

-  Terminal Blocks
-  Klemmleisten
-  Borniers
-  Morsetti per circuito stampato

IMO has been manufacturing innovative control components since 1970. The continuous expansion of the company's manufacturing resources and the development of strategic alliances with manufacturing centres of excellence have produced one of the finest ranges of automation and controls products available today. The first company in Europe to do so, IMO gives a no-quibble Three Year Warranty on the majority of its electronics based control components and a Five Year Warranty on the full range of Jaguar Drives.

IMO stellt seit 1970 innovative Steuerungsbestandteile her. Die ununterbrochene Erweiterung der Herstellung und Ressourcen des Unternehmens und die Entwicklung von strategischen Allianzen mit vortrefflichen Herstellungszentren haben zu einer der besten Reihen von Automatisierungs- und Steuerungsprodukten, die heutzutage erhältlich sind, geführt. IMO ist das erste Unternehmen in Europa, das eine bedingungslose Drei-Jahres-Garantie auf die Mehrzahl seiner elektronisch-basierten Steuerungsbestandteile, und eine Fünf-Jahres-Garantie auf die komplette Reihe der Jaguar Antriebe anbietet.

Depuis 1970, IMO a développé des solutions innovantes pour le contrôle de process et de production. L'accroissement continu de ses ressources de fabrication, allié à un développement d'alliances stratégiques avec des centres de fabrication de haute qualité a permis à la société IMO de disposer de produits d'automatisme et de contrôle parmi les meilleurs actuellement. Première société en Europe à le proposer, IMO offre une garantie sans discuter de Trois ans sur la majorité de ses produits d'automatisme et de contrôle équipés d'électronique et de Cinq ans sur l'ensemble de sa gamme de variateurs de vitesse Jaguar.

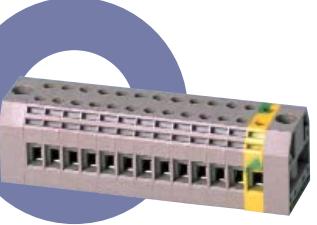

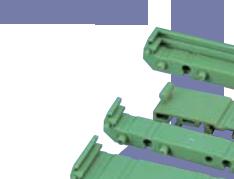

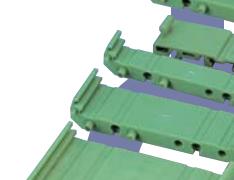

IMO produce dispositivi di controllo innovativi sin dal 1970. La continua espansione produttiva della società e delle sue risorse e lo sviluppo d'alleanze strategiche con centri di produzione d'eccellenza, hanno creato una delle migliori gamme di prodotti per l'automazione e controllo oggi disponibile. La prima azienda in Europa a farlo, IMO offre una garanzia di tre anni senza condizioni sulla maggior parte dei suoi componenti di controllo elettronico ed una garanzia di cinque anni su tutta la gamma d'inverter IMO Jaguar.

# Electronic components range

IMO Precision Controls is at the leading edge of electro-mechanical PCB components technology, with ranges of highly specified product through which we constantly strive to meet the ever changing technical demands of our customer base across many market areas.

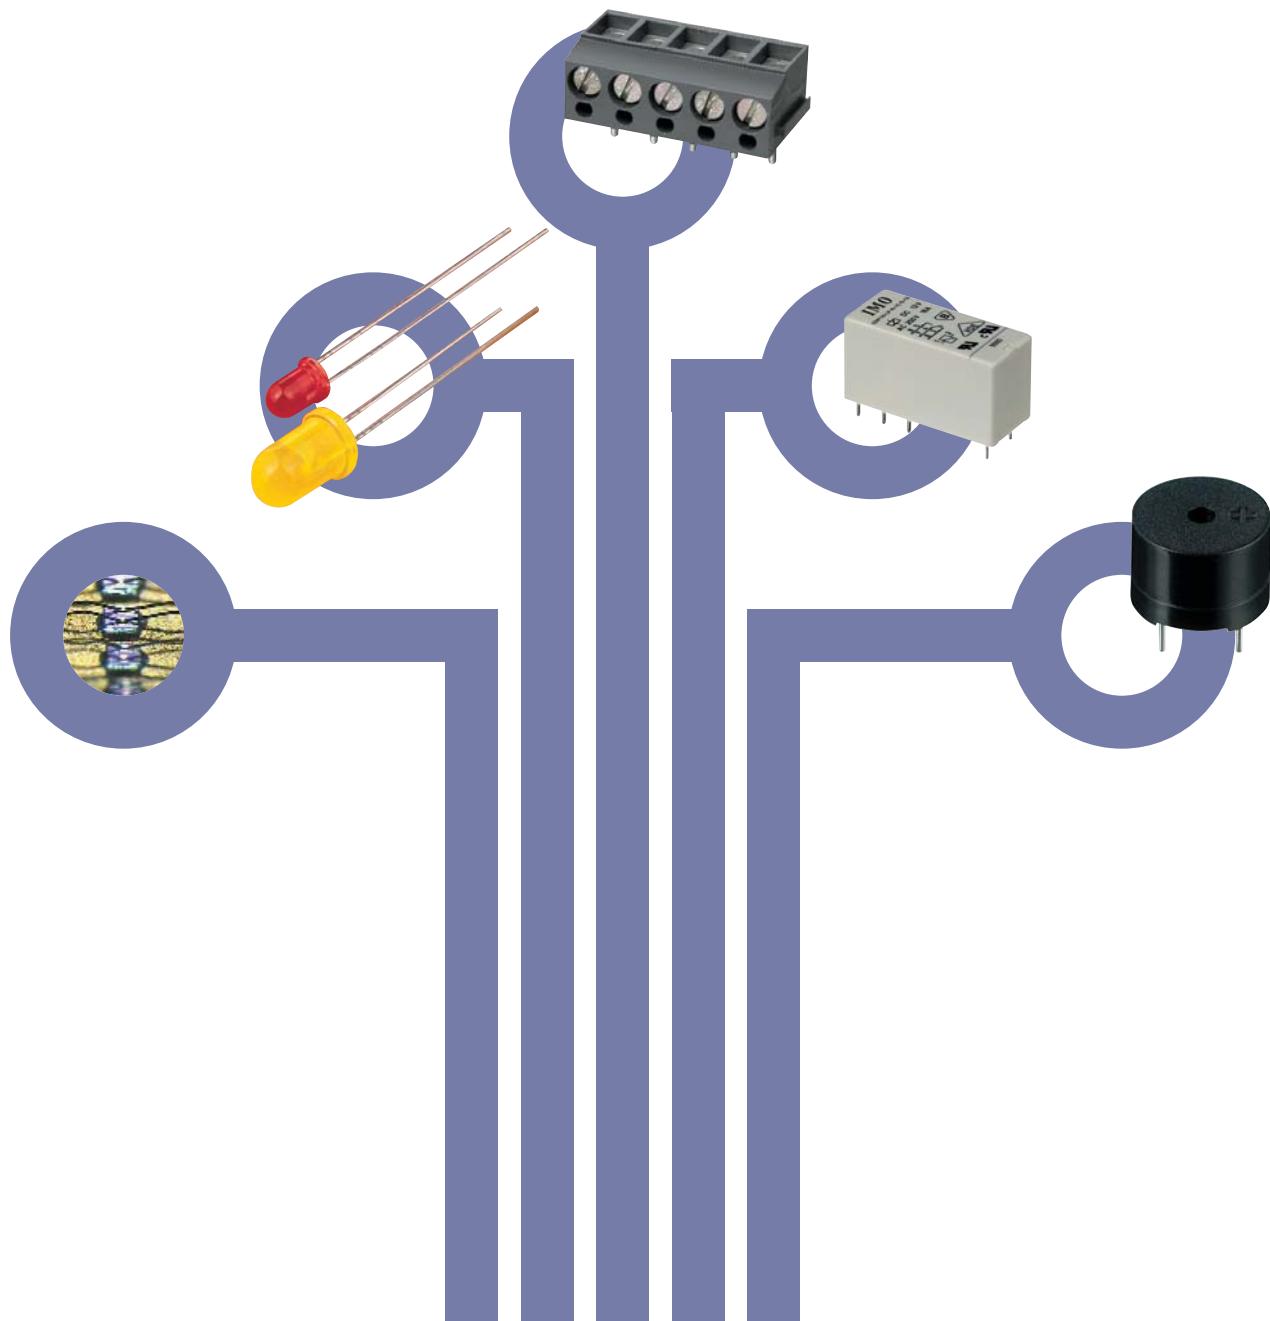

IMO Precision Controls stellt hochmoderne elektromechanische Platinenkomponenten her, deren hochwertige Spezifikation den ständig wechselnden Anforderungen unserer Kunden in vielen Marktbereichen entspricht.

IMO Precision Controls est à la pointe de la technologie des composants électromécaniques pour circuits imprimés avec des gammes de produits très spécifiques à travers lesquelles nous nous efforçons constamment de répondre aux exigences techniques toujours différentes de notre clientèle dans de nombreux secteurs du marché.

IMO Precision Controls è all'avanguardia nella tecnologia dei componenti elettromeccanici per circuiti stampati e offre una gamma di prodotti dalle caratteristiche eccezionali per soddisfare le esigenze sempre variabili dei nostri clienti in tutti i settori industriali.

# IMO: connecting to the future

IMO are proud to introduce one of the most comprehensive terminal block ranges available in the market. The IMO Terminal Blocks consist of an insulated material populated with various connection mechanisms that include conventional terminal screw, rising clamp, plug and socket, and screwless types on various pitches and with various electrical capabilities. With our multi-million pound stock holding, at our warehouse facilities, the IMO Terminal Block range gives our customers confidence in our ability to supply a solution to their interconnection problems.

A number of design features have been implemented within the IMO devices to overcome problems typically encountered by our customers when using products of this type, and our continuous investment in tooling for the products, not only allows for production of standard devices, but customer specific designs can also be undertaken and bespoke configurations, including product printing and assembly.

We are confident these new products will offer our customers the technical advantages they need to compete in their own markets. This coupled with highly competitive pricing, high quality and one of the most comprehensive electro-mechanical component packages available, supported by sophisticated IT systems and infrastructure will enable IMO to meet your vendor and administration reduction requirements now and in the future.

IMO stellt eine der umfassendsten Produktreihen an Klemmleisten her. Die IMO Reihenklemmen bestehen aus Isolierwerkstoffen mit verschiedenen Anschlussmechanismen, darunter herkömmliche Schraubanschlüsse, "Rising Clamp" Stecker/Buchse, und schraubenlose Ausführungen mit verschiedenen Rasterabständen und elektrischen Eigenschaften. Aufgrund unserer Lagerbestände im Wert von vielen Millionen Euro können unsere Kunden sicher sein, dass IMO eine Lösung für alle Anschlussprobleme liefern kann.

Die IMO Komponenten besitzen verschiedene Konstruktionsmerkmale, die typische Anwendungsprobleme bei Produkten dieser Art ausmerzen. Unsere kontinuierliche Investition in die Herstellung ermöglicht nicht nur die Produktion von Standardkomponenten, sondern auch kundenspezifische Ausführungen, inklusive Aufdruck und Montage.

Wir sind sicher, dass diese neuen Produkte unseren Kunden den nötigen technischen Vorsprung verschaffen, um sich auf dem jeweiligen Markt behaupten zu können. Durch das äußerst wettbewerbsfähige Preisgefüge, die hohe Qualität und das umfassende Sortiment kann IMO, unterstützt durch hochentwickelte IT-Systeme und eine entsprechende Infrastruktur, Ihre Anforderungen auch in Bezug auf Verkauf und geringeren Verwaltungsaufwand jetzt und in der Zukunft erfüllen.

