

Ultimate Power – Perfect Control

Vehicle Safety, Body and Powertrain Applications

For a comprehensive and reliable portfolio of products for automotive and other applications, look no further than the product range from Infineon. We have used our 40 years of experience of developing and producing products to meet the demands of the automotive market, and our innovative technologies to design and produce a large number of power products that meet all requirements of the automotive industry and also the transportation, lighting and motor-drive industries.

Our commitment to quality is demonstrated through our focus on Automotive Excellence, the most rigorous zero defect program in the industry.

This Selection Guide provides an overview of our ICs and their packages, which are automotive qualified and available for your current and future electronic system designs.

The ultimate power to control your applications including automotive, transportation, industrial, lighting and motor control.

Symbols

I_D	DC Drain Current	R_{thJC}	Thermal Resistance Junction to Case
$I_{GS(th)}$	Gate Source Threshold Voltage	V_{CE}	Collector Emitter Voltage
I_{IS}	Current Sense Output Current	$V_{CE(sat)}$	Saturation Collector Emitter Voltage
$I_{L(lim)}$	Load Current Limit	V_{DS}	Drain Source Voltage
$I_{L(NOM)}$	Load Current ($T_a = 85^\circ\text{C}$, specified PCB)	$V_{DS(AZ)}$	Drain Source Voltage (Active Zener)
$I_{L(sat)}$	Saturation Load Current	$V_{GS(th)}$	Gate Threshold Voltage
I_q	Quiescent Current in OFF-State	V_Q	Output Voltage
I_Q	Output Current	V_S	Supply Voltage
Q_G	Total Gate Charge	$V_{S(AZ)}$	Supply Voltage (Active Zener)
R_{IS}	Current Sense Resistor	$V_{S(op.)}$	Operation Supply Voltage
$R_{DS(on)}$	Typical Drain Source Resistance in ON-State @ 25°C (multiply by 2 for Max @ 150°C)	Inverse	Normal V_S Polarity and Inverse Load Current
$R_{DS(on) path}$	Typical Drain Source Resistance in ON-State @ 25°C of both High-Side and Low-Side	PWM	Pulse Width Modulation
		Reverse	Reverse V_S Polarity and Reverse Load Current

