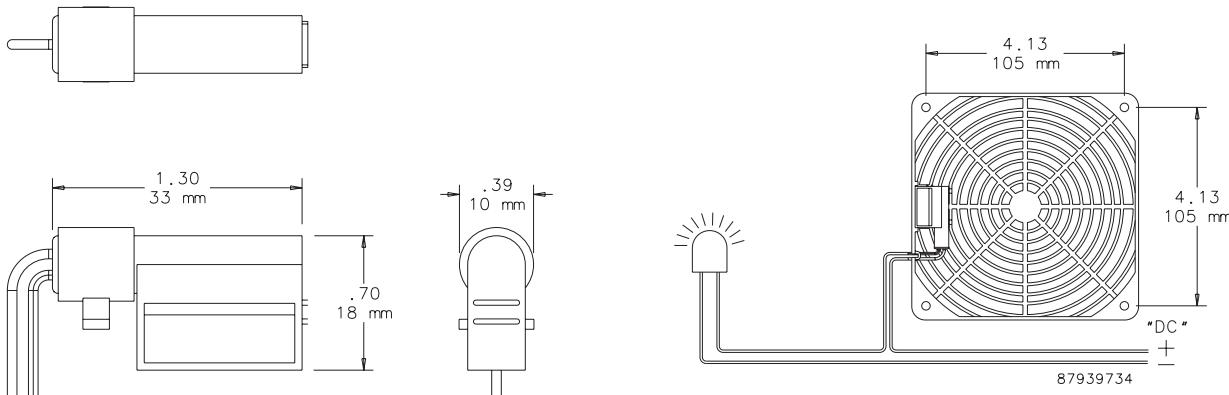

Features

- Service life is greater than 100,000 cycles
- Bi-directional switch activates an electrical contact if the airflow of the fan falls below 8.2 ft./sec.
- Monitors airflow to 164 ft./sec. (50 m/s) max.
- Reed/magnet contact
- Switching threshold of air flow speed > 8.2 ft./sec. (2.5 m/s)
- Maximum switching:
capacity = 10 W (resistive load)
voltage = NC: DC 240 V; NO: DC 60 V
current = NC: DC 500 mA; NO: DC 170 mA
- Hysteresis 3.3 ft./sec. (1 m/s) fixed
- Contact resistance, including wire, 370 mΩ
- 2 x single strand AWG 26 connection, 19.69-in. (500-mm) long;
0.20-in. (5-mm) tip of stranded wire stripped/tinned
- Mount with attachment clamp and/or clip or integrated in protective grille (see drawing)
- Mount airflow monitor opening perpendicular to airflow in dust-free and contamination-free environment
- AAFMCNC can be attached directly to cooling and exhaust package grilles
- AAFM120NO can be attached to any 4-in. standard fan

Finish

Black plastic, UL94H-B

Bulletin: D85

Description	Recommended Use
NC - Normally Closed - Contact opens when airflow greater than 8.2 ft./sec.	Use to turn an alarm or signaling device ON to indicate loss of air flow (less than or = 8.2 ft./sec.)
NO - Normally Open - Contact closes when air flow greater than 8.2 ft./sec.	Use to turn a signaling device ON to indicate sufficient airflow (great than 8.2 ft./sec.)

	Flap Position		Contact

Fan Speed Controls

Industry Standards

(both controls)

UL 508 Listed; File No. E249700

cUL Listed per CSA C22.2 No. 14; File No. E249700

Application

Perfect for offices, classrooms and other noise-sensitive areas, Fan Speed Controls optimize airflow in a cabinet or rack, balancing air volume requirements with noise level and power use.