La société IMO est fière de pouvoir proposer les gammes les plus complètes de borniers disponibles sur le marché. Les borniers IMO se composent d'un matériau isolé dans lequel sont installés divers systèmes de connexion parmi lesquels le bornier à vis traditionnel, des borniers à levier de blocage, de type support/fiches et sans vis avec plusieurs pas et diverses capacités électriques. Avec un stock d'une valeur de plusieurs millions de livres sterling dans nos entrepôts, notre gamme de borniers nous permet de justifier la confiance que nous accordent nos clients quant à notre capacité à fournir une solution à leurs problèmes de connexions.

Un certain nombre de caractéristiques conceptuelles ont été mises en œuvre dans les appareils IMO pour résoudre les problèmes typiques rencontrés par nos clients quand ils utilisent des produits de ce type, et notre investissement continu dans l'outillage pour la fabrication des produits nous permet non seulement de produire des appareils standard mais aussi de réaliser des conceptions spécifiques pour nos clients ainsi que des configurations sur mesure, y compris l'étiquetage et le montage du produit.

Nous sommes sûrs que ces nouveaux produits assureront à nos clients les avantages techniques dont ils ont besoin pour rester concurrentiels sur leur marché. Ceci associé à des prix très compétitifs, des produits de haute qualité et l'une des offres de composants électromécaniques les plus complètes actuellement disponibles, soutenu par des systèmes informatiques et une infrastructure sophistiquée, permet à IMO de satisfaire les demandes de réduction de vos coûts de distribution et d'administration dès maintenant et pour longtemps.

IMO presenta con orgoglio una delle più complete gamme di morsetti e morsettiera disponibile sul mercato oggigiorno. Le morsettiera IMO consistono di un corpo in materiale isolante sul quale sono presenti vari tipi di meccanismi di connessione (ad esempio viti, molle a sollevamento, presa e spina, senza viti) con vari passi e varie capacità elettriche. Con un inventario del valore di molti milioni di sterline a disposizione in magazzino, IMO offre con la sua gamma di morsettiera la sicurezza di poter risolvere tutte le esigenze di interconnessione dei propri clienti.

I prodotti IMO incorporano molte soluzioni progettuali specificatamente sviluppate per risolvere i problemi tipicamente incontrati dai clienti nell'utilizzo di questa categoria di prodotti. I nostri continui investimenti in termini di attrezzature e macchinari non solo ci consentono di fabbricare una vasta gamma di prodotti standard, ma ci permettono anche di realizzare progetti specifici e personalizzati secondo il disegno del cliente, compresa la stampa sul prodotto e l'assemblaggio.

Abbiamo la certezza che questi nuovi prodotti possano offrire ai nostri clienti i vantaggi tecnici di cui hanno bisogno per poter competere con successo nei propri mercati. Prezzi estremamente competitivi, un'elevatissima qualità, uno dei più completi pacchetti di componenti elettromeccanici disponibili sul mercato, uniti a sistemi informatici e infrastrutture di supporto sofisticati, consentono a IMO di soddisfare tutte le vostre esigenze attuali e future di riduzione di costi di fornitori e amministrazione.

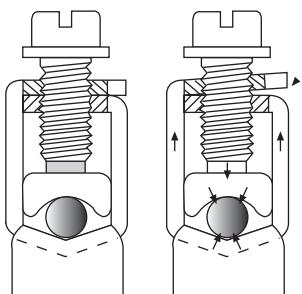

# Key design features

## Formed Rising Clamp

This mechanism, made of plated steel with high strength steel screw, allows for the conductor to be clamped securely using a high contact force. The product incorporates an integrated protection against self-loosening whereby, as the screw is tightened the upper overlap springs up and locks on to the upper screw thread. Movement, or variation in the conductor, either due to environmental vibrations or changes in temperature, are accommodated by the high contact force, or the elasticity in the formed clamp mechanism.

## Contact Faces and Surfaces

Rising clamp style terminal blocks incorporate face milling to facilitate multiple point contact along the wire surface therefore, reducing contact resistance and, in conjunction with the high contact force, large corrosion free areas of conductor contact are found when the product is subject to hostile atmospheres. Improved retention force of the conductor is also an advantage of this clamp style.

## Steel Inserts

Where the market requires high contact forces, particularly in the IMO plug and socket style ranges, which may be connected and disconnected a number of times during their working life; plated steel wire cages and screws are used as these give high rigidity, and are less prone to deformation whilst in-field service, when compared with similar style inserts made in copper or brass. IMO incorporate Zinc plating of the steel elements as experience of Terminal Block usage in outside climate conditions, has verified the use of this element as offering quality surface protection.

## Screw Types

IMO terminal blocks can include the +/- screws as standard to allow for in-field service.

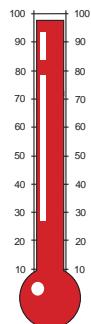

## Finger Protection from Screws

Safe usage is always of paramount importance and it is recommended that connectors, terminals and wiring must not be connected or disconnected in live circuits however, this can never be guaranteed therefore, in order to reduce possible occurrence of shock, IMO Terminal Blocks are designed to reduce, or eliminate, direct contact with the operational elements of the product. Screws, when undone, are either captive and cannot be removed from the terminal; or remain well below the surface of the terminal block housing thus preventing direct contact.

## Identification

IMO Terminal Blocks can facilitate identification using a number of options that include:

- 1 Coding Pin Arrangements
- 1 Direct Printing on Block
- 1 Labels for Application to Block
- 1 Various Material Colours

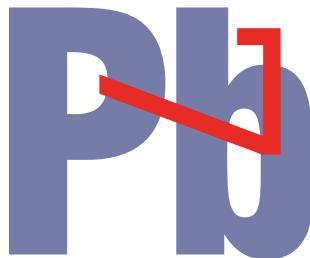

## High Temperature Plastics

As manufacturing trends in Printed Circuit Boards (PCBs) have increasingly included Surface Mount Technology (SMT), connector manufacturers have faced increasing challenges due to the size and functionality of their products. Although the majority of IMO Terminal Blocks are mounted as a secondary process using either wave soldering or hand solder, IMO have a product that is suitable for Through Hole PCBs using reflow production techniques and the elevated temperatures that environment involves.

EU Directives which lead to the phase in of lead-free solder will impact on the materials used, since the new solder pastes are expected to enter their liquid phase 30 °C higher than current lead based solders, and the IMO Terminal Blocks using this high temperature plastic material should be appropriate for these types of processes.

## Lead-Free

The IMO Terminal Block range (M) is lead free in line with impending EU Directives.

## Continuous Development

IMO Precision Controls employs a policy of continuous review of manufacturing and development of our product range, and therefore IMO reserve the right to make alterations to our products in line with technical advances and industry standards. Whilst every endeavour is made to ensure that customers are kept up to date with the improvements that IMO introduce, if you have any questions reference should be made to your local office for clarification.

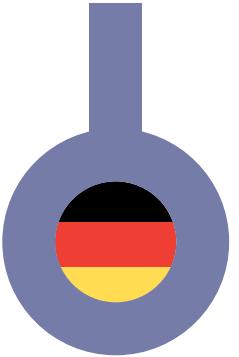

## Approvals

The IMO range of Terminal Blocks, depending upon series, are able to comply with all the major requirements of the relevant international standards.

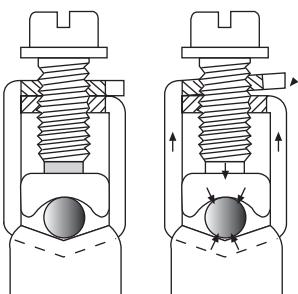

a

# Die wichtigsten Designeigenschaften

## Geformte Steigende Klammer

Dieser Mechanismus, hergestellt aus galvanisiertem Stahl mit hochstarken Stahlschrauben, macht es möglich, dass der Leiter durch den Gebrauch von einer hohen Kontaktkraft sicher eingeklemmt werden kann. Dieses Produkt schliesst einen integrierten Schutz gegen Selbstlösung ein wobei die obere Hälfte aufspringt und sich auf den oberen Schraubendraht aufschliesst, während die Schraube befestigt wird. Bewegungen oder Veränderungen in dem Leiter, entweder durch Umgebungsvibrationen oder Veränderungen in der Temperatur, werden durch die hohe Kontaktkraft oder durch die Elastizität in dem geformten Klammermechanismus aufgenommen.

## Kontaktstirn und -oberflächen

Klemmleisten mit steigenden Klammermechanismen enthalten Stirnfräsen um multiple Kontaktpunkte entlang der Drahtoberfläche dazubieten. Dies bedeutet, dass reduzierter Kontaktwiderstand und, wegen einer hohen Kontaktkraft, grosse korrosionsfreie Oberflächen an den Leiterkontakten vorgefunden werden, wenn das Produkt an unfreundlichen Atmosphären ausgesetzt werden.

## Stahleinlagen

Wo im Markt hohe Kontaktkräfte erfordert werden, besonders in der IMO Stecker- und Sockelstil Produktreihe, die während ihrer Lebensdauer mehrere Male verbunden und getrennt werden könnte, werden verstärkte Drahtkäfige und Schrauben benutzt, weil diese eine hohe Unnachgiebigkeit bieten und weniger dazu neigen, sich zu verformen wenn sie eingesetzt werden, verglichen zu Einlagen mit ähnlichem Stil, die aber aus Kupfer oder Messing hergestellt sind.

## Schraubtypen

IMO Klemmleisten können +/- Schrauben als Standard einschliessen um den Einsatz im Gebrauchsfall zu ermöglichen.

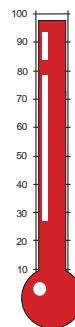

## Fingerschutz von den Schrauben

Der sichere Gebrauch ist von höchster Wichtigkeit und es wird immer empfohlen, dass Verbinder, Klemmleisten und Drähte nicht in spannungsgeladenen Stromkreisen verbunden oder getrennt werden. Das dies nicht geschieht, kann jedoch niemals garantiert werden und deshalb sind IMO Klemmleisten so entworfen, dass sie den direkten Kontakt mit dem operativen Elementen in dem Produkt reduzieren oder ganz ausschliessen um die Möglichkeit, dass sich ein Schock ereignet, zu reduzieren. Schrauben, wenn sie gelockert werden, sind entweder unverlierbar oder können nicht von der Klemmleiste entfernt werden, oder sie bleiben weit unter der Oberfläche von dem Klemmleistengehäuse und verhindern deshalb einen direkten Kontakt.

## Identifizierung

IMO Klemmleisten bieten die folgenden Möglichkeiten zur Identifizierung:

- 1 Anordnung von Kodierstiften
- 1 Direktes Aufdrucken auf die Klemme
- 1 Markieretikette zur Anwendung auf den Klemmen
- 1 Eine Anzahl verschiedener Materialfarben

## Bleifrei

Die IMO Produktreihe von Klemmleisten (M) ist bleifrei entsprechend der bevorstehenden EU Direktiven.

## Ständige Entwicklung

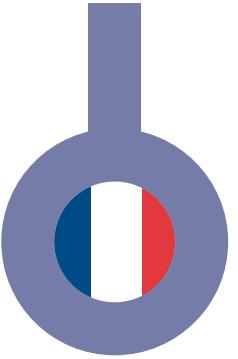

IMO Precision Controls Ltd setzt eine Politik der ständigen Überprüfung der Herstellung und Entwicklung von unserer Produktreihe ein, und deshalb behält IMO sich das Recht vor um Änderungen an unseren Produkten vorzunehmen, die den technischen Fortschritte und Industriestandard entsprechen. Während alle Schritte unternommen werden um zu versichern, dass Kunden auf dem Laufenden gehalten werden was die Verbesserungen, die IMO vorstellt, angeht, können alle Fragen, die sich trotzdem ergeben, an unser Büro in London gerichtet werden.