Automotive Applications

- Electric Sunroof
- HVAC

- Airbag

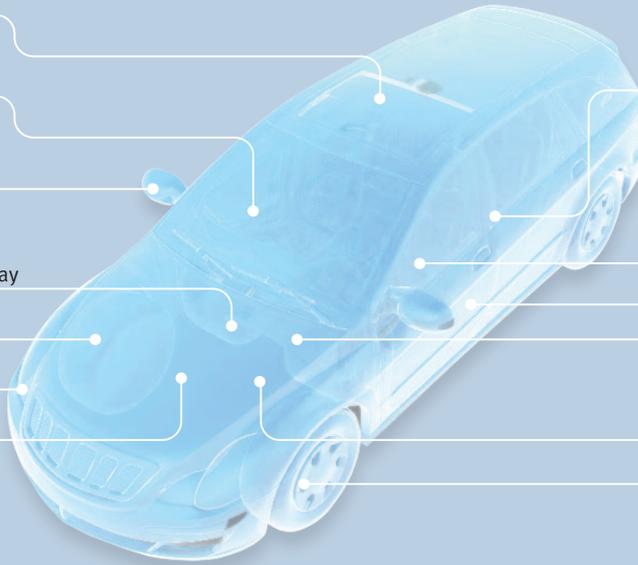

- Electric Mirrors

- Body Control Module/Gateway

- Starter Alternator

- Lighting

- Hybrid

- Suspension

- Window Lift
- Power Seat

- Power Door

- Steering

- Throttle Control
- Engine Control
- Transmission

- Brake System

Automotive Power Components Used in Other Applications

Agriculture

Transportation/Navigation

2-4 Wheeler

Lighting

Automation/Industrial

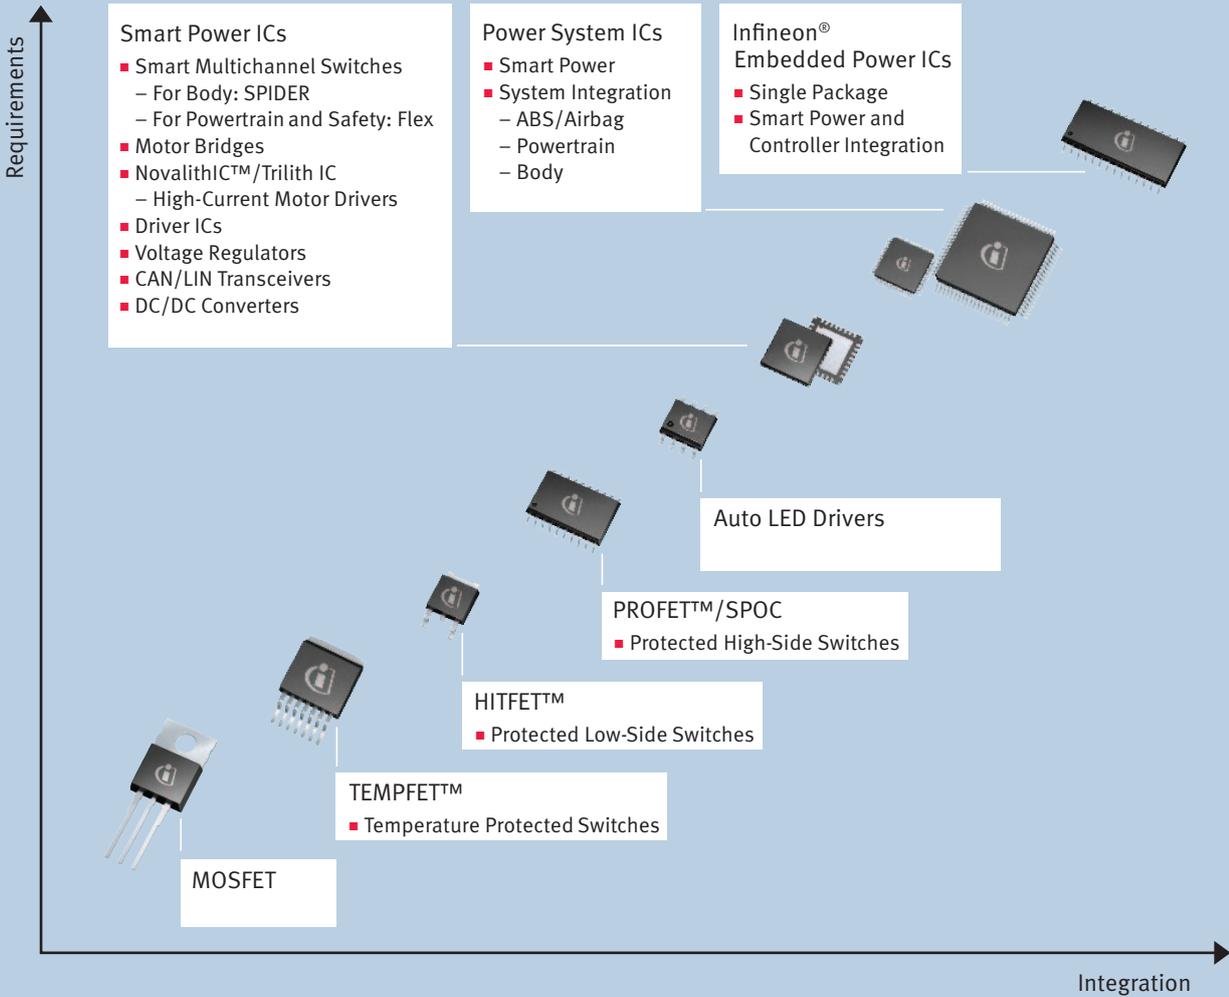

Toys/Games

Electric Tools/Home Appliance/Heating Pump

We meet all requirements for cost-effective application solutions

Body Applications

Body Control Module

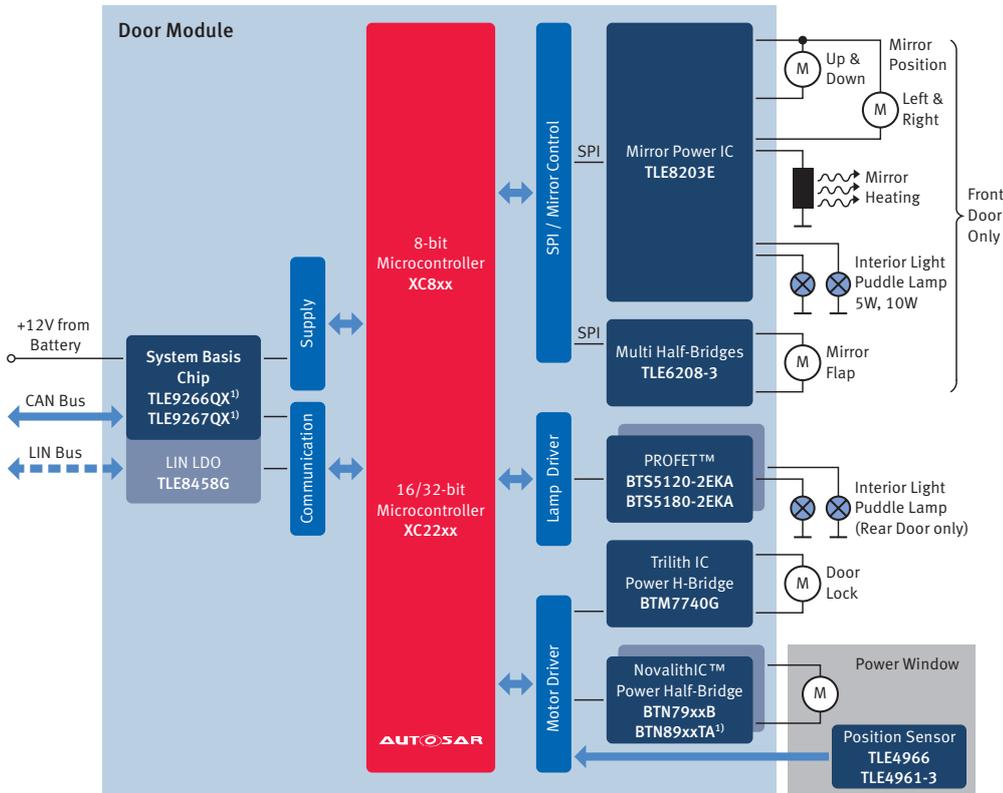

System Benefits

- Reduced board space due to integrated functionality
- Protected load control with sophisticated diagnostic features
- Supports the “Limp Home” functional safety concept
- High scalability and benchmark short-circuit robustness of power semiconductors (PROFET™)
- Supports a smooth transition to LEDs for interior and exterior lighting

1) In development, samples available

2) In development

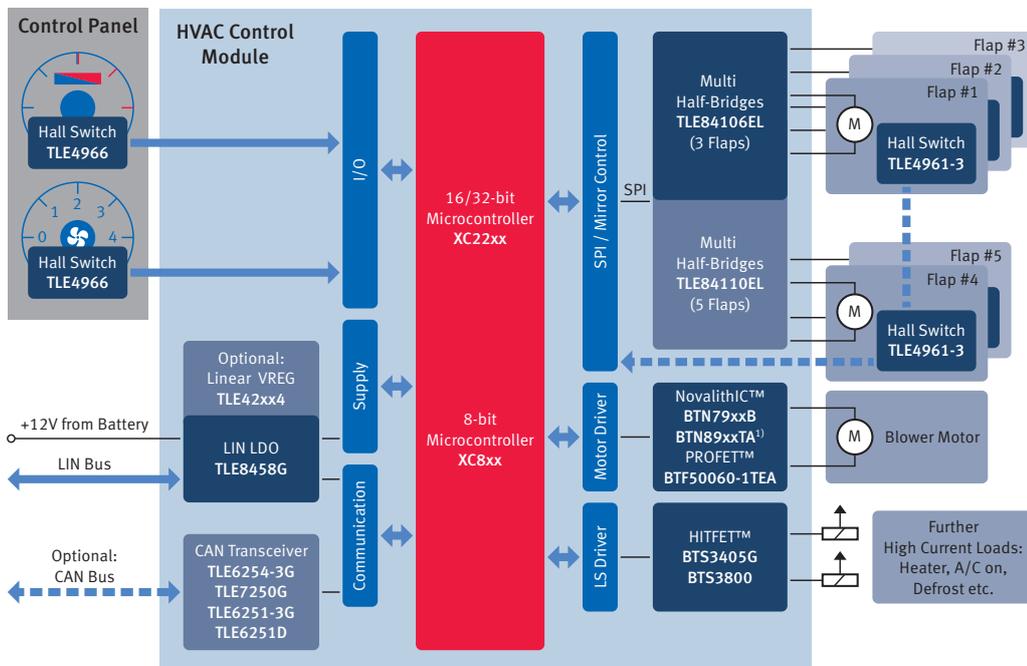

Full Featured Door Module including Door Lock and Mirror Control

System Benefits

- Energy-saving mode with second power domain for cyclic wake-up
- Motor drive modules CCU6
- Highly flexible serial interfaces (USIC), suitable as LIN, SPI, IIC, UART, IIS
- Fully scalable over package and memory
- High-performance CPU for ripple count algorithm
- High-speed ADC: 650ns conversion cycle

HVAC Control Module Low to Mid-End/Manual + Semi-Automatic

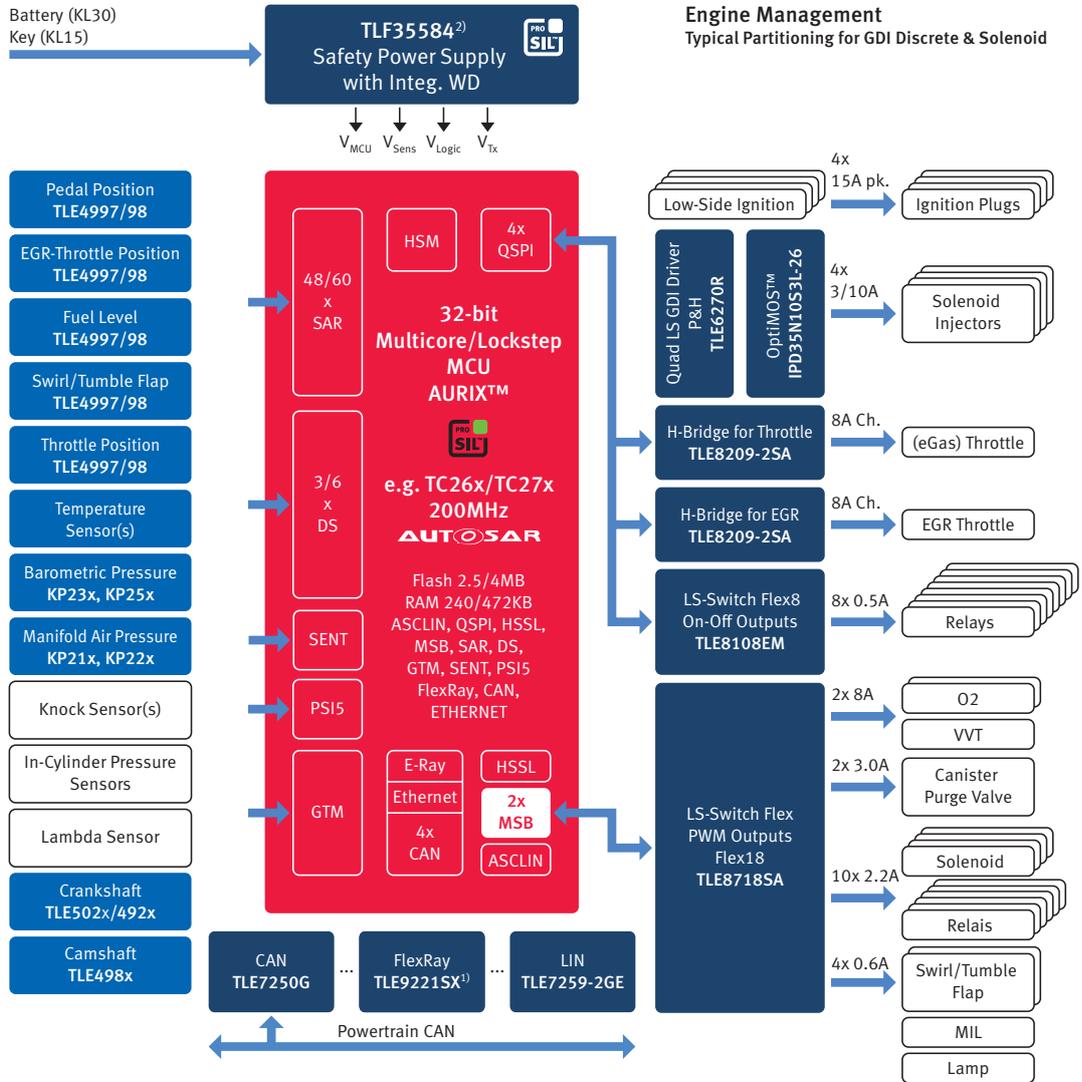

System Benefits

- High-performance, scalable microcontroller family for various classes of HVAC control algorithms
- Dedicated multi half-bridge devices for flap motor control with potentiometer feedback
- Powerful half-bridge devices (NovalithIC™) with high-frequency PWM capability for the blower control