Features

AFANTSC Panel-Mount Fan Speed Control

- Automatically adjusts fan speed depending on remote temperature sensor input
- Temperature set point is field adjustable; preset at 35 C (95 F)
- Idle speed and temperature slope are field-adjustable
- Push-to-reset thermal circuit breaker inside control housing
- Compact polycarbonate control housing can be mounted in any position
- NEMA 5-15R outlet provides power to fan
- Six-foot (1.83-m) power cord plugs into standard 120 V, 50 or 60 Hz outlet
- Remote temperature sensor with 10-ft. (3.05-m) lead mounts in airflow
- Mounting brackets included

A19FANSC 19-in. Rack-Mount Fan Speed Control

- Continuously variable fan speed control knob with minimum speed adjustment
- Uses 1 RU rack space
- Steel construction
- Two NEMA 5-15R outlets provide power to fan
- Six-foot (1.83-m) power cord plugs into standard 120 V 60 Hz outlet

Finish

- AFANTSC: Light-gray polycarbonate control housing

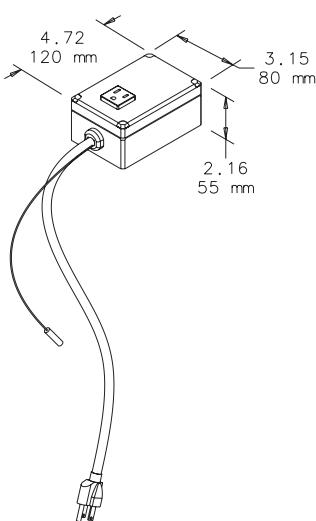

- A19FANSC: RAL 9005 black polyester powder paint

Bulletin: DTHRM

Panel Mount Fan Speed Control

19 inch Rack Mount Fan Speed Control

Fan Accessories**19-in. Rack-Mount Fan Tray**

ATO

**Application**

Fan trays enhance the natural convection airflow within a cabinet when installed with other 19-in. rack-mount equipment.

Features

- Fan trays available with either three or six 4-in. fans
- Includes 72-in. (1829-mm) power cord with IEC 320 standard power socket
- Power cord plugs into standard 115 VAC outlet
- Lighted rocker switch provides on-off control and indicates when fans are on

Finish

RAL 9005 black, lightly textured polyester powder paint

Louver Plate Kits

Designed to provide ventilation in enclosures where excessive internal heat or excessive moisture is a problem. Although louvers cannot keep all moisture out of an enclosure, gasketing or sealing the perimeter of the louver plate reduces problems associated with moisture intrusion. These kits may be easily installed in the field by making a cutout of the proper size and attaching the louver plate in place. Louver plates are made from 14 gauge steel with an ANSI 61 gray polyester powder finish over pretreated surfaces or 316 stainless steel. Hardware is furnished for mounting. Custom sizes, materials, finishes, etc., can be provided on special order.

SS6 in catalog number indicates louver plate is Type 316L stainless steel.

Filters for Louver Plate Kits

Design

Designed for use with Louver Plate Kit. Mounting holes on filter bracket align with louver mounting holes. Hardware supplied with louvers also secures filter brackets in place. Aluminum air filters provide good arrestment of airborne dust and dirt.

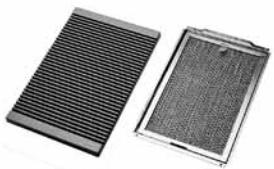

Filter Media

Filter media is composed of layers of slit and expanded aluminum providing hundreds of adhesive coated baffle surfaces for trapping impurities. Impurities are held throughout the depth of the filter. Washing with warm water will keep the filter clean. To achieve best results, Hoffman Filter Adhesive is recommended.

87541390

Small Ventilator

Filter Adhesive

Designed to maximize the efficiency of all expanded aluminum air filters. Use of Filter Adhesive doubles the dust-retention capacity of the filter. Adhesive contains a low-viscosity water-soluble oil which absorbs dirt particles trapped on the surface of the filter. Through the circulation of the oil, a renewed impurity-absorbing surface is constantly established. Washing with water will remove dust, dirt and other impurities. Once the filter is dry, re-coat with adhesive.