## Zulassungen

Die IMO Klemmleistenproduktreihe entspricht, abhängig von der Serie, allen wichtigen Anforderungen der relevanten internationalen Standarde.

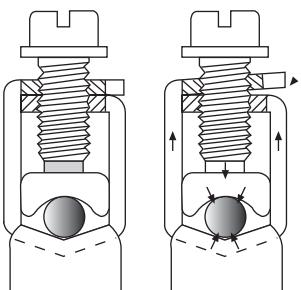

# Caractéristiques principales de la conception

## Le système à cosse montante formée

Ce mécanisme est réalisé en acier de haute résistance, il en va de même pour la vis de serrage. Ceci permet un blocage sûr des conducteurs, garantissant l'application d'une force importante sur le contact. Le produit incorpore une protection intrinsèque contre l'éloignement de la vis, lorsque la vis est serrée la pression résultante tire à part les deux moitiés de la pièce de verrouillage, assurant une immobilisation très efficace de la vis. Les mouvements ou variations du conducteur, dus soit aux vibrations environnementales ou aux changements de températures, sont contenus par la force de contact élevée et l'élasticité de ce même mécanisme de serrage.

## Les surfaces de contact

L'efficacité et la force de serrage élevée du système de serrage mentionné ci-dessus, équipé d'une barre de courant qui garantit une ample surface de contact avec l'ensemble du conducteur, permet de réduire au minimum la résistance électrique de la connexion. Ceci assure de pouvoir utiliser les produits même dans les atmosphères hostiles car cela laisse une large zone de contact avec le conducteur non attaquée par la corrosion.

## Les inserts en acier

Là où le marché requiert des forces de contact élevées, particulièrement dans la gamme IMO de style de connexion de prises mâles sur prises femelles, qui peut être connecter et déconnecter un grand nombre de fois au cours de leur durée de vie, des cages à fils et des vis en acier sont utilisées du fait qu'elles sont d'une haute rigidité et moins susceptibles de souffrir des déformations durant leur service, surtout lorsqu'on les comparent avec des styles d'inserts similaires mais en cuivre ou en laiton. IMO incorpore un plaquage en zinc des éléments en acier, car l'expérience de l'utilisation des bornes de connections en extérieur à montrer que cet élément apporte une qualité supplémentaire à la protection de la surface.

## Les types de vis

Les bornes IMO incluent comme standard aussi bien les vis normales que les vis cruciformes pour répondre à l'ensemble des exigences du service sur le terrain.

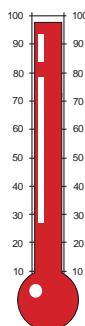

## La protection contre les contacts accidentels avec les vis

Une utilisation sûre et sans danger est toujours d'une importance primordiale et il est recommandé que les bornes et les câbles ne soient pas connectés et déconnectés lorsque le circuit est traversé par un courrant, cependant, ceci ne pouvant jamais être garanti, pour réduire les possibilités de production de chocs, les bornes de jonctions IMO ont été développées pour réduire ou éliminer le contact direct avec les éléments opérationnels du produit. Les vis, lorsqu'elles ne sont pas serrées, sont soit captives et ne peuvent pas être retirées de la borne, soit elles restent en dessous de la surface de l'enveloppe isolante de la borne de jonction, prévenant ainsi tout contact direct.

## L'identification

Les bornes de jonction IMO peuvent permettre une identification facile en utilisant un certain nombre d'options qui incluent :

- 1 L'agencement des pions de codage
- 1 L'impression directe de numéros d'identification sur la borne
- 1 Des étiquettes à poser sur la borne
- 1 Des matériaux disponibles en différentes couleurs

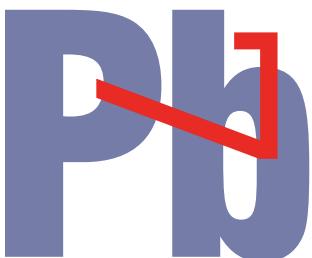

## Des plastiques résistants à des températures élevées

Comme la tendance pour la fabrication des circuits imprimés va vers l'incorporation de plus en plus de Technologie de Montage Superficielle (TMS), les entreprises fabriquant des connecteurs ont fait face à des défis croissants dus à la taille et à la fonctionnalité de leurs produits. Bien que la majorité des bornes de jonction IMO soient montées lors d'un processus secondaire utilisant la soudure à vague ou à la main, IMO propose un produit qui convient pour l'insertion dans les trous des circuits imprimés en utilisant les techniques de production par refusion et ce aux températures élevées que cet environnement implique. Par ailleurs, de prochaines Directives Européennes prévoient l'élimination du plomb de tous les procédés de soudure. Sans cet élément, le composé pour soudure ne passera à l'état liquide qu'à une température supérieure de 30 °C à celle actuelle.

Une telle situation rendra indispensable l'utilisation d'éléments avec des parties en plastique résistantes à des températures élevées, exactement comme ceux qu'IMO est déjà capable d'offrir.

## Des produits sans plomb

La gamme IMO de bornes de jonction ne contient pas de plomb conformément aux Directives Européennes imminent.

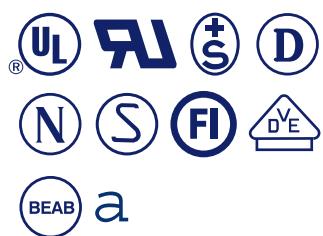

## Le développement continu

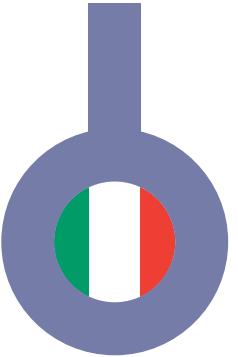

IMO Precision Controls a une politique de révision continue de la fabrication et du développement de sa gamme de produit, c'est pourquoi IMO se réserve le droit d'apporter des modifications aux produits en fonction des différentes avancées techniques et des standards industriels. Même si tous les efforts possibles sont faits pour s'assurer que les clients soient maintenu au courant de toutes les améliorations qu'IMO introduit, si vous avez quelques questions que ce soient, n'hésitez pas à en référer à votre agence locale pour clarification.

## Les homologations

La gamme IMO de borne de jonctions, selon les séries, est capable de respecter toutes les caractéristiques majeures requises par les normes internationales.

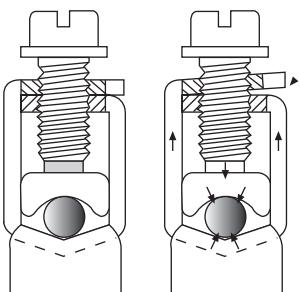

# Caratteristiche principali del progetto

## Sistema di serraggio a carrello

Questo meccanismo, è realizzato in acciaio ad alta resistenza meccanica, così come la relativa vite di fissaggio. Tale sistema consente di ottenere un sicuro bloccaggio dei conduttori, garantendo l'applicazione di un'elevata forza di contatto. Il prodotto integra altresì, un efficacissimo sistema di protezione contro l'allentamento della vite. Tale caratteristica è proprio offerta dalla forma e dal materiale con cui quest'elemento è realizzato. Possiamo pertanto affermare che ad ogni tipo di movimento o assestamento del conduttore, cambio di temperatura o vibrazioni presenti sulla scheda, il sistema risponde assicurando sempre una costante forza di contatto, ottenuta unicamente dal sistema a gabbia elastica in acciaio.

## Superficie di contatto

L'efficacia e l'alta forza di serraggio del sistema sopra menzionato, affiancata da una barra di corrente che garantisce un'ampia superficie di contatto su tutto il conduttore, consente di ridurre veramente al minimo la resistenza elettrica della connessione. Questo assicura la possibilità di poter utilizzare i prodotti anche in aree molto esposte a composti inquinanti e corrosivi. In ogni caso la superficie di contatto sarà sempre perfettamente efficiente. Possiamo aggiungere infine che la particolare forma della superficie di contatto, unita all'alta forza di serraggio determinano anche un'elevata forza di ritenzione del cavo, preservandone nel tempo l'efficacia, anche nel caso di cavi soggetti a particolari forze di trazione.

## Inserti d'acciaio

Vogliamo ancora una volta porre l'accento, sul com'è importante poter avere elementi capaci di essere connessi o disconnessi molte volte durante il proprio ciclo d'utilizzo. E' proprio per tale motivo, che il progetto si è ispirato a sistemi che comprendono materiali come l'acciaio, che offre assieme ad alte rigidità e resistenza, anche un'elevata elasticità quando richiesta. Tale criterio ha pertanto escluso l'impiego di altri materiali pure validi, ma non adatti allo scopo come ad esempio il bronzo, il rame, o l'ottone. Per migliorare la tenuta del metallo agli agenti ambientali ed a possibili graffi, la superficie della staffa è poi rivestita di speciali trattamenti a base di zinco, atti a garantirne l'aspetto ed il funzionamento nel tempo.

## Tipi di vite

I morsetti IMO, possono includere sia viti a taglio che a croce, secondo quanto richiesto dalle esigenze di servizio sul campo.

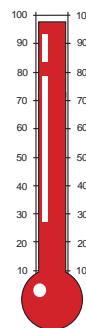

## Protezione contro i contatti accidentali con le viti

Questa caratteristica è imprescindibile su tali prodotti, pur considerando che è buona norma non connettere o disconnettere i conduttori, quando questi sono percorsi da una qualsiasi corrente. Il morsetto IMO in ogni caso assolve lo scopo di prevenire tali contatti accidentali, in quanto la vite è ben sotto il piano isolato esterno, e le parti in metallo sono adeguatamente protette.

## Elementi identificativi dei prodotti

Per facilitare l'identificazione dei vari morsetti o connettori, IMO offre le seguenti varie scelte costruttive:

- 1 Codifica per numero di contatti;
- 1 Stampa dei codici identificativi o numerazioni direttamente sui morsetti;
- 1 Etichette da applicare direttamente sui morsetti;
- 1 Materiali disponibili in varie colorazioni.

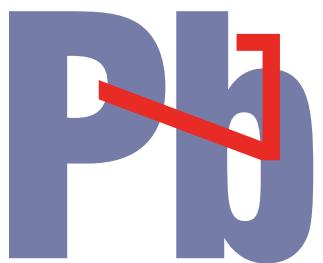

## Plastiche per alte temperature

Assistiamo ad un trend di mercato, che sta spingendo le Aziende manifatturiere impegnate nella produzione di schede elettroniche, ad accrescere sempre di più l'uso di tecniche a montaggio superficiale (SMT), ed in questo senso tutte le aziende che producono parti come i connettori, si stanno dando un gran daffare per soddisfare al meglio tal esigenza. Sebbene la maggior parte dei morsetti IMO sia montata durante i processi secondari, previo l'utilizzo di processi di saldatura ad onda o manuale, IMO ha già un prodotto capace di poter essere inserito in un processo di reflow ad alta temperatura. Tale esigenza deriva anche da una precisa direttiva della Comunità Europea, che prevede l'eliminazione del piombo da tutti i processi di saldatura. Senza quest'elemento, il composto saldante passerà allo stato liquido ad una temperatura di 30 °C superiore a quello attuale.

Tale situazione, renderà indispensabile l'utilizzo di elementi con parti plastiche resistenti alle alte temperature, proprio come quelli che IMO è già in grado di offrire.

## Prodotti senza Piombo

Tutti i morsetti IMO non contengono piombo, in linea con le direttive previste dalla UE.