1) In development, samples available

Powertrain Applications

Gasoline Engine Management

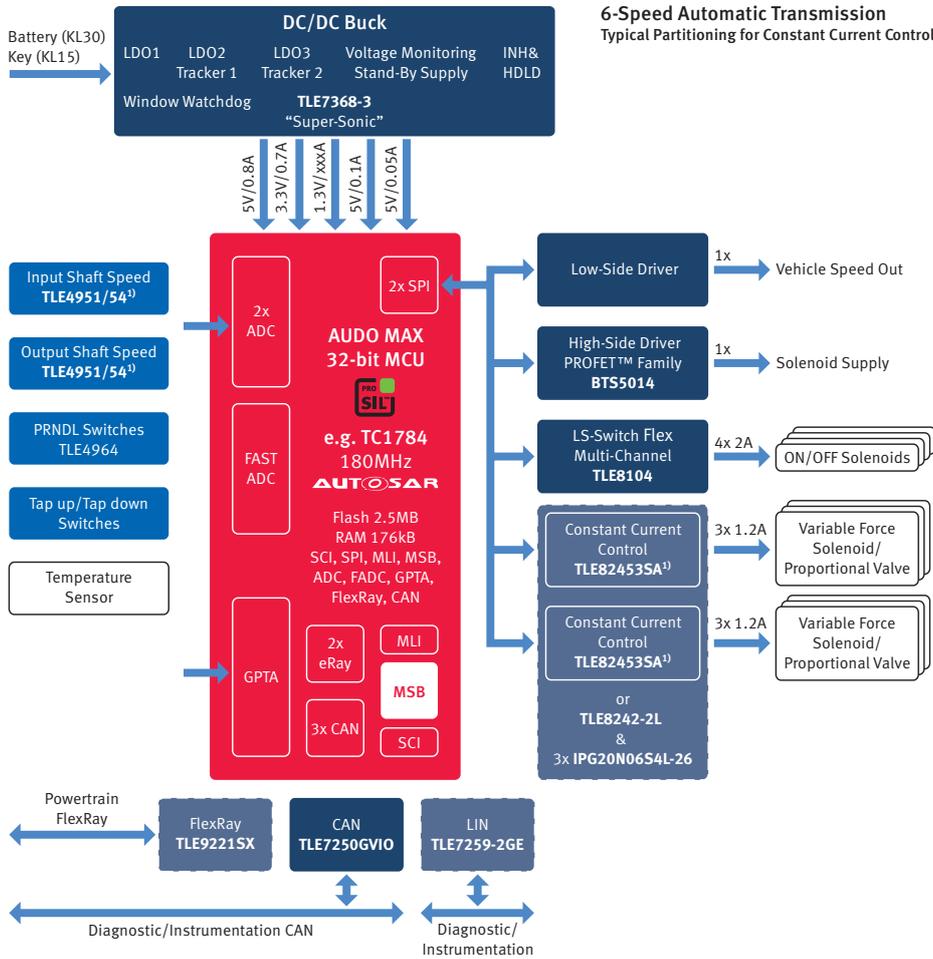

System Benefits

- Flexible and scalable product portfolio tailored to the performance and real-time needs of the premium and value segment
- Conforming with the latest emission legislation at the highest possible fuel efficiency and maximum driving pleasure (e.g. reduces fuel consumption by 20% from 160g to 128g CO₂/km)
- Benchmark-setting real-time performance facilitates down-sizing, direct injection, turbo charging and highly-efficient after-treatment
- New sensor families provide enhanced measurement precision (e.g. ignition control, misfire detection)

1) In development

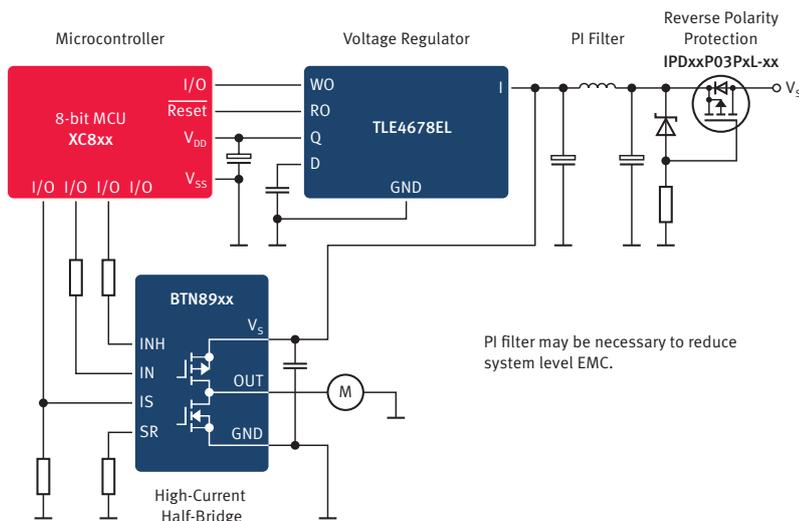

Automatic Transmission – Hydraulic Control

System Benefits

- Full range of products ranging from voltage regulators, transceivers, sensors, microcontrollers and smart power drivers
- Valve actuator ICs supporting highest precision current control
- Optimized sensors providing enhanced disturbance immunity (e.g. vibration) and direction detection
- High-temperature bare die IC supporting integrated transmission control up to the highest torque rates
- Reduces fuel consumption compared to manual transmission (e.g. by 2% from 160g to 156.8g CO₂/km)

Fuel Pump

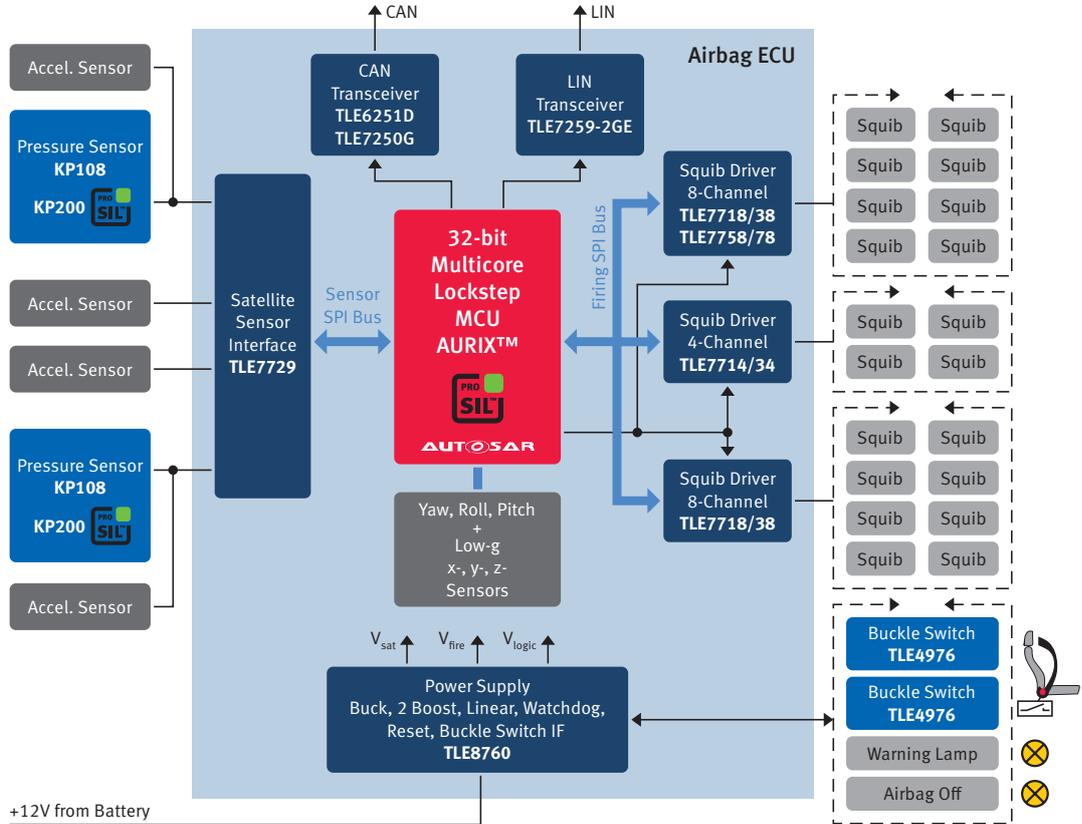

System Benefits

- Runs at full speed only when necessary
- Power consumption reduced by 40% on average
- Lower hydrocarbon emissions
- Increased lifetime