AFLTAD	Spray Adhesive

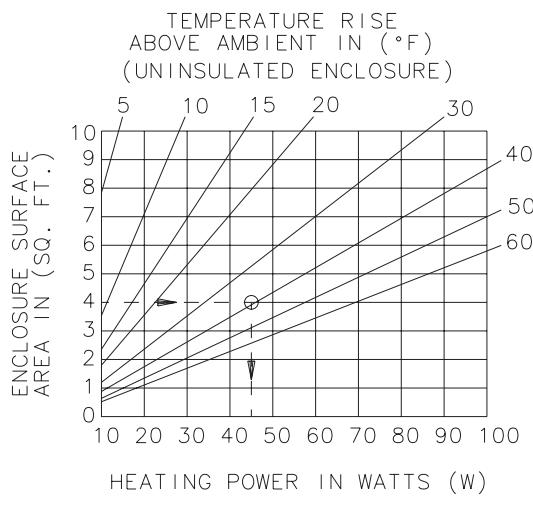

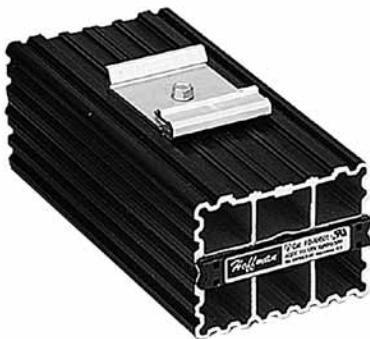

Heaters Sizing and Selection

Heaters Sizing and Selection Overview

When temperatures dip below the minimally acceptable ranges for electronics, our electric heaters can raise the temperature inside enclosures to appropriate levels. Heaters are designed to protect sensitive mechanical, electrical and electronic equipment from the harmful effects of condensation and corrosion. Two styles offer heating powers from 10 W to 800 W.

The graph in "Semiconductor Control Panel Heaters (for 10-60 W Heating Applications)" represents a painted-steel enclosure mounted in a calm-air building interior. The lowest temperature differential between room temperature and enclosure interior must be 10 F+ to prevent humidity and condensation. For outdoor applications, double the heating power requirement.

Semiconductor Control Panel Heaters (for 10-60 W Heating Applications)

Step 1:

Plot your application using the graph.

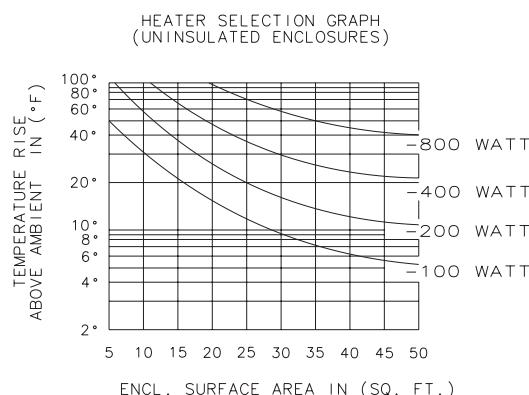

- Find surface area (for example, 4 ft.²) on the vertical scale
- Draw a horizontal line across to the intersection point with the diagonal line representing $\Delta T = 40$ F
- Extend a vertical line down to the horizontal scale to determine your total heating power required (W = 45 W)

Step 2:

From the total Watts required, subtract the 20 W from pre-existing components to arrive at the minimum heater power of 25 W. The 30 W DAH301 heater should be selected in this case since it is the nearest size that exceeds the requirement.

Heaters Sizing and Selection

Electric Heaters (for 100-800 W Heating Applications)

Example:

Which electric heater would most-efficiently maintain a 60 F temperature in an uninsulated 24 x 24 x 10 enclosure that is exposed to a temperature not less than 30 F?

Step 1:

Calculate the total enclosure surface area.

$$\text{Area (ft.}^2\text{)} = 2[(\text{AxB}) + (\text{AxC}) + (\text{BxC})] \div 144 \text{ where "A", "B" and "C" are the dimensions of the enclosure.}$$

In our example,

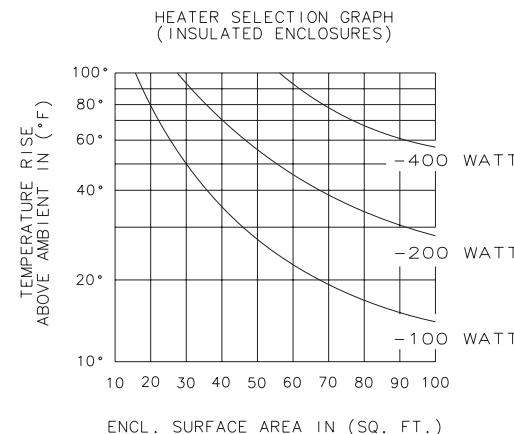

$$\text{Area} = 2[(24 \times 24) + (24 \times 10) + (24 \times 10)] \div 144 = 14.7 \text{ ft.}^2$$

Step 2:

Using the graphs, draw a vertical line through the enclosure surface area and determine the temperature rise given by each heater. For enclosures exposed to windy conditions, heaters should be oversized by approximately 50 percent.