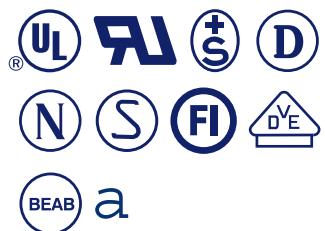

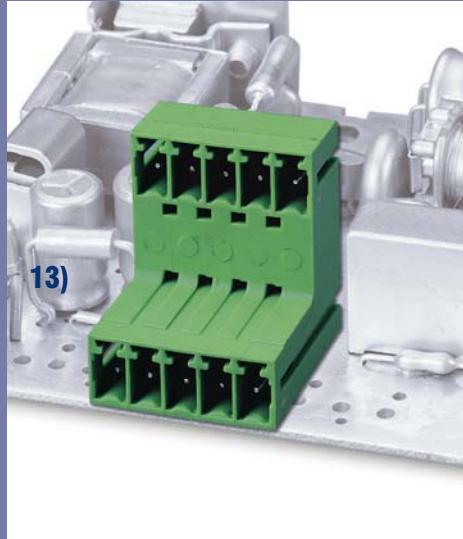

## Nuovi progetti

I tecnici della IMO Precision Controls sono costantemente impegnati nell'apportare continue modifiche ai processi di produzione, allo sviluppo di nuovi prodotti e pertanto IMO si riserva di apportare modifiche e miglioramenti alla propria gamma per essere sempre in anticipo rispetto a quelle che sono le esigenze dei moderni standard industriali.

## Approvazioni Internazionali

IMO Precision Controls è in grado di rispondere a tutti i requisiti tecnici previsti dai maggiori enti di normalizzazione internazionali.

# new

# neu

# nouveau

# nuova

## 1 High Temperature Terminal Blocks

- 1 To suit modern reflow production techniques
- 1 Reduces manufacturing time and cost

## 2 PCB Edge Connection Terminal Blocks

- 1 Simplest possible connection to PCB's
- 1 Rising cage clamp for excellent stability

## 3 Smallest Possible Pin Pitch Push Fit Terminal Blocks

- 12.54mm Pitch Horizontal & Vertical
- 1 Also available in 5.08 & 7.62mm Pitch for increased Isolation, Creepage & Clearance

## 4 2.54mm Pitch Push Fit Terminal Blocks

- 1 Horizontal and Vertical cable entry
- 1 Also available with 5.08 and 7.6mm Pitch for increased Isolation, Creepage and Clearance

## 5 High Power Pluggable and Fixed Terminals

- 1 Up to 57A Current carrying capability
- 1 Up to 750V Rating
- 1 Up to 10mm<sup>2</sup> Wire

## 6 3.96mm and 3.81mm Pitch Push Fit Terminal Blocks

- 1 Voltage rating up to 300V

## 8 45° Cable Entry Plug

- 1 For angled Cable Entry

## 9 PCB Mounting Plugs

- 1 Vertical and Horizontal Mounting
- 1 Suitable for Mounting PCB Daughter Boards
- 1 Suitable for Panel Mounting Applications

## 10 Slim line 2.5mm (2.54mm) Pitch Vertical Entry Screwless Terminals

- 1 Reduced PCB Boards area

## 11 2 to 4 Tier Stacking Screwless Terminals

## 12 Professional Range or Pluggable Terminals expands to include Panel Mounting Blocks

## 13 3.5mm (3.81 mm) Pitch Plugs, multi-tier Sockets, Dual Entry Plugs (Horizontal and Vertical) Push Fit Sockets

## 14 5.0mm (5.08 mm) Piggy back headers

## 15 PCB Carriers

## 16 Panel Mounting Terminal Blocks

## 1 Hochtemperatur-Klemmleisten

- 1 Passend zu modernen Rückflussproduktionstechniken
- 1 Reduziert Herstellungszeit und -kosten

## 2 PCB-Klemmleisten

- 1 Einfachster möglicher Anschluss zu PCB's
- 1 Anschlussklemmen für steigende Gehäuse für ausgezeichnete Stabilität

## 3

## Federdruckklemmleisten mit dem Kleinstmöglichen Stiftabstand

- 12.54mm Abstand horizontal und vertikal
- 1 Auch erhältlich in 5,08 und 7,62mm Abstand für erhöhte Isolierung, Kriechstrom und Zwischenraum

## 4

## Federdruckklemmleisten mit 2,54mm Abstand

- 1 Horizontaler und vertikaler Kabeleingang
- 1 Auch erhältlich mit 5,08 und 7,6mm Abstand, für erhöhte Isolierung, Kriechstrom und Zwischenraum

## 5

## Hochkraft steckbare und befestigte

- 1 Bis zu 57 A stromführende Fähigkeit
- 1 Bis zu 750V Nennleistung
- 1 Bis zu 10mm<sup>2</sup> Draht

## 6

## Federdruckklemmleisten mit 3,96mm und 3,81mm Abstand

- 1 Nennspannung erhöht 300V

## 8

## 45° Kabeleingangsstecker

- 1 Für einen angewinkelten Kabeleingang

## 9

## PCB-Befestigungsstecker

- 1 Vertikale und horizontale Befestigung
- 1 Geeignet zur Befestigung an Tochter-PCB Boards
- 1 Geeignet zur Befestigung bei Schalttafelanwendungen

## 10

## Federdruckklemmleisten mit vertikalem Eingang und Dünnnlinienabstand 2,5mm (2,54mm)

- 1 Reduzierte PCB-Plattenoberfläche

## 11

## Auf 2 bis 4 Ebenen gestapelte Federdruckklemmen

## 12

## Professionelle Reihe von steckbaren Klemmleisten wird expandiert um Schaltschranksbefestigungsstecker mit einzuschliessen

## 13

## Stecker mit 3,5mm (3,81mm) Abstand, Multi-Ebenenstecker, Schaltschranksstecker, Doppeleingangsstecker (horizontal und vertikal) Federdrucksöckel

## 14

## 5.0mm (5.08mm) Huckepackvorsatz

## 15

## PCB Träger

## 16

## Reihe ERMB

## 1 Borniers pour haute température

- 1 Pour convenir aux techniques modernes de soudure par refusions
- 1 Réduit le temps et le coût de fabrication

## 2

## Bornes avec la prise de connexion au bord du circuit imprimé

- 1 Connexion la plus facile et la plus simple aux circuits imprimés
- 1 Borniers à cage d'ascenseur (cage clamp) pour une excellente stabilité

## 3

## Borniers à entr'axe minimum

- 1 Distance de 2,54 mm horizontales et verticales
- 1 Disponible pour des ent'axes de 5,08 et 7,62 mm pour une meilleure isolation

## 4

## Borniers à entr'axe de 2,54 mm

- 1 Entrée de câble horizontal et vertical
- 1 Disponibilité avec une distance de 5,08 et 7,6 mm, pour l'isolation augmentée, ligne de fuite et distance d'isolation

## 5

## Borniers haute puissance enfichables

- 1 Capacité de la portée du courant jusqu'à 57A
- 1 Puissance nominale jusqu'à 750V
- 1 Câble jusqu'à 10mm<sup>2</sup>

## 6

## Borniers à entr'axe de 3,96 et 3,81 mm

- 1 Tensions nominales augmentées 300V

## 8

## Entrée de câble à 45°

- 1 Pour l'entrée du câble à un angle

## 9

## Prise de circuits imprimés

- 1 Montage vertical et horizontal
- 1 Convenable pour le montage de plaquettes de circuits imprimés filles
- 1 Convenable pour l'application de montage de panneaux

## 10

## Borniers compacts à entr'axe de 2,5 mm (2,54 mm)

- 1 Réduit la superficie du circuit imprimé

## 11

## Borniers de 2 à 4 étages

## 12

## Série professionnelle de borniers enfichables pour montage en armoire

## 13

## Connecteurs à entr'axe 3,5 mm (3,81 mm) connecteurs à étages, connecteurs pour armoire, connecteurs à double entrée (horizontale et verticale), socle à ressort

## 14

## Epingle à ferroulage 5,0 (5,08 mm)

## 15

## Support pour Circuits Imprimés

## 16

## Série ERMB

## 1 Morsetti per alte temperature

- 1 Per soddisfare le moderne tecniche di saldatura
- 1 Riduzione dei tempi e dei costi di produzione

## 2

## Morsetti per la connessione al bordo del circuito stampato

- 1 La più semplice connessione ad un circuito stampato
- 1 Tecnica di fissaggio a molla, per una migliore stabilità

## 3

## La gamma a pressione con il più piccolo passo disponibile

- 1 Passo da 2,54 mm sia in orizzontale che verticale
- 1 Disponibile anche con passo 5,08 e 7,62 per migliorare le capacità d'isolamento

## 4

## Terminali con innesto a pressione con passo da 2,54 mm

- 1 Ingresso cavo sia orizzontale che verticale
- 1 Disponibile anche con passo 5,08 e 7,62 per migliorare le capacità d'isolamento.

## 5

## Morsetti e connettori per alte potenze

- 1 Per correnti oltre fino a 57 A
- 1 Tensioni fino a 750 V
- 1 Serraggio di conduttori fino a 10mm<sup>2</sup>

## 6

## Morsetti da 3,96 mm e 3,81 mm con fissaggio a pressione

- 1 Morsetti a pressione con passo 2,54 mm ed ingresso cavi A 45°
- 1 Tensione d'esercizio aumentata 300V

## 8

## Connettori maschi con ingresso cavo a 45°

- 1 Per ingresso cavi angolato

## 9

## Connettori a petteine da circuito stampato

- 1 Montaggio orizzontale e verticale
- 1 Utilizzabile per la connessione sovrapposta di più schede Idonei per applicazioni con montaggio a pannello

## 10

## Terminali con innesto a pressione in versione compatta con passo da 2,5 mm (2,54 mm)

- 1 Riducono gli ingombri sul circuito stampato

## 11

## Morsetti a pressione con disposizione da 2 a 4 file

## 12

## Una gamma di morsetti professionali che include connettori per il montaggio a pannello

## 13

## Connettori maschi con passo da 3,5 mm (3,81 mm), connettori maschi multi piano, connettori maschi da pannello, connettori maschi a doppio ingresso (orizzontale e verticale), connettori femmina a pressione

## 14

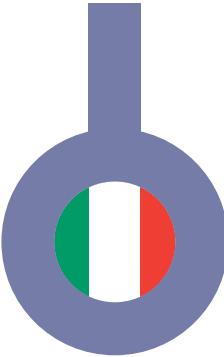

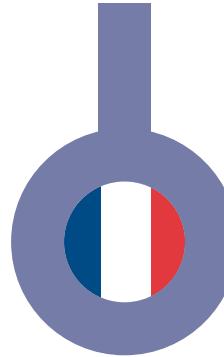

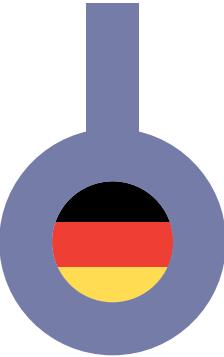

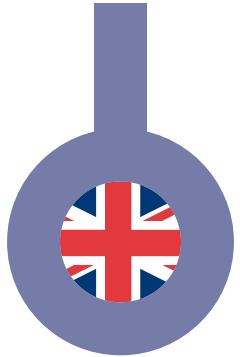

## 5,08 mm presa per connettore a due piani

## 15

## Supporti per circuiti stampati

## 16

## Serie ERMB

The IMO Standard wire protector terminal block types 100 and 500 are simple structure PCB type connectors. Models are available with round pins or square solder pins, from 3.50mm and 3.81mm, to 15mm pitches whilst offering the option of 90°, 135°, and 180° wire insertion directions.