1) In development, samples available

Safety Applications

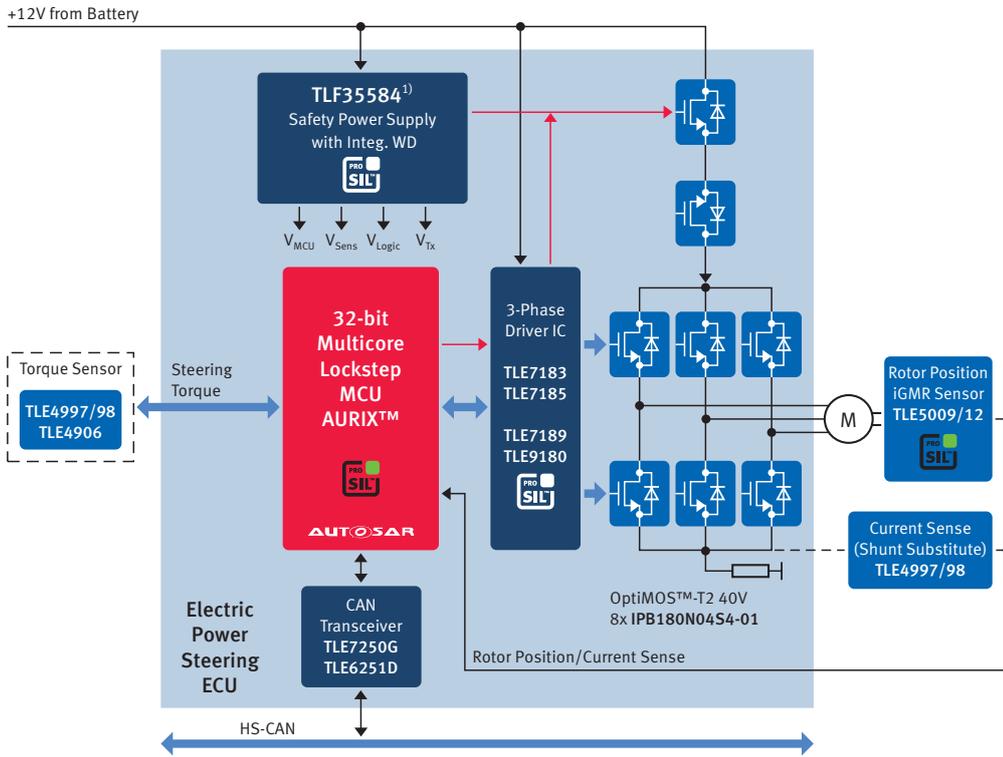

Airbag System (Advanced)

System Benefits

- Infineon's broad product spectrum supports scalability and flexibility for building systems with 4 up to more than 20 firing loops
- Full range of airbag ASSPs ranging from pressure sensors for side crash detection to driver and transceiver ICs
- 16/32-bit microcontrollers with dedicated safety functions
- The parts are optimized in terms of system interoperability as well as best price/performance in this extremely price-sensitive application

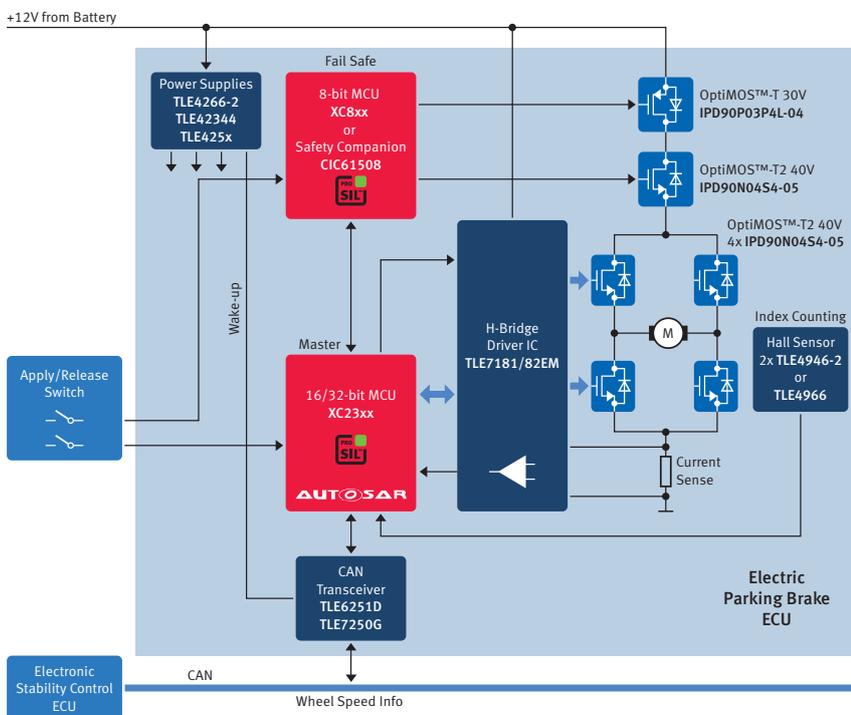

Electric Power Steering (EPS)

System Benefits

- EPS increases fuel efficiency by approximately 3% while improving car handling and the driving experience
- These EPS systems combine a compact design and reduced mounting costs with the ability to be adapted by software to suit diverse car models as well as dedicated driving modes
- EPS is the steering technology needed to enable advanced driver assist systems such as side-wind compensation, lane assist/keeping and parking aid assist systems
- Infineon has over ten years of experience in this exciting application and provides the full range of ICs, from sensor to microcontroller, from bridge driver to world-class MOSFETs

Electric Parking Brake

System Benefits

- The electric parking brake provides many more comfort and convenience features to drivers than the standard mechanical system
- Hill hold, launch control, roll-away prevention
- These convenience features are also safety-relevant, so they must be implemented using safety-capable hardware (according ISO26262)
- With its CIC61508 safety watchdog IC, Infineon offers a broad range of SIL-supporting functions to enable system designs that have to meet the new SIL and ASIL challenges

1) In development

Automotive MOSFETs

Infineon OptiMOS™ – Benchmark for Automotive MOSFETs

OptiMOS™ Products are Best in Class

OptiMOS™ superior performance is based on Infineon’s leading MOSFET technology combined with the unsurpassed quality of robust package:

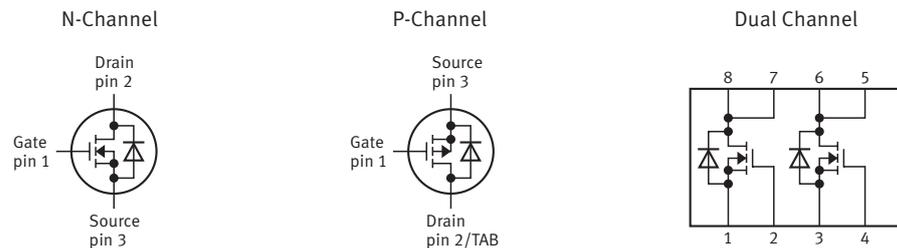

- Best in class $R_{DS(on)}$ performance for increased system efficiency
- Lowest switching and conduction power losses for increased thermal system reliability
- Robust green package for easy process handling

OptiMOS™-T2 Product Family

OptiMOS™-T2 trench technology is the benchmark for applications in energy efficiency, CO₂ reduction, electric drives, etc.. The OptiMOS™-T2 product family extends the existing families of OptiMOS™-T and OptiMOS™.