Step 3:

Select the electric heater that achieves the desired temperature rise. In our example, the desired temperature rise is 30 F (60 F - 30 F). The 200 W heater should be selected since its temperature rise (35 F) exceeds the requirement.

Heaters

Electric Heater

CAUTION

These electric heaters are not designed for use in dusty, dirty, corrosive, or hazardous locations. Portions of the heater can get hot. Adequate protection must be taken to protect people from potential burns, and to protect other components from this heat. Hoffman recommends this heater only be installed in a totally-enclosed metal enclosure.

DO NOT INSTALL HEATERS ON WOOD PANELS.

Heat sensitive components should not be placed near the heater discharge area since this air can be quite warm. The clearance range defines the space that must be kept free of these components for proper and safe operation of the heater.

Industry Standards

UL 508A Component Recognized; File No. E61997

CSA Certified, CSA File No. LR42186
CE

Application

Protect mechanical, electrical and electronic equipment from low temperatures, condensation and corrosion with this thermostatically controlled, fan-driven heater that maintains a stable enclosure temperature.

Fan draws cool air from the bottom of the enclosure and passes this air across the thermostat and heating elements before being released into enclosure cavity. Heated air is discharged through the top of the heater unit.

Electronic Hygrotherm

Industry Standards

CE

cURus; File No. E164102

Application

The Electronic Hygrotherm senses ambient temperature and relative air humidity and adjusts a connected device to maintain temperature and humidity set points.

Features

- Temperature (32-140 F) and humidity (50%-90% RH) adjustment
- High switching capacity
- Optical function displays (LED) in each control
- Long service life (100,000 cycles NO) (50,000 cycles, NC)
- Mounting clip for 35-mm DIN rail
- Change-over contact (relay)
- Connection: 5-pole terminal for AWG 14 max (2.5-mm square)
- Plastic housing UL94V-0
- Vertical mounting
- Maximum switching capacity:
 - 120 VAC 8A (Resistive Load)
 - 240 VAC 8A (Resistive Load)
 - 120 VAC 3A (Inductive Load)
 - 240 VAC 3A (Inductive Load)

Mechanical Hygrostat

Application

The Mechanical Hygrostat controls relative air humidity inside an enclosure to prevent condensation and corrosion that can damage components. It can also be connected to an enclosure heater, cooling fans, warning lights or other devices.

The critical relative humidity (RH) level for most components is 65 percent. Above 65 percent RH, condensation can form and cause electronic equipment to malfunction.

Features

- Adjustable relative humidity range
- High switching capacity
- Long service life (>100,000 cycles)
- Maximum permissible air velocity of 50 ft./sec. (15 m/s)
- Maximum switching voltage = 250 VAC
250 V should be switched only in a non-condensing environment
- Change-over contact
- Mounting clip for 35-mm DIN rail
- Connection: 3-pole terminal for AWG 14 max. (2.5-mm squared)
- Contact resistance less than 10 mΩ

Finish

Light-gray plastic, UL94V-0

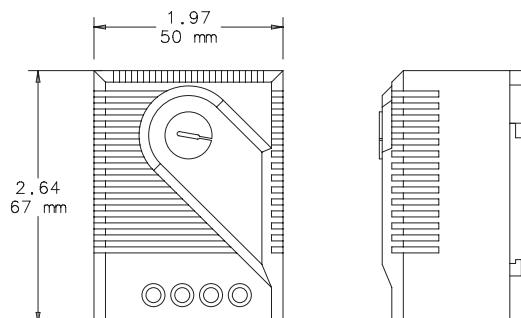

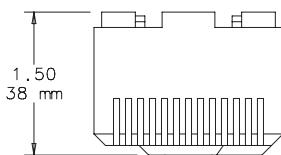

Bulletin: D85

Controllers**Dual Thermostat****Industry Standards**

CE
CSA File No. 215952
cURus; File No. E164102

Application

Two thermostats in one, the Dual Thermostat independently controls equipment heating and cooling systems.