The majority of types are available as basic units of 2-pole and 3-pole which allow combining together for any required pole length. The IMO 102 series is only available as a single moulding in fixed pole lengths however, this unit provides the largest wire capacity of this range, that being 4mm<sup>2</sup>.

This product type generally provides the most economical way of using a PCB terminal block and as such is extremely suitable for use in security, lighting and general electronic industries.

Die IMO Klemmleisten 100 und 500 aus der "Standard" Reihe sind unkomplizierte Platinensteckverbinder. Es sind Ausführungen mit Vierkant- oder Rundstift in den Rasterabständen 3,50mm; 3,81mm; 5,00mm; 5,08mm und 10mm erhältlich Kabeleinführung 90°, 135° und 180°.

Größtenteils sind diese Klemmleisten in 2- und 3-poliger Ausführung lieferbar und können so zu verschiedenen Längen kombiniert werden. Lediglich die Reihe IMO 102 ist ausschließlich als Einzelstück mit fester Länge erhältlich, kann dafür aber Adernquerschnitte bis zu 4mm<sup>2</sup> aufnehmen.

Dieses Produkt ist auf Wirtschaftlichkeit bei der Verwendungen von Platinen-Klemmleisten ausgelegt und eignet sich daher für Sicherheitsanwendungen, Beleuchtung und die Elektronikindustrie allgemein.

Les borniers à haute protection de fils types 100 et 500 de la série IMO Standard sont des connecteurs pour circuits imprimés de structure simple. Il existe différents modèles à bornes rondes ou carrées à souder avec pas de 3,50 mm, 3,81 mm, 5 mm, 5,08 mm et 10 mm avec entrée de câble à 90°, 135°, et 180°.

La plupart des borniers existent en version bi- ou tripolaire et peuvent se combiner pour obtenir n'importe quelle longueur. La série IMO 102 existe en une seule longueur fixe, mais elle peut accepter les plus gros câbles dans cette gamme, c'est-à-dire 4 mm<sup>2</sup>.

Ce type de produit est généralement le moyen le plus économique d'utiliser un bornier de circuit imprimé et il convient donc particulièrement bien aux industries de la sécurité, de l'éclairage et électronique.

Le morsettore IMO Standard, con protezione condutore delle serie 100 e 500 sono connettori a struttura semplice per montaggio su circuito stampato. Sono disponibili, modelli con pin a sezione circolare o quadrata, nei passi 3,50 mm; 3,81 mm; 5,00 mm; 5,08 mm; e 10 mm, con ingresso conduttore a 90°, 135° e 180°.

La maggior parte dei modelli, sono disponibili in versioni a 2 e 3 poli e possono essere liberamente abbinati per ottenere il numero di poli desiderato. La serie IMO 102 è disponibile unicamente in modelli monoblocco con numero di poli fisso. Tuttavia, questa serie consente il collegamento dei conduttori di maggior sezione (4 mm<sup>2</sup>) di tutta la gamma.

Questo tipo di prodotto, rappresenta generalmente la soluzione più economica per l'utilizzo di morsetti su circuito stampato, ed è pertanto ideale per l'utilizzo in applicazioni di sicurezza, illuminazione ed elettronica generale.

The IMO Professional series of PCB type terminal blocks are designed with 3.5mm, 3.81mm, 5.00mm, 6.35mm, 7.50mm, 9.50mm, 10.00mm and 10.16mm pitches at 90°, 135° and 180° wire entry directions.

With the design of single level, two-level and three-level structures, the IMO Professional series offers options for your application.

The terminal blocks can accommodate various wire sizes from 28AWG to 6AWG whilst there is also a high power series that provides the designer with a high electrical capacity in a small space, for use in products such as power supplies and inverters.

The IMO Professional series uses a steel yoke as its fixture for the wire connection, and this enables the product to be maintenance free by offering an anti-vibration system preventing the wire from loosening whilst allowing for a large contact area and high reliability connection.

All of these series products conform to IEC 60998 and UL 1059 requirements and have obtained international approvals from bodies such as UL and VDE.

Most of the IMO Professional series are manufactured as standard in 2-pole and 3-pole versions, and using combinations of these two units, various lengths can be made. However, should the application require it, typically in mass production, IMO can supply the products in a single moulding, whilst at the same time we can also offer the service of printing and marking on the terminal blocks.

As the IMO Professional series uses a high reliability connection method, along with modern manufacturing techniques, this makes the product quality very stable and therefore suitable for industrial controls and information technology applications.

Die IMO Platinen-Klemmleisten aus der Reihe „Professional“ gibt es mit Rasterabständen von 3,5mm; 3,81mm; 5,00mm; 6,35mm; 7,50mm; 9,50mm; 10,00mm und 10,16 mm mit Kabeleinführungen in den Winkeln 90°, 135° und 180°.

Durch den möglichen Einbau auf 1, 2 oder 3 Ebenen bietet die IMO Modellreihe "Professional" viele Einsatzmöglichkeiten.

Diese Klemmleisten sind für Adernquerschnitte von 28AWG bis 6AWG geeignet. Zudem gibt es eine Ausführung, die trotz geringen Platzbedarfs für hohe Ströme und damit für Netzteile und Umrichter geeignet ist.

In der IMO Modellreihe „Professional“ kommen Stahlbügel für den Kabelanschluss zum Einsatz. Dadurch ist dieses Produkt wartungsfrei und verhindert ein Lösen des Kabels auch bei starken Vibratoren. So ergibt sich eine große Kontaktfläche mit hoher Zuverlässigkeit.

Die gesamte Modellreihe entspricht den Anforderungen von IEC 60998 und UL 1059 und ist nach UL und VDE international zugelassen.

Die meisten Klemmleisten aus der IMO Reihe „Professional“ werden in 2- und 3-poliger Ausführung hergestellt. Durch die Kombination dieser beiden Ausführungen können verschiedene Längen zusammengestellt werden. Bei größeren Mengen kann IMO jedoch diese Produkte auch als komplette Formstücke liefern, ggf. auch mit Aufdruck und Anschlussbezeichnungen.

Durch die äußerst zuverlässige Verbindungstechnik und moderne Herstellung der IMO Reihe "Professional" sind diese Produkte äußerst stabil und für die industrielle Steuerung sowie für Anwendungen in der Informationstechnik geeignet.

La série Professional de borniers pour circuit imprimé propose des pas de 3,5 mm, 3,81 mm, 5 mm, 6,35 mm, 7,50 mm, 9,50 mm, 10 mm et 10,16 mm avec une entrée de câble à 90°, 135° et 180°.

Avec ses structures à un, deux et trois niveaux, la série IMO Professional vous offre plusieurs options adaptées à votre application.

Les borniers acceptent plusieurs dimensions de câble, de 28AWG à 6AWG, et la série haute puissance offre une grande capacité électrique dans un espace restreint pour des produits tels que les alimentations électriques et les variateurs.

La culasse en acier utilisée pour la connexion du câble permet aux produits de la série IMO Professional d'être sans entretien grâce à un système anti-vibration qui empêche le câble de se desserrer tout en assurant une large zone de contact et une connexion extrêmement fiable.

Tous les produits de cette série sont conformes aux normes IEC 60998 et UL 1059 et ont reçu une homologation internationale d'organismes, tels que UL et VDE.

La plupart des produits de la série IMO Professional sont fabriqués en série en versions bi- et tripolaires et, en combinant ces deux unités, on peut obtenir diverses longueurs. Cependant si l'application le réclame, comme c'est souvent le cas pour la production de masse, IMO peut fournir des produits moulés en un seul bloc ainsi que des borniers imprimés et gravés.

La série IMO Professional est équipée d'une connexion haute fiabilité qui, associée aux techniques de production modernes, assure au produit une extrême stabilité qui le rend idéal pour les applications de commandes industrielles et informatiques.

Le serie di morsettiere per circuiti stampati IMO Professional sono disponibili con passi di 3,5 mm; 3,81 mm; 5,00 mm; 6,35 mm; 7,50 mm; 9,50 mm; 10,00 mm e 10,16 mm con entrata conduttore a 90°, 135° e 180°.

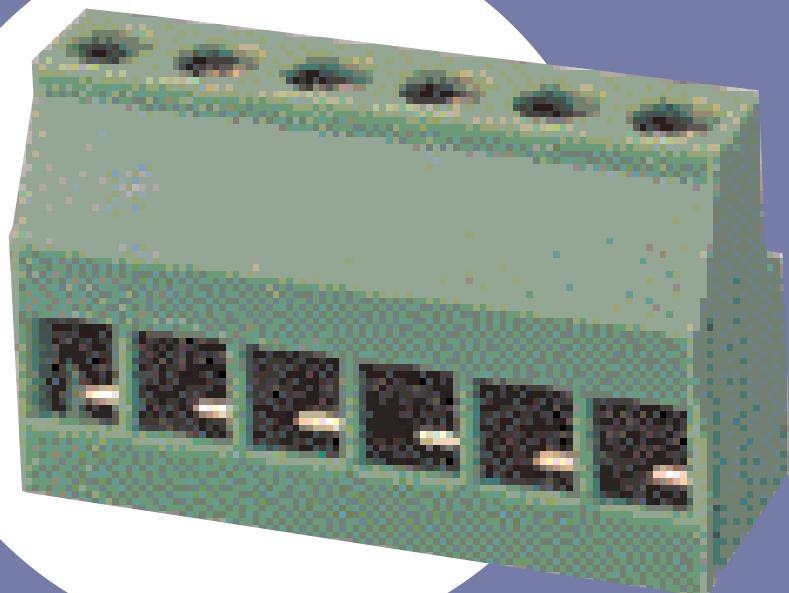

Disponibile in modelli a uno, due o tre livelli, la serie IMO Professional vi offre tutte le opzioni necessarie per le vostre applicazioni.

Le morsettiere possono accettare conduttori di varie dimensioni da 28AWG a 6AWG. È prevista anche una serie per alte potenze che offre al progettista una elevata capacità elettrica in uno spazio molto ridotto, ideale per l'utilizzo in prodotti quali alimentatori e inverter.

La serie IMO Professional utilizza un giogo in acciaio per il fissaggio del conduttore. Questo tipo di connessione è resistente alle vibrazioni, e prevede il distacco del conduttore, eliminando la necessità di manutenzione, offre inoltre una grande superficie di contatto assicurando un eccellente ed affidabile contatto elettrico.

Tutti i prodotti di queste serie, sono conformi alle normative IEC 60998 e UL 1059 e sono omologati da organismi internazionali quali UL e VDE. La maggior parte dei prodotti delle serie IMO Professional sono prodotti in versione a 2 e 3 poli e possono essere liberamente abbinati per soddisfare le più svariate esigenze. Ciononostante, in caso di esigenze specifiche, ad esempio produzioni di massa, IMO è in grado di fornire il prodotto prestampato in versione monoblocco nella configurazione desiderata, eventualmente anche applicando sul connettore le marcature desiderate. Il metodo di connessione ad elevata affidabilità e le tecniche di produzione più avanzate utilizzate nella serie IMO Professional conferiscono a questo prodotto una grande stabilità, rendendolo ideale per l'utilizzo in applicazioni informatiche e di controllo industriale.

The IMO 900 and 1500 plugs, used as part of our pluggable interconnect series of terminal blocks, can be used in a variety of sockets (headers). These sockets are available in 3.50mm, 3.81mm, 5.00mm, 5.08mm, 7.5mm and 7.62mm pitches with horizontal or vertical entry to meet your various design requirements; and for designs where space is limited IMO are also able to offer two-level sockets.