OptiMOS™ Robust Green Package

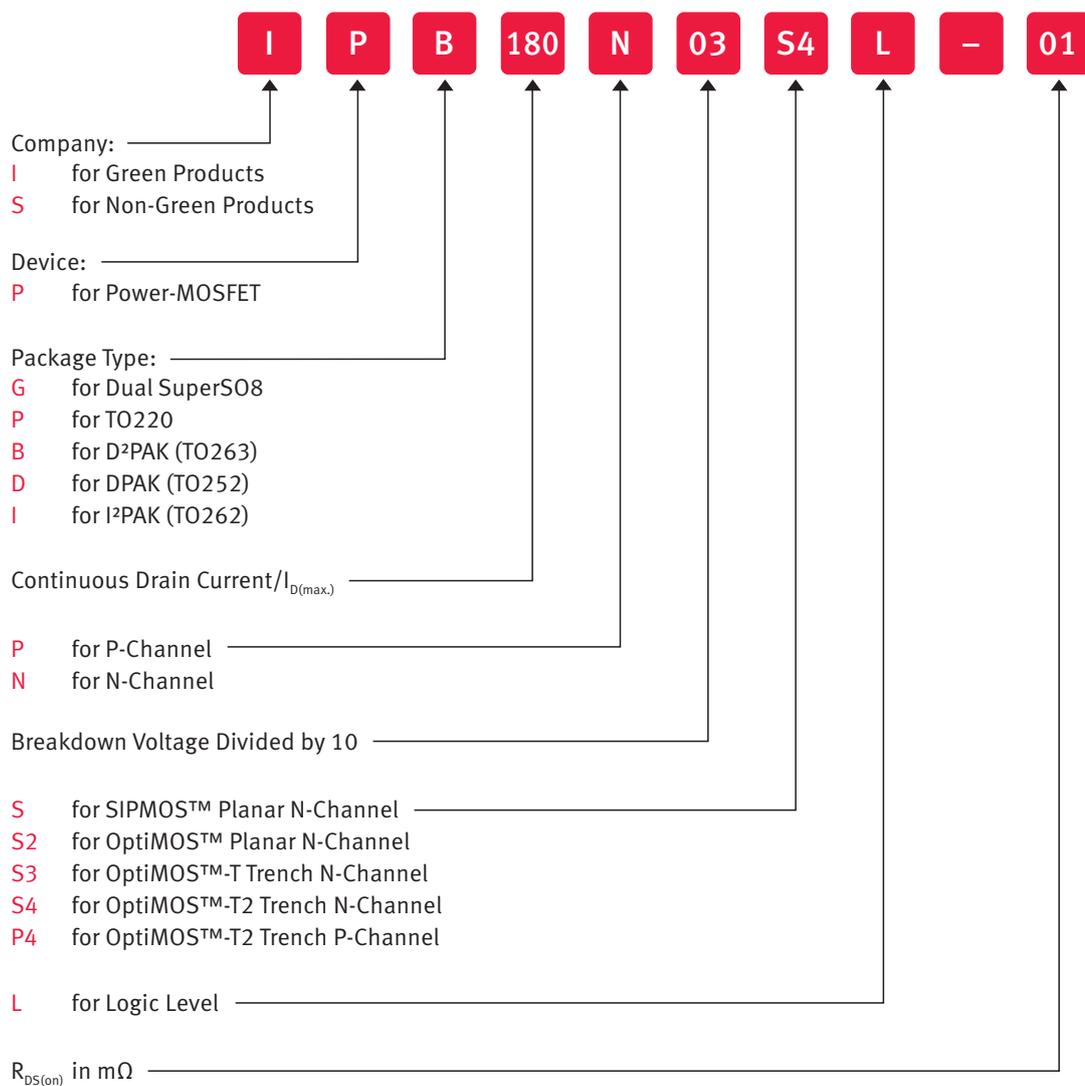

OptiMOS™ robust package is the benchmark for quality and reliability. Robust package sustains 260°C GREEN reflow processes at MSL1 combined with automotive qualification. No special handling or dry-pack is needed. All green packages are in compliance with RoHS/WEEE guidelines.

Small Signal MOSFETs

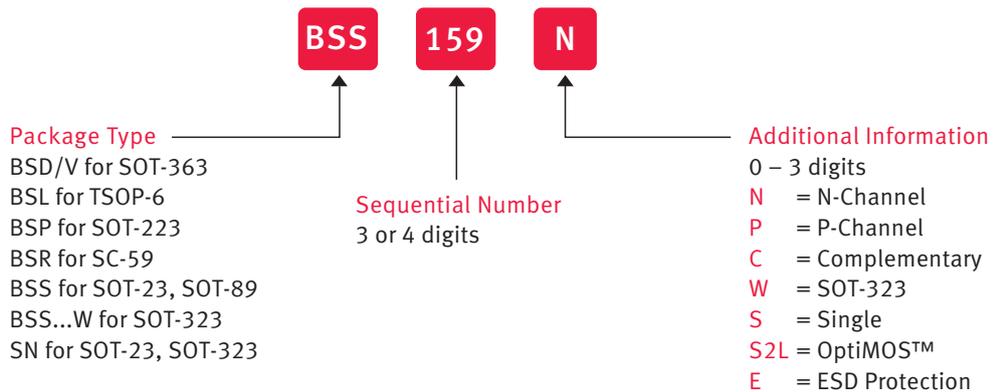

Infineon offers a full range of Small Signal MOSFETs qualified according AEC Q101.

The portfolio includes:

- Polarity: N-Channel enhancement, N-Channel depletion and P-Channel MOSFETs
- Voltage classes: -250 ... 800V
- V_{GS} rating: 10V (Normal Level), 4.5V (Logic Level), 2.5V (Super Logic Level), 1.8V (Ultra Logic Level)
- Packages: SOT-223, SOT-89, TSOP-6 (single and dual), SC-59, SOT-23, SOT-323, SOT-363 (single and dual)
- Configuration: single, dual, complementary (n+p pairs)
- Additional features: the products with names ending by "E" have an integrated ESD protection

SC-59 is an enhanced version of the SOT-23: its footprint compatible with SOT-23, but allows a bigger chip inside, therefore a lower $R_{DS(on)}$.

Power MOSFETs

650V CoolMOS™ CFDA

With the new 650V CoolMOS™ CFDA, Infineon launches its second generation of market leading Automotive qualified high voltage CoolMOS™ MOSFET. In addition to the well-known attributes of high quality and reliability required by the automotive industry, the new CoolMOS™ CFDA series provides now also an integrated Fast Body Diode.

This Fast Body Diode is the key for addressing resonant switching topologies resulting in lower switching losses due to the low gate charge. The softer commutation behavior and consequent reduced EMI appearance gives the CoolMOS™ CFDA series a clear advantage in comparison with competitor parts. Furthermore, limited voltage overshoot during hard commutation of the body diode enables easier implementation of layout and design.

The broad 650V CoolMOS™ CFDA portfolio provides all benefits of fast switching Superjunction MOSFET fulfilling the enhanced reliability requirements for automotive applications realized with special screening measures in Front End and Back End as well as the qualification compliant to AEC Q101.

Therefore, the new 650V CoolMOS™ CFDA technology is the best choice for switching topologies in Automotive applications.

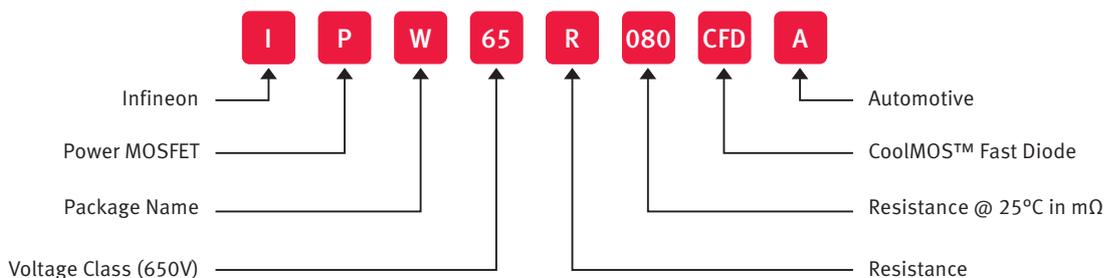

Key Features

- First 650V automotive qualified technology with integrated fast body diode on the market
- Limited voltage overshoot during hard commutation – self limiting di/dt and dv/dt
- Low gate charge value Q_g
- Low Q_{rr} at repetitive commutation on body diode & low Q_{oss}
- Reduced turn on and turn off delay times
- Compliant to AEC Q101 standard

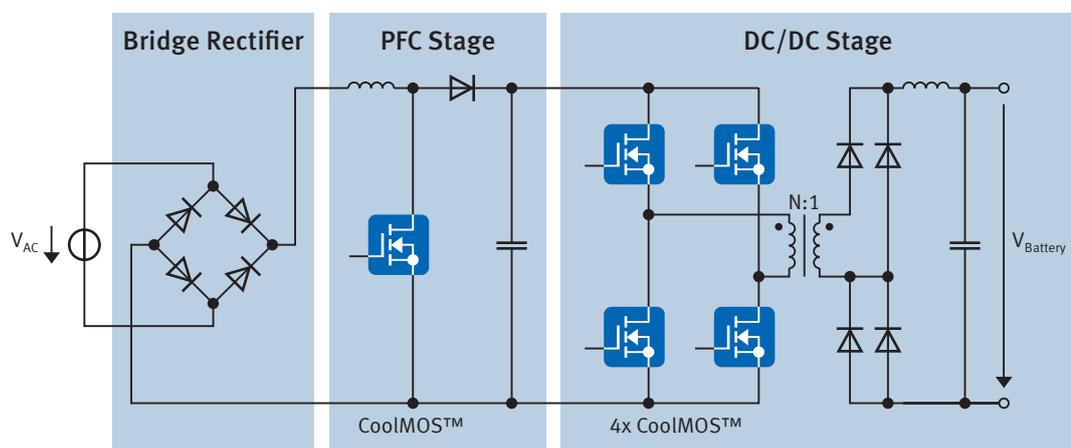

Applications

- Unidirectional and bidirectional DC/DC converter
- Battery charge
- HID lighting

TEMPFET™: Temperature Protected Switches

TEMPFET™ provides the first level of temperature and current protection via its temperature sensor (available on external pins). Additionally, it enables direct gate access and flexible temperature response control.