Features

- Two thermostats; one normally closed (NC), red, and one normally open (NO), blue, in one casing
- Wide adjustable temperature range (32-140 F)
- Thermostatic bimetallic sensor element
- Connection: 4-pole terminal for AWG 14 max (2.5 mm²)
- Mounting clip for 35-mm DIN rail

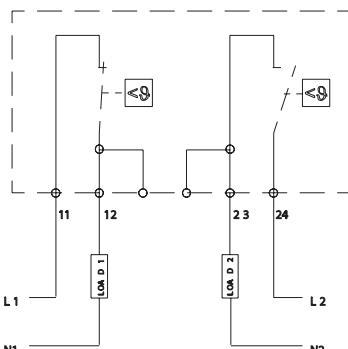

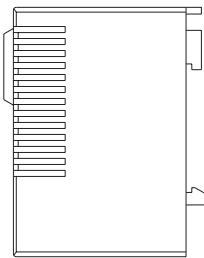

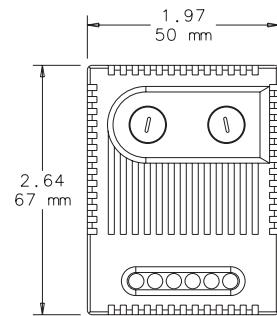

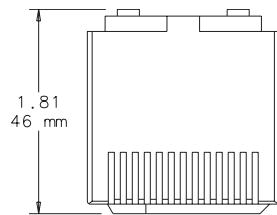

Finish

Light-gray plastic, UL94V-0

Bulletin: D85

Industry Standards

cURus; File No. E164102
UL94-VO

Protection rating IEC IP30
CSA Certified, File Number 215952
CE

Application

These easy-to-install thermostats regulate and monitor air temperature in enclosures that contain heat-emitting equipment. Thermostats prolong heater and fan life expectancy by controlling operation time and increase electrical component working efficiency by exposing them to fewer environmental contaminants.

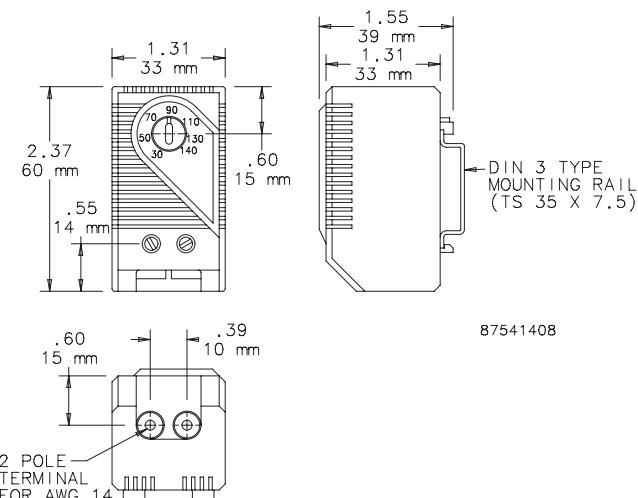

Features

- Additional label for conversion to Celsius scale and blank label to cover set point range label when adjustment after initial setting is not desired are included
- Bimetal temperature sensor
- Plastic housing
- Connections consist of tubular screw terminals for AWG 14 (.04 sq. in.)
- Provision for both panel mounting and DIN rail mounting

Finish

Molded plastic housing is black

Condensation Devices

H2OMIT® Vent Drains, Type 4X

H2OMIT®

Industry Standards

Maintains UL/cUL Type 4, 4X rating when properly installed on a UL/cUL Type 4 or 4X enclosure.

UL 508A Listed; Type 4, 4X; File No. E61997
cUL Listed per CSA C22.2 No 94; Type 4, 4X; File No. E61997

NEMA/EEMAC Type 4, 4X

Application

H2OMIT® Vent Drains allow accumulated water to drain out the bottom of an enclosure. The UL-approved vent drains also function as an air pressure equalizer, reducing the harmful effects of temperature-induced vacuums that could pull water and moisture into the enclosure.