The 900 and 1500 sockets are manufactured to meet IEC 60998 and UL 1059 requirements and for designs where space is limited IMO are also able to offer two-level sockets.

Die Stecker aus den Reihen IMO 900 und 1500 für unsere einsteckbaren Verbinder können in viele verschiedene Buchsenleisten eingesetzt werden. Diese Buchsen sind mit Rasterabständen von 3,50mm; 3,81mm; 5,00mm; 5,08mm; 7,50mm und 7,62mm mit horizontaler oder senkrechter Kabeleinführung erhältlich, um möglichst vielen Einsatzbedingungen gerecht zu werden. Für beengte Platzverhältnisse bietet IMO zudem 2-Ebenen-Buchsen an.

Die Buchsen der Reihen 900 und 1500 entsprechen den Anforderungen von IEC 60998 und UL 1059 und sind nach UL und VDE zugelassen.

Les socles IMO 900 et 1500 sont utilisables avec divers supports (embases) dans notre série de borniers d'interconnexion enfichables. Elles existent avec des pas de 3,50 mm, 3,81 mm, 5 mm, 5,08 mm, 7,5 mm et 7,62 mm avec entrée de câble horizontale ou verticale qui leur permettent de s'adapter à vos diverses exigences de conception ; pour les conceptions dans lesquelles l'espace est restreint, IMO propose également des socles à deux niveaux.

Les socles 900 et 1500 sont fabriquées aux normes IEC 60998 et UL 1059 et elles sont homologuées UL et VDE.

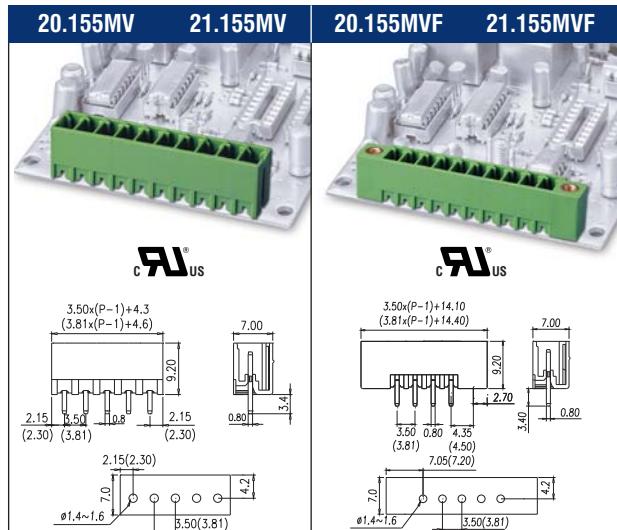

I connettori maschi delle serie IMO 900 e 1500 fanno parte della nostra serie di morsettiera a interconnessione e possono essere utilizzati con un gran numero di connettori femmina. Questi ultimi sono disponibili nei passi 3,50 mm; 3,81 mm; 5,00 mm; 5,08 mm; 7,5 mm e 7,62 mm con entrata conduttore orizzontale o verticale per soddisfare una vasta gamma di esigenze progettuali. Per le applicazioni in cui lo spazio è limitato, IMO offre anche connettori femmina a due livelli.

I connettori femmina delle serie 900 e 1500 sono prodotti in conformità con le normative IEC 60998 e UL 1059 e sono omologati UL e VDE.

## 155CP Key code for 1500 series sockets

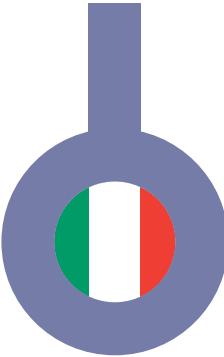

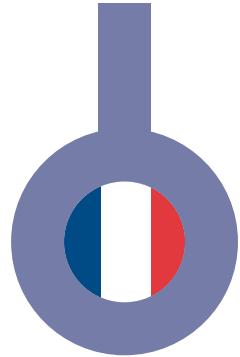

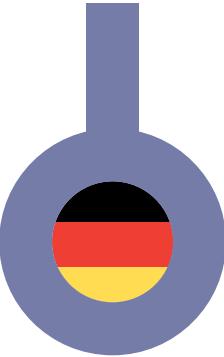

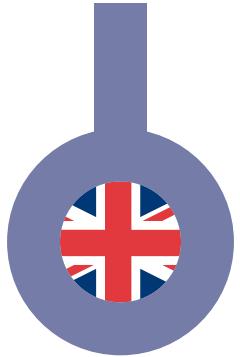

Part No: 21.155M/CP

## 900CP Key code for 900 series sockets

Part No: 21.900M/CP

To complement the standard range of PCB sockets, IMO has introduced a new high temperature version socket (HT range), which is suitable for the majority of reflow methods.

Rated from -40°C to 260°C and manufactured from high temperature resistant materials, it is available in pitches 3.5mm to 5.08mm, open ended or closed ended, with or without flange.

Als Ergänzung unserer Standard-Platinenbuchsen stellt IMO die neue Hochtemperaturversion (HT) vor, die für die meisten Fließlötungsverfahren geeignet ist.

Durch die Verwendung hochtemperaturfester Materialien umfasst der Temperaturbereich -40°C bis 260°C. Der Rasterabstand beträgt 3,5mm bis 5,08mm, seitlich offen oder geschlossen, mit oder ohne Flansch.

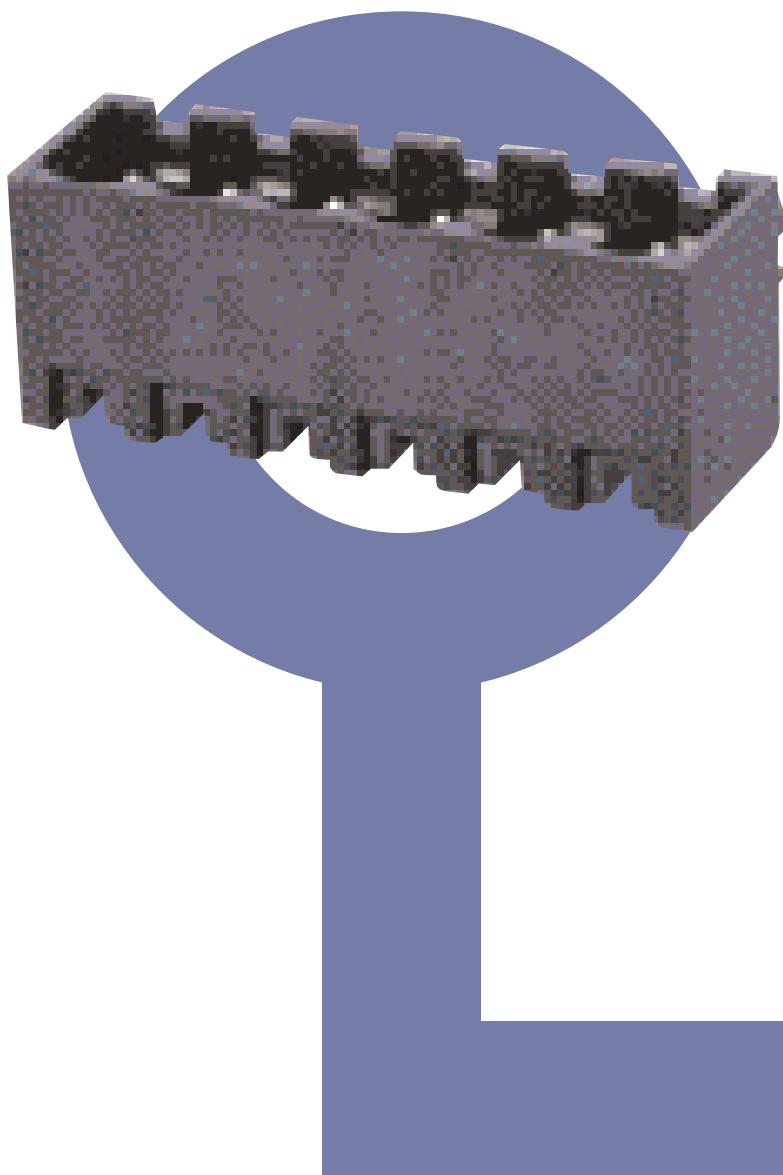

Pour compléter la gamme standard de socles pour circuits imprimés, IMO a créé un nouveau socle spécial pour hautes températures (gamme HT), qui convient à la plupart des systèmes de refusion.

Prévu pour des températures comprises entre -40°C et 260°C et fabriqué en matériaux résistants aux températures élevées, il existe avec des pas de 3,5 mm à 5,08 mm, avec extrémité ouverte ou fermée, évasé ou non.

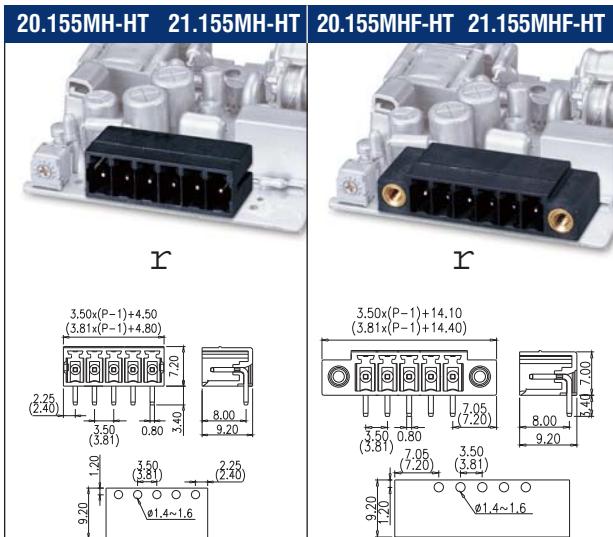

Per complementare la gamma di connettori per circuiti stampati, IMO ha introdotto una nuova versione di connettore femmina (gamma HT) per alte temperature, adatta alla maggior parte dei metodi di saldatura tipo "reflow".

Capaci di sostenere temperature da -40°C a +260°C, questi connettori sono fabbricati in materiali termo resistenti e sono disponibili in passi da 3,5 mm a 5,08 mm, con estremità aperta o chiusa, con o senza flangia.

The 900 and 1500 series make up the plug side of our pluggable interconnect series of terminal blocks and are available in the following pitches 3.50mm, 3.81mm, 5.00mm, 5.08mm, 7.50mm and 7.62mm.

These series of plugs are available in horizontal, vertical, and front wire entry to meet multiple design requirements.

IMO's steel yoke design is utilised in these products to create a reliable connection suitable for use in industrial controls, information technology and other applications requiring highly reliable interconnection with the flexibility of simplified modifications and installations.

The 900 and 1500 series are manufactured to meet IEC 60998 and UL 1059 requirements and are approved by UL and VDE

Die Modellreihen 900 und 1500 bilden die Stecker für unsere einsteckbaren Verbinder und sind mit folgenden Rasterabständen lieferbar 3,50mm; 3,81mm; 5,00mm; 5,08mm; 7,50mm und 7,62mm.

Diese Stecker sind in horizontaler und senkrechter Ausführung, sowie mit Kabeleinführung von vorne erhältlich, um möglichst vielen Einsatzbedingungen gerecht zu werden.

Durch die IMO Stahlbügelkonstruktion ergibt sich eine zuverlässige Verbindung für den Einsatz in der industriellen Steuerung, Informationstechnik und anderen Anwendungen, bei denen nicht nur eine äußerst zuverlässige Verbindung erforderlich ist, sondern auch Änderungen und Einbau einfach vorstatten gehen müssen.

Die Modellreihen 900 und 1500 entsprechen den Anforderungen von IEC 60998 und UL 1059 und sind nach UL und VDE zugelassen.