Features

- Logic level input
- Analog driving capability
- Potential-free temperature sensor
- High-speed switching (100kHz)
- Overload protection and thermal shutdown with external circuit
- Avalanche rated

Block Diagram

HITFET™: Low-Side Protected Switches

HITFET™ provides a high level of protection for overtemperature, short-circuit, overcurrent, overvoltage, open-load and ESD-sensitive circuits. HITFET™ combines all these protection features in one easy-to-use device. Infineon has recently expanded its HITFET™ portfolio into low range $R_{DS(on)}$ (BTS3160D and BTS3256D) and into 24V parts (BTS3xxxSDx).

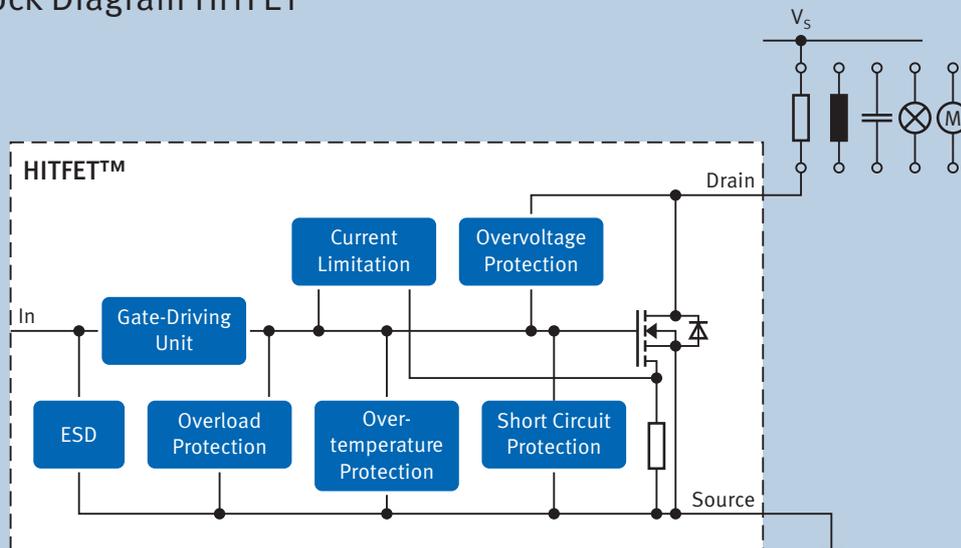

Features

- Overtemperature protection
- Overload protection
- Current limitation
- Short-circuit protection
- Open-load detection
- Thermal shutdown with auto-restart or latch behavior
- Overvoltage protection
- Logic level input
- Electrostatic Discharge (ESD) protection
- Linear drive capability
- Status feedback
 - Digital flag or with external resistor
 - Analogous with external resistor at input

Automotive and Industrial Applications

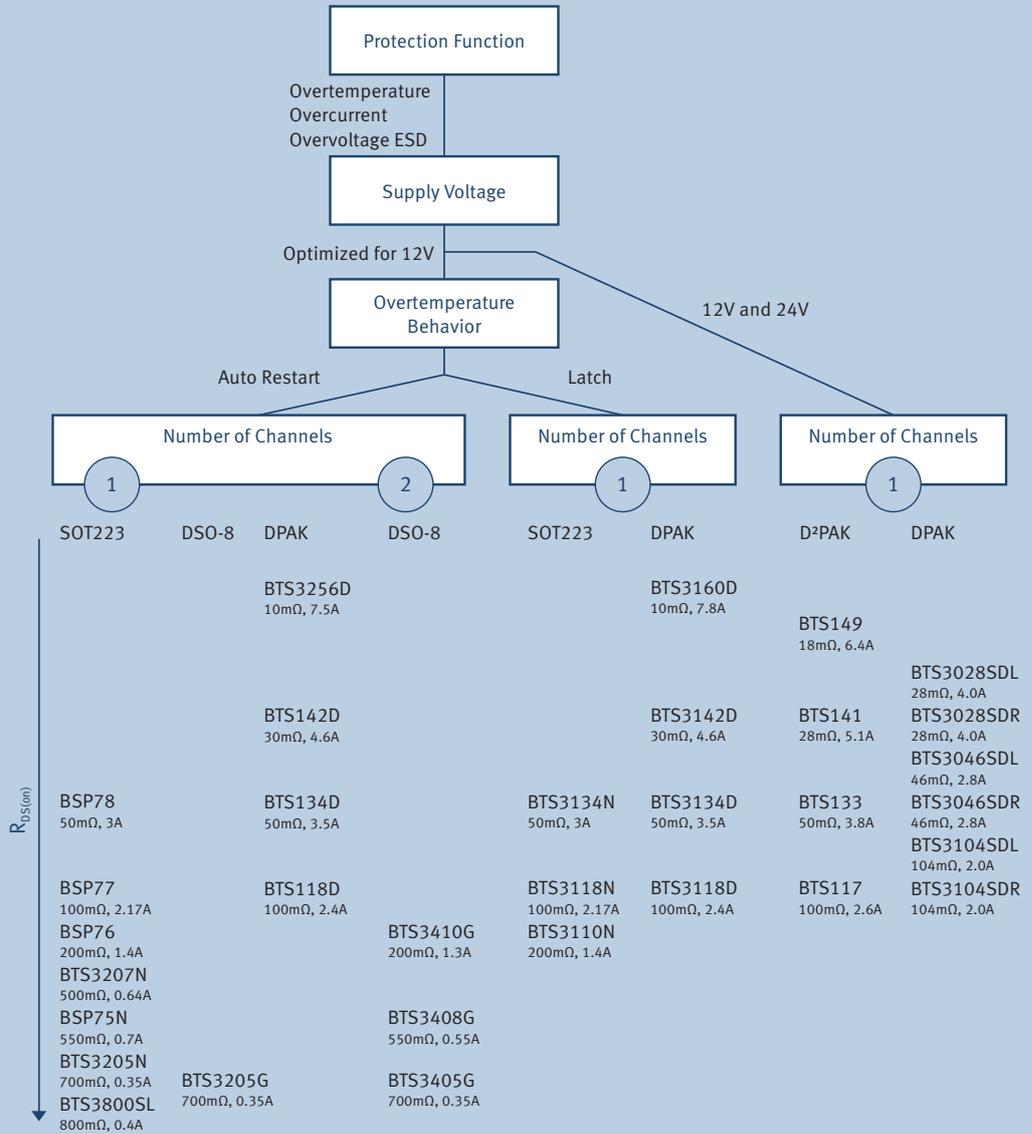

- Relays
- Fans and pumps
- Solenoids
- Valves
- Heating element
- Bulbs and LEDs
- Fuses
- Line drivers and supply switches

Smart Multichannel Switches for Body: SPIDER – SPI Driver for Enhanced Relay Control

SPIDER stands for SPI Driver for Enhanced Relay control. SPIDER products are the smallest relay drivers in the market with innovative features and packages.

With the SPIDER family Infineon offers a wide choice of integrated Multichannel switches specially designed for the control of small loads like relays, LEDs and small motors.

The new modular family is scaled by $R_{DS(on)}$, packages and add-on features. They come in 4- and 8-channel low-side configurations (SPIDER Low-Side), as well as configurable 8-channel high-/low-side configurations (SPIDER High-/Low-Side).

It offers not only the scalability through the number of channels and the current density, but also flexibility regarding enhanced features like parallel inputs for PWM, limp home and low-voltage cranking.

A variety of packages is available in order to serve different applications.