Features

- Uses gravity to remove collected liquids
- One-way mechanical shut-off when pressure is equalized prevents water and contaminants from entering the enclosure
- Helps reduce corrosion that can limit the life of internal electrical and electronic components
- Installs in a 7/8-in. hole in the bottom of enclosure with provided nut or in a 1/2-in. NPT/NPS threaded conduit hub
- Installs in the bottom of mild steel, aluminum, stainless steel or non-metallic enclosures
- Maintains enclosure's UL Type rating when properly installed

Specifications**Stainless Steel Vent Drain**

- Corrosion-resistant polyester material with a Type 304 stainless steel sleeve
- 2.00-in. long x 1.38-in outside diameter

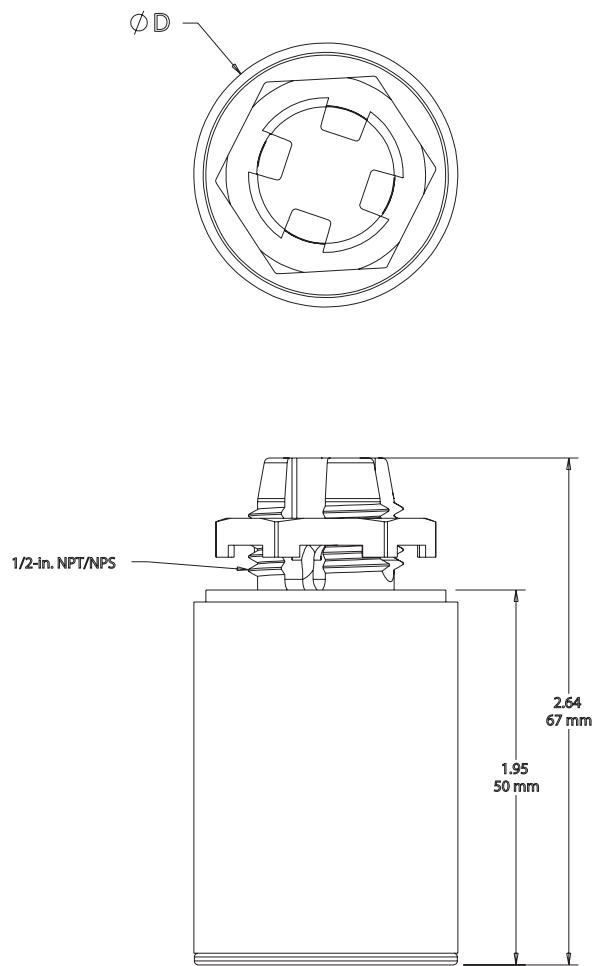

Non-Metallic Drain Vent

- Corrosion-resistant polyester material
- 2.00-in. long x 1.25-in. outside diameter

Bulletin: H2O

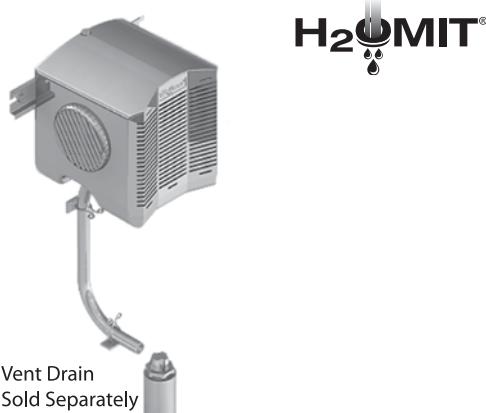

Standard Product

Condensation Devices

H2OMIT® Thermoelectric Dehumidifier
H2OMIT®
Industry Standards

UL 508A Listed; File No. E61997
cUL Listed per C22.2 No. 14; File No. E61997

CE

Application

The H2OMIT® Thermoelectric Dehumidifier removes moisture from the air within an enclosure, providing an inexpensive yet highly effective way to protect electronic and electrical components from condensation.