Les séries 900 et 1500 sont des borniers de jonction enfichables ; elles existent dans les pas suivants : 3,50 mm, 3,81 mm, 5 mm, 5,08 mm, 7,50 mm et 7,62 mm.

Ces séries de fiches sont disponibles avec une entrée de câble horizontale, verticale et frontale qui leur permettent de s'adapter à diverses exigences de conception.

Ces produits sont équipés de la culasse en acier IMO qui garantit une connexion fiable convenant à une utilisation dans les applications de commandes industrielles et informatiques, et toute autre application exigeant une connexion extrêmement fiable dotée de la souplesse nécessaire pour permettre des modifications et une installation simples.

Les séries 900 et 1500 sont fabriquées aux normes IEC 60998 et UL 1059 et elles sont homologuées UL et VDE.

Le serie 900 e 1500 rappresentano la parte maschio delle nostre serie di morsettiera a interconnessione. Sono disponibili nei passi 3,50 mm; 3,81 mm; 5,00 mm; 5,08 mm; 7,50 mm; 7,62 mm.

Queste serie di connettori maschi sono disponibili con entrata conduttore orizzontale, verticale e frontale per soddisfare una vasta gamma di esigenze progettuali.

La speciale configurazione a giogo in acciaio, di progettazione IMO, impiegata in questi prodotti rende la connessione estremamente affidabile e li rende ideali per l'impiego in tutte le applicazioni informatiche, di controllo industriale, ecc. in cui l'estrema affidabilità della connessione deve essere abbinata a flessibilità e semplicità di modifica e installazione.

I Connettori delle serie 900 e 1500 sono prodotti in conformità con le normative IEC 60998 e UL 1059 e sono omologati UL e VDE.

### 900CP Key code for 900 Series Plugs

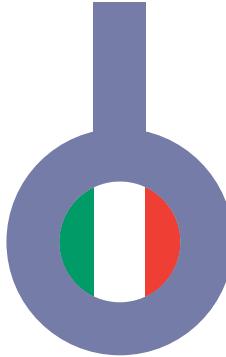

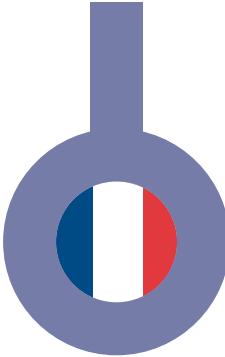

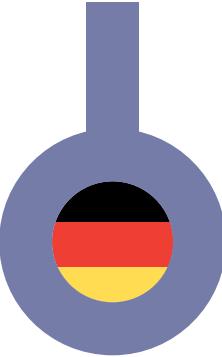

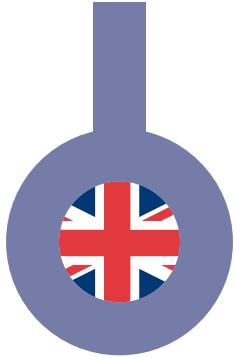

Part No: 21.950M/CP

### 900CP Key code for 900 Series Plugs

Part No: 21.950M/6CP

Mini Screwless, or push-fit, use a simple spring type clamp mechanism. The IMO 4000 and 5000 series terminal products are available with 2.54mm, 3.81mm, 3.96mm, 5.00mm, 7.50mm, 7.62mm pitches and allow ferruled or solid wires to be inserted into the block directly without the assistance of a lever. Flexible wires can also be accommodated within the block by the use of the lever to assist in the clamping action.

Within the 4000 and 5000 series range there is also a no-lever design which reduces the height of the housing for applications with limited space.

Removal of wire, is also easily facilitated, by pressing down the clamp with a screwdriver. Most of the screwless type terminals are assembled using single-pole units that allows for easy assembly of extended length product.

These products are designed according to IEC 60998 and UL 5059 standards, and the devices are UL and VDE approved.

The convenient wire connection method of this product is suitable for telecommunication systems, lighting systems, security and architectural wiring.

Die Einsteck-Klemmleisten aus der Reihe „Mini Screwless“ verwenden einen simplen Federklemmenmechanismus. Die Produkte aus den IMO Reihen 4000 und 5000 sind mit Rasterabständen von 2,54mm; 3,81mm; 3,96mm; 5,00mm; 7,50mm und 7,62mm erhältlich und ermöglichen den Anschluss von Volldrähten und Drähten mit Aderendhülse ohne Hebel. Aber auch Litzen können mit Hilfe des Hebels an diese Klemmleisten angeschlossen werden.

Innerhalb der Reihen 4000 und 5000 gibt es jedoch auch eine hebelfreie Ausführung die aufgrund der geringeren Höhe für begrenzte Platzverhältnisse geeignet ist.

Das Abziehen der Drähte geschieht ganz einfach indem man mit einem Schraubenzieher auf die Feder drückt. Die meisten schraubenlosen Klemmleisten sind einpolig ausgeführt und können leicht zu beliebigen Längen zusammengestellt werden.

Diese Produkte entsprechen den Anforderungen nach IEC 60998 und UL 5059 und sind durch UL und VDE zugelassen.

Durch den unkomplizierten Anschluss eignen sich diese Produkte vornehmlich für Telekommunikationsanlagen, Beleuchtungs- und Sicherheitssysteme sowie für die Gebäudeverdrahtung.

Le mini-bornier sans vis, ou encliquable, utilise un simple mécanisme de blocage par ressort. Les produits des séries IMO 4000 et 5000 existent avec des pas de 2,54 mm, 3,81 mm, 3,96 mm, 5 mm, 7,50 mm, 7,62 mm et permettent d'insérer des câbles à bagues ou pleins directement dans le bornier sans l'aide d'un levier. Ils peuvent aussi accepter des câbles souples grâce à un levier qui facilite l'action de blocage.

Les gammes 4000 et 5000 proposent aussi un produit sans levier avec une hauteur de logement réduite pour les applications avec un espace restreint.

Le retrait du câble est également facilité : il suffit d'appuyer sur la bride de blocage avec un tournevis. La plupart des borniers sans vis sont montés avec des unités monopolaires qui permettent de monter facilement un produit plus long.

Ces produits sont conformes aux normes IEC 60998 et UL 5059 et sont homologués UL et VDE.

Le système de connexion pratique de ce produit le rend idéal pour les systèmes de télécommunications, d'éclairage, de sécurité et de câblage dans le bâtiment.

Le mini morsettore a innesto senza viti, utilizzano un semplice meccanismo di bloccaggio a molla. Le morsettore delle serie IMO 4000 e 5000 sono disponibili in passi di 2,54 mm; 3,81 mm; 3,96 mm; 5,00 mm, 7,50 mm e 7,62 mm e consentono l'innesto di conduttori rigidi o con capocorda direttamente nel morsetto senza l'impiego della levetta. È possibile l'inserimento, anche di conduttori flessibili, utilizzando l'apposita levetta per facilitarne il bloccaggio.

Le serie 4000 e 5000 prevedono anche modelli senza levetta con profilo ridotto, per tutte le applicazioni in cui lo spazio è limitato.

L'estrazione del conduttore, è facilitata dalla pressione sulla molla con un cacciavite. La maggior parte dei morsetti senza viti, consiste di unità unipolari che consentono la facile configurazione di prodotti con il numero di poli desiderato.

Questi prodotti, sono progettati in conformità con le normative IEC 60998 e UL 5059 e sono omologati UL e VDE.

Il comodo metodo di connessione del conduttore in questi prodotti li rende ideali per l'utilizzo in applicazioni di telecomunicazioni, illuminazione, sicurezza e ingegneria civile.

The IMO 3000 series are a PCB product that uses a spring clamp terminal as the fixture for the wire connections and this product type is convenient to use and offers a maintenance free, anti-vibration highly reliable connection method.

The 3000 series is offered in pitches of 2.50mm, 2.45mm, 5.00mm, 5.08mm, 7.50mm, 7.62mm, 10.00mm and 10.16 and with three wire entry directions, 90°, 135°, and 180°C. For higher density wiring, for applications requiring limited space, IMO have product using two-level, three-level, and four-level connection rows.

The product is in conformance with IEC 60998 and UL 1059 international standards.

The screwless cage clamp terminal blocks are suitable for use with solid, stranded or ferruled wires and therefore are used widely in many applications in the industrial distribution and electrical equipment fields.

Die IMO Reihe 3000 ist für Platinen geeignet und verwendet Federklemmen zum Anschluss der Drähte. Dadurch ist dieses Produkt unkompliziert im Einsatz, wartungsfrei, vibrationssicher und äußerst zuverlässig.

Die Reihe 3000 gibt es mit Rasterabständen von 2,50mm; 2,45mm; 5,00mm; 5,08mm; 7,50mm; 7,62mm; 10,00mm und 10,16 mm mit Kabeleinführung im Winkel von 90°, 135° und 180°C. Bei begrenzten Platzverhältnissen kann durch den Einbau auf 2, 3 oder 4 Ebenen eine höhere Kabeldichte erreicht werden.

Dieses Produkt entspricht den internationalen Normen IEC 60998 und UL 1059.

Die schraubenlosen „Cage Clamp“ Reihenklemmen eignen sich für den Einsatz mit Volldrähten, Litzen und Aderendhülsen und sind daher in vielen

Bereichen (Kabelverteiler, elektrische Geräte) einsatzfähig.

Les produits de la série IMO 3000 sont des connecteurs de carte de circuit imprimé qui utilisent une bride de blocage à ressort pour les connexions de câble pratiques à utiliser, et qui offrent un système sans entretien et anti-vibration extrêmement fiable.

Les produits de la série 3000 existent avec des pas de 2,50 mm, 2,45 mm, 5 mm, 5,08 mm, 7,50 mm, 7,62 mm, 10 mm et 10,16 mm avec une entrée de câble à 90°, 135°, et 180°C. Pour un câblage de plus forte densité, pour les applications réclamant un espace restreint, IMO propose des produits avec baies de connexion à deux, trois et quatre niveaux.

Ces produits sont conformes aux normes internationales IEC 60998 et UL 1059.

Les borniers sans vis en cage d'éureuil et bride de blocage à ressort conviennent pour les câbles pleins, divisés ou bagués et ils sont donc largement utilisés dans de nombreuses applications dans les secteurs de la distribution industrielle et de l'équipement électrique.

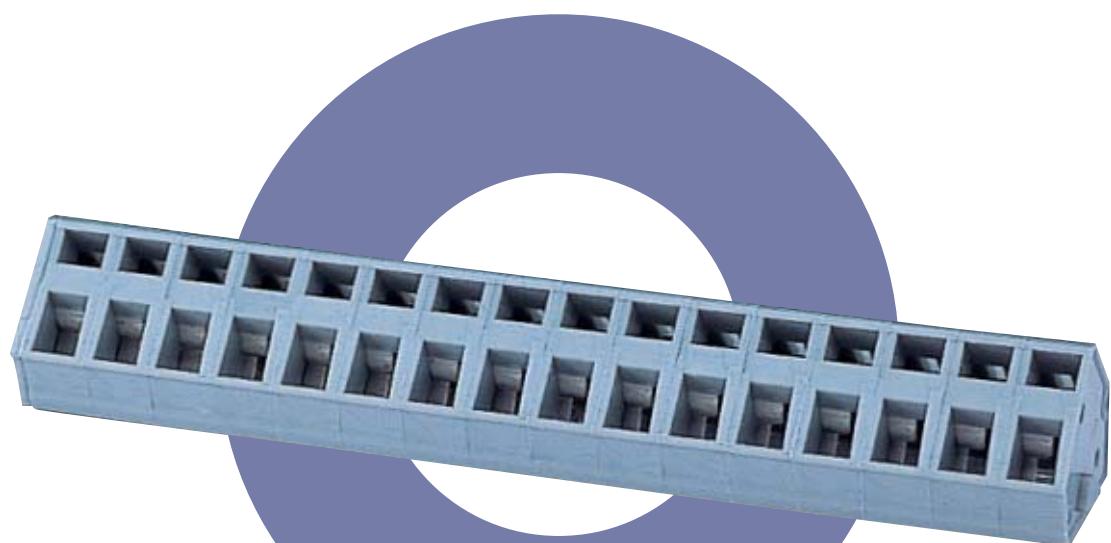

La serie IMO 3000 è un prodotto per circuito stampato, che utilizza un sistema a molla per il bloccaggio del conduttore. Questo prodotto, è di comodo utilizzo e fornisce un metodo di connessione che non richiede manutenzione, resistente alle vibrazioni e altamente affidabile.