Applications

- Relays
- Small LEDs
- Valves
- Solenoids
- DC and stepper motors

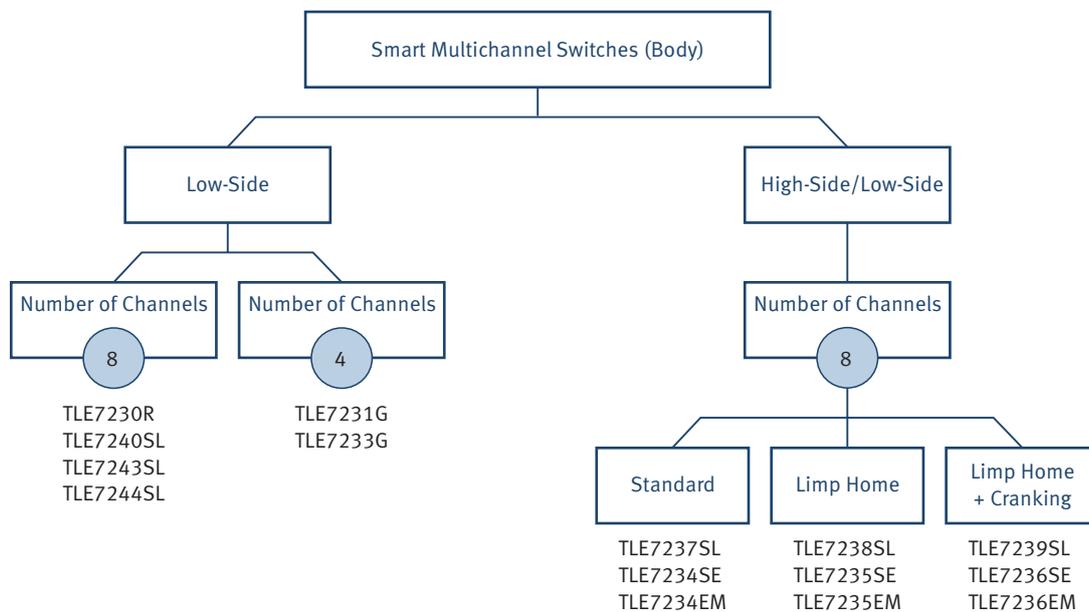

Features

- SPI (Serial Peripheral Interface)
- Daisy-chain and detailed diagnostics via SPI
- Small package
- Four different packages
- Short-circuit, overload protection configurable behavior (limitation or shutdown), thermal shutdown configurable behavior (latch or restart)
- Fail safe mode (limp home)
- Low battery voltage operation (cranking)
- AEC-qualified green robust product (RoHS-compliant)
- Undervoltage shutdown
- Overload shutdown
- Short to GND detection
- Open-load detection
- Stand-by mode
- Daisy-chain capability

Smart Multichannel Switches for Powertrain and Safety: Flex

The Flex Multichannel Low-Side Switches family for powertrain, safety and industrial applications is specially designed to drive a various range of loads from relays, injector valves, oxygen probe heaters and general purpose solenoids, through to unipolar stepper motors. We offer a complete family concept with full scalability from 2 to 18 channels and leading edge technology.

All Flex Multichannel Switches have full certification and are equipped with embedded protection functions and enhanced diagnosis which are used in numerous industry platforms.

Application

- Engine management systems
- Diesel direct injection
- Gasoline direct injection
- Multi port injection
- Industrial applications

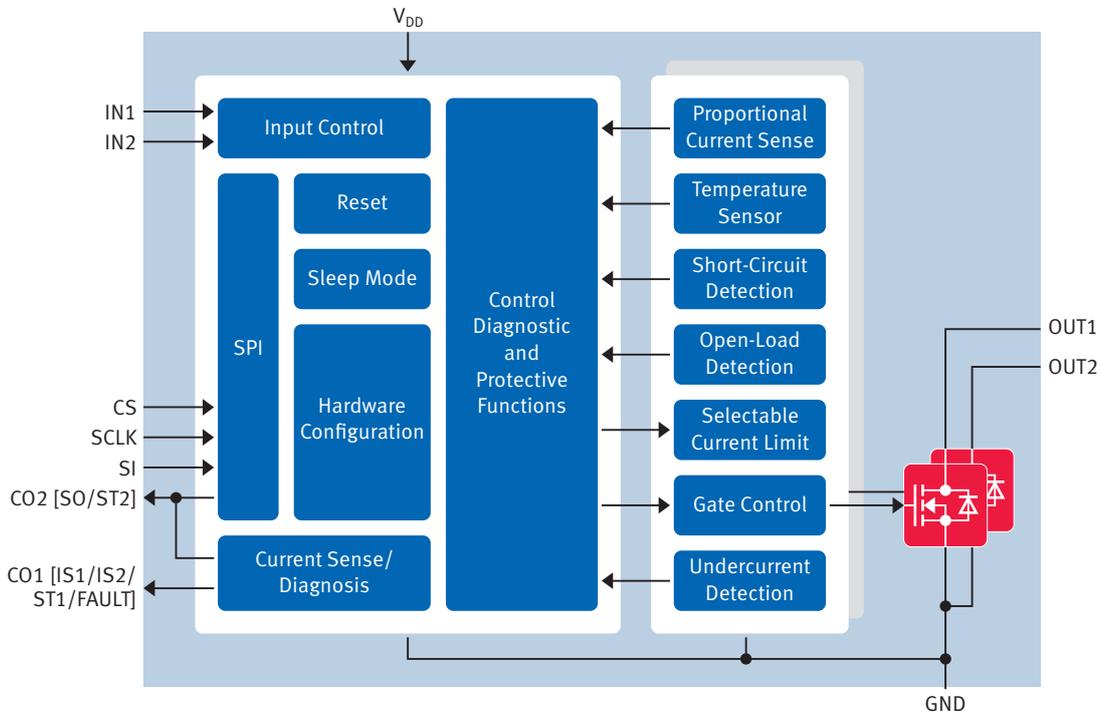

Features

- Overvoltage protection
 - Active clamping for inductive loads
- Undervoltage protection
 - Power-on reset
 - Undervoltage shutdown
- Overcurrent protection
 - Current limitation
 - Overcurrent switch-off
- Overtemperature protection
 - Thermal shutdown
- Electrostatic Discharge (ESD) protection
- Direct input control (for PWM)
- Communication interface (control/diagnosis)
 - Serial Peripheral Interface (SPI)
 - Micro Second Channel (MSC)
- 5V and 3.3V μ C compatibility
- Status flag
- 2-bit diagnosis feedback for:
 - Short-to-GND
 - Open-load
 - Short-to-battery
 - Normal operation

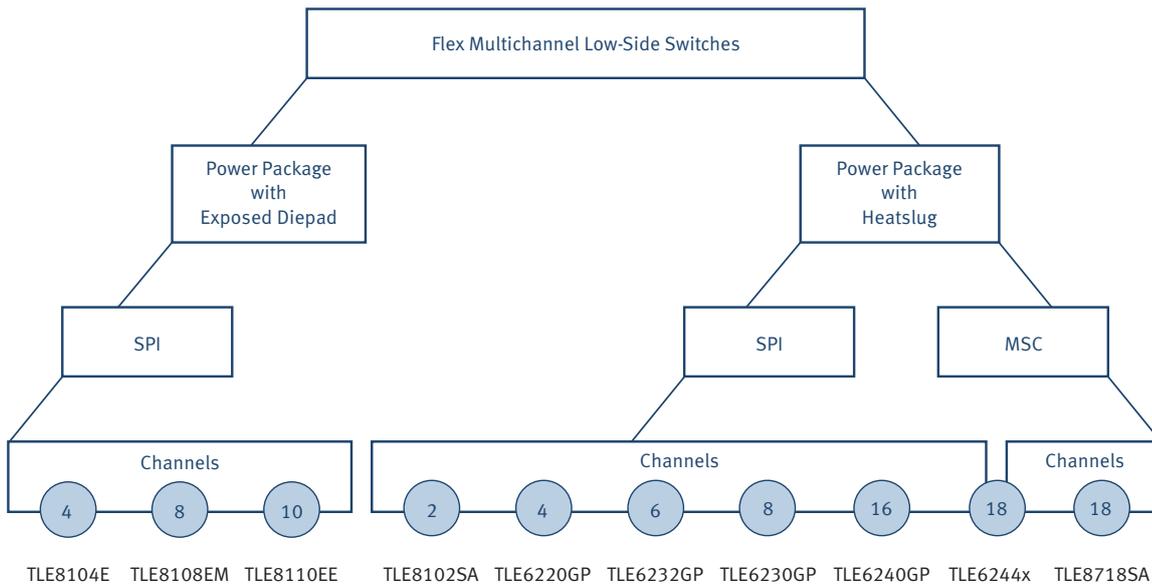

Benefits

- One family concept
- Designed for dedicated applications, but also available for off-the-shelf use as standard products
- Integrated self-protection and diagnosis
- Enhanced error detection for improved system reliability
- Control via standard SPI Bus or MicroSecond Channel (TLE6244X, TLE8718SA) or direct inputs
- Suitable for daisy-chain configuration to save I/O ports
- Support of safety-critical applications by overvoltage protection on all pins (TLE6244X, TLE8718SA)
- High quality ensured with automotive excellence program on Zero Defect strategy