Features

- Reduces corrosion that can limit the life of internal electrical and electronic components
- Condenses moisture from internal enclosure air and standing liquids
- Built-in drain provision with plastic hose directs collected moisture to the Vent Drain (sold separately)
- Rotating side air vents direct recirculating air away from critical controls
- Mounts via DIN rail on internal panel or mounts directly onto the inside bottom of enclosure above the Vent Drain (sold separately)
- Can be used in mild steel, aluminum, stainless steel and non-metallic enclosures

Standard Product

Catalog Number	Description
H2OMITTER	Thermoelectric Dehumidifier

Specifications

- High-impact ABS shell
- Operates on 24-Volt DC power
- 4.5 A max. (84 W)
- Runs continuously above 32 F^a (power supply not included)
- Removes 8 oz. of moisture in 24 hours
- Compact 6.00-in. x 5.50-in. x 5.75-in. design
- One Thermoelectric Dehumidifier includes:
 - Four feet of plastic hose
 - Two hose retainers
 - One double-ended hose retainer
 - Six inches of Velcro[®]
 - Seven-inch strip of DIN rail
 - Two mounting screws

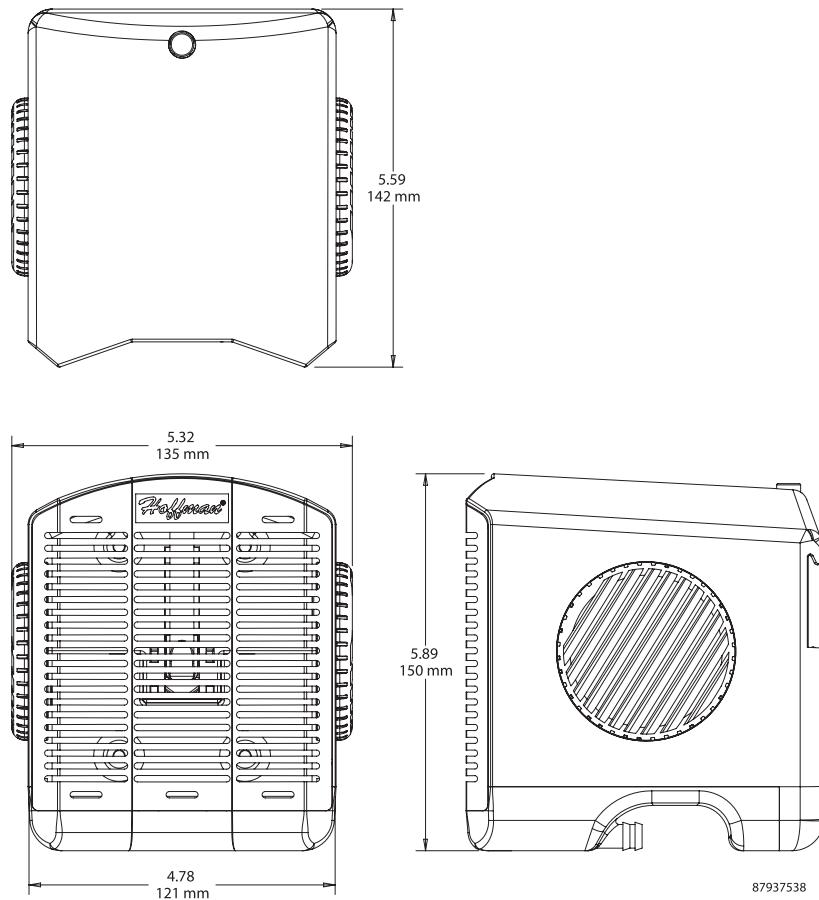

Must be used with UL-certified drain to remove pooled liquid from enclosure.

^aIf continual operation is not desired, a Mechanical Hygrostat (AMHUM) can be wired to the thermoelectric dehumidifier and then set to turn the dehumidifier on at the desired relative humidity.

VELCRO is a trademark of Velcro Industries B.V.

Definition: Dew Point is the temperature at which condensation forms. If the temperature of the enclosure is 85 F and the relative humidity is 80 percent, Dew Point is reached at a temperature of 78 F or below.

This means that moisture vapor will condense on any surface that is below the Dew Point temperature of 78 F.