La serie 3000, è disponibile con passi di 2,50 mm; 2,45 mm; 5,00 mm; 5,08 mm; 7,50 mm; 7,62 mm; 10,00 mm e 10,16 mm con entrata conduttore a 90°, 135° o 180°C. Per cablaggi ad alta densità, o per applicazioni in cui lo spazio è limitato, sono disponibili modelli a due, tre e quattro livelli di connessioni.

Il prodotto è conforme alle normative internazionali IEC 60998 e UL 1059.

Le morsettiera senza viti con molla a gabbia sono adatte all'uso con conduttori rigidi, a treccia o con capocorda e sono quindi ampiamente utilizzate in applicazioni di distribuzione industriale e in apparecchiature elettriche.

New to the IMO PCB terminal block range is the PCB carriers, allowing PCB's to be mounted directly to din rail.

PCB-CAR1 and 2 are supplied fully assembled, accepting PCB sizes 72mm and 107mm wide and PCB lengths from 20mm to 200mm.

PCB-CAR3 to 6 allows the customer to make up there own custom carrier with maximum PCB lengths to 2m.

Modules can be mounted onto all commercially available DIN rail.

Neu im IMO Klemmleisten-Produktprogramm sind die Platinenrahmen, die eine direkte Montage der Platine auf der DIN-Schiene ermöglichen.

PCB-CAR1 und 2 werden vollständig montiert geliefert und können Platinenbreiten von 72 mm und 107 mm bei einer Länge von 20 mm bis 200 mm aufnehmen.

PCB-CAR3 bis 6 ermöglichen es dem Kunden einen eigenen Rahmen zu erstellen, der für Platinen bis zu 2 m Länge geeignet ist.

Die Module können auf alle handelsüblichen DIN-Schienen montiert werden.

Les supports pour circuits imprimés viennent d'être ajoutés à la gamme de borniers de circuit imprimé IMO ; ils permettent de monter directement un circuit imprimé sur rail DIN.

Les produits PCB-CAR1 et 2 sont fournis entièrement montés et acceptent des cartes de 72 mm et 107 mm de large, et de 20 mm à 200 mm de long.

Les produits PCB-CAR3 à 6 permettent au client de fabriquer son propre support de carte jusqu'à une longueur maximale de 2 m.

Les modules peuvent être montés sur tous les rails DIN disponibles dans le commerce.

Una novità nella gamma di morsettiera per circuiti stampati IMO, i supporti per basette da circuito stampato (PCB) consentono il montaggio di circuiti stampati direttamente su guide DIN.

I modelli PCB-CAR1 e 2 sono forniti già assemblati, per l'utilizzo con PCB di larghezza 72 mm e 107 mm e di lunghezza compresa fra 20 mm e 200 mm.

I modelli PCB-CAR3 ~ 6 consentono, la realizzazione di supporti personalizzati per l'uso con PCB di lunghezza massima di 2 m.

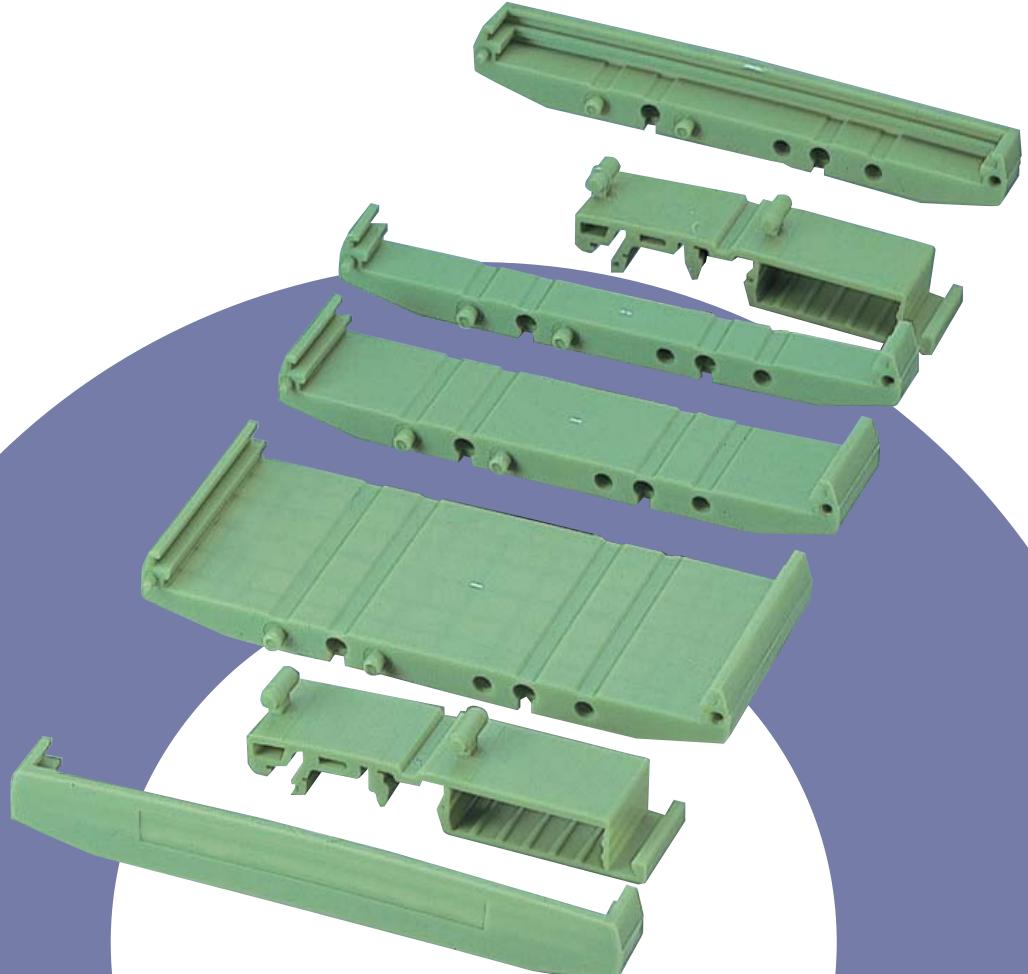

I moduli, possono quindi essere montati su guide DIN standard disponibili in commercio.

These are small panel mounting type terminal blocks available in 2.5mm<sup>2</sup>, 4mm<sup>2</sup> and 10mm<sup>2</sup> sizes. The standard single units can be combined together using the heavy duty buckles and spacers in order to make different length products; whilst, the versatility of this series allows four the 2.5mm<sup>2</sup> and 4mm<sup>2</sup> products to be mixed and assembled together. The ERMB series can accommodate the standard marking labels for identification of the blocks when wiring.

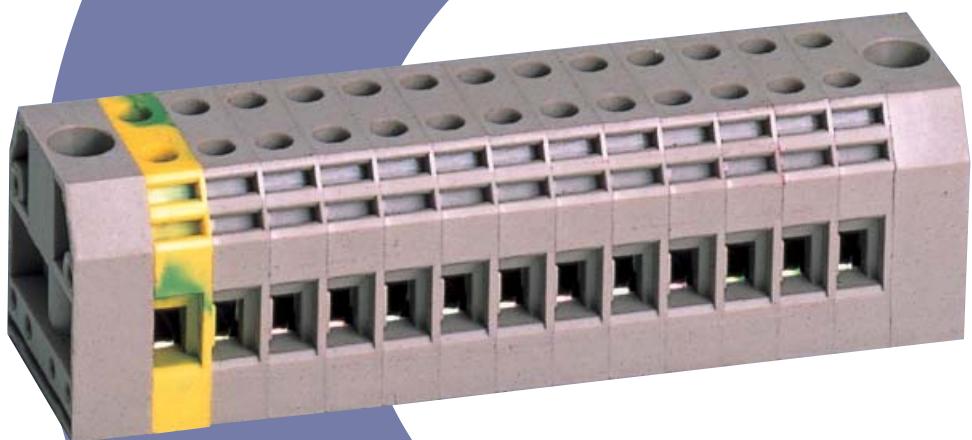

Dies sind kleine Klemmleisten zur Tafelmontage in den Größen 2,5mm<sup>2</sup>; 4mm<sup>2</sup> und 10mm<sup>2</sup>. Die Standardeinzelstücke können unter Verwendung der robusten Bügel und Abstandshalter zu verschiedenen Längen zusammengefügt werden. Die vielseitige Konstruktion ermöglicht zudem die gemischte Zusammenstellung von vier Komponenten mit den Größen 2,5mm<sup>2</sup> und 4mm<sup>2</sup>. Die ERMB Reihe ist für Standardetiketten zwecks Kennzeichnung der Verdrahtung ausgelegt.

Cette série comprend des petits borniers pour montage en armoire disponibles en 2,5 mm<sup>2</sup>, 4 mm<sup>2</sup> et 10 mm<sup>2</sup>. Les unités simples standard peuvent se combiner à l'aide de languettes robustes pour obtenir des produits de différentes longueurs ; la flexibilité de cette série permet de mélanger et d'assembler des produits de 2,5 mm<sup>2</sup> et de 4 mm<sup>2</sup>. La série ERMB accepte les étiquettes standard pour identifier les borniers pendant le câblage.

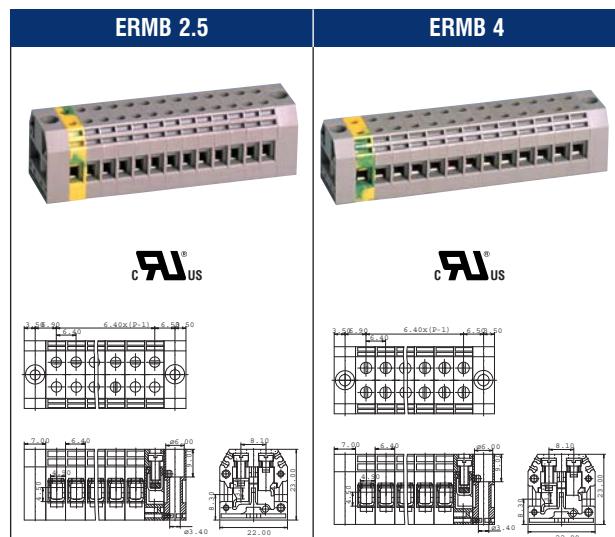

Morsettieri di ridotte dimensioni per montaggio a pannello, disponibili in taglie da 2,5 mm<sup>2</sup>; 4 mm<sup>2</sup> e 10 mm<sup>2</sup>. Le singole morsettieri standard possono essere accoppiate mediante appositi fermagli e separatori per ottenere prodotti della lunghezza desiderata. La grande versatilità di questa serie, consente di abbinare insieme i modelli da 2,5 mm<sup>2</sup> e 4 mm<sup>2</sup>. La serie ERMB, consente l'utilizzo di etichette di marcatura standard per l'identificazione dei cablaggi sui blocchetti.