PROFET™: Smart High-Side Switches

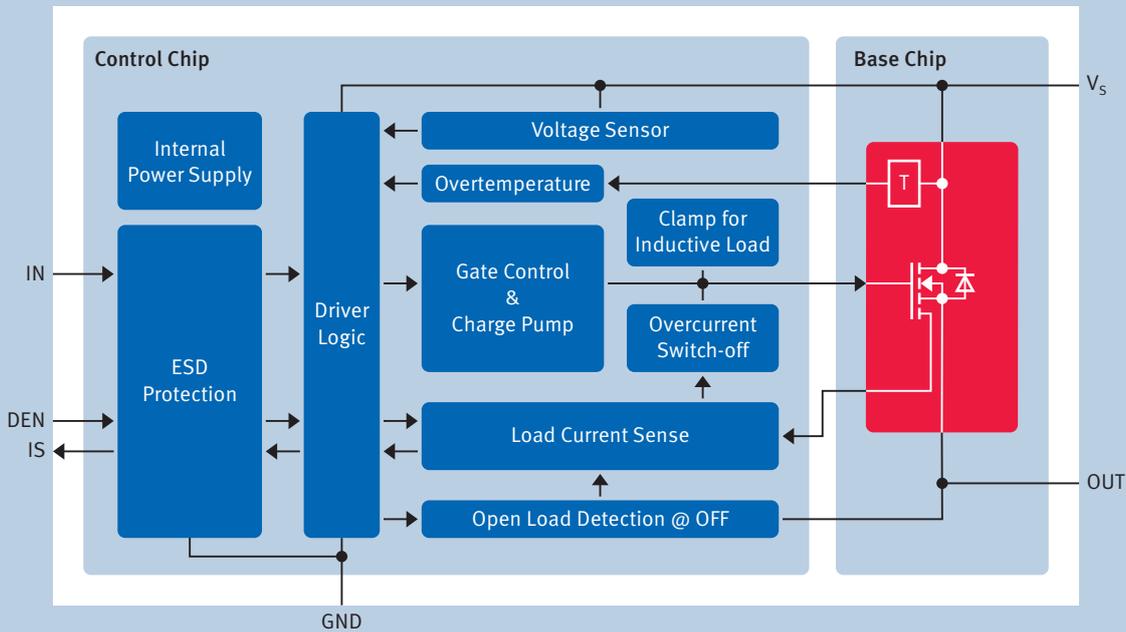

The highly integrated PROFET™ family (PROtected FET) incorporates a broad range of smart features, like diagnosis and protection. PROFET™ intelligent power switches consist of DMOS power transistor and CMOS logic circuitry for complete built-in protection.

The PROFET™ family offers protection against overload, overvoltage, short-circuit, excessive temperature, ground loss, power supply loss and Electrostatic Discharge (ESD). The PROFET™ family products are also capable of protecting against dynamic overvoltage such as load dump and inductive load turn-off. For the benefits and the functionality of the protection features, please refer to www.infineon.com/profet.

The PROFET™ diagnostics offer the choice of either status or current sense features, or a combination of both. In the event of a malfunction, the status feature is able to diagnose overtemperature or open-load. The PROFET™ diagnostic features also provide the user with precise information about switch and load. Diagnostic feedback and load current sensing minimize risks by eliminating the need for additional discrete circuitry and assembly.

This vast range of smart features makes the PROFET™ ideal for a variety of automotive (12V), trucks & agriculture (24V) and industrial applications.

Block Diagram BTS500x0-1EGA

Application Examples

- Lighting
- Heating
- Power distribution
- Motor control

Application Ranges

- Automotive (12V)
- Transportation (24V)
- Industrial

Load

- Capacitive like lamps and glow plugs
- Resistive like PTC
- Inductive like solenoids
- Electronic like ECU

Basic Features

- High-side switches (0.5 ... 45A load current)
- RoHS compliant & AEC qualified
- Very low stand-by current
- ESD protection, optimized EMC
- PWM capability
- Very low power DMOS leakage current in OFF
- 3.3V and 5V compatible logic inputs

Protection Features

- Load dump
- Current limitation
- Thermal shutdown with restart
- Loss of ground/battery protection
- Stable behavior at undervoltage
- Overvoltage protection (ext. components)
- Voltage dependent current limitation
- Reverse polarity compliant (ext. components)

Diagnostic Features

- Proportional load current sense
- Open-load in ON- and OFF-State
- Short-circuit to battery and ground
- Overtemperature sense

PROFET™: Smart High-Side Switches

No Diagnosis

Basic Features

- 12V or 24V capable

Protection Features

- Current limitation
- Thermal shutdown

- Restart
- Loss of inductive load

SPI Power Controller (SPOC)

SPOC devices are high-side smart power Multichannel switches providing embedded protective functions and diagnosis. They are specially designed for standard exterior lighting and LED equivalent loads in automotive applications, but can be used for further automotive and industrial applications such as heating, motor driving or power distribution.

The unique selling point of the SPOC is the pin, function and package compatibility within a SPOC family and the ability to drive a bulb or LED with the same device (except SPOC-DUO family), enabling customers to develop a modular and scalable platform with only one PCB.

Configuration and diagnosis are carried out via SPI. Additionally, there is a current sense signal available for each channel that is routed via a multiplexer to one diagnostic pin.

Block Diagram (SPOC+ Example)

Basic Features

- Serial Peripheral Interface (SPI) (daisy-chain capable) for control and diagnosis
- CMOS-compatible parallel input pins provide straightforward PWM operation and FailSafe
- Very low stand-by current
- Optimized electromagnetic compatibility
- Suitable for bulbs as well as LEDs

Protective Functions

- Reverse battery protection
- Short-circuit and overload protection
- Multistep current or tripping (SPOC FL)
- Selectable current tripping (SPOC DUO)
- Thermal shutdown with latch
- Overvoltage protection
- Reverse polarity protection (SPOC DUO and SPOC FL)
- Loss of ground protection

Diagnosis Functions

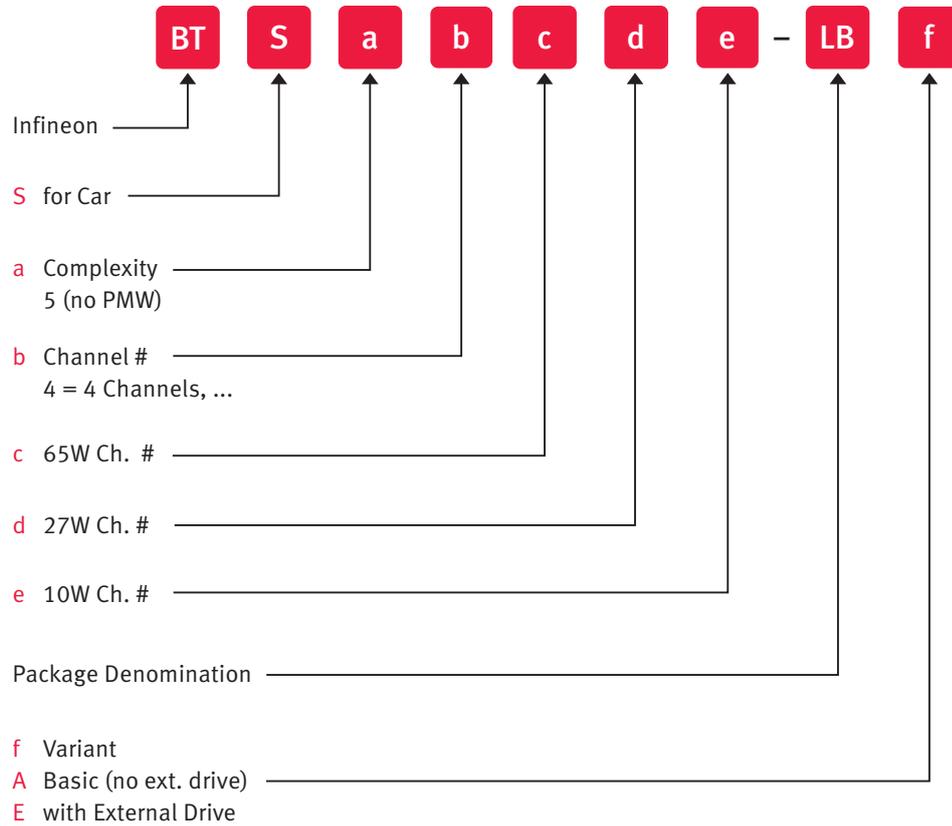

- Multiplexed proportional load current sense signals
- High accuracy of current sense signal at wide load current range
- Latching feedback on overtemperature and overload via SPI
- Diagnosis PWM with small duty cycle possible
- LED mode (not for SPOC DUO)
- Fail-safe activation via LHI pin and configuration via input pins

Options

- **LED mode (SPOC+, SPOC FL):** Load type configuration between bulbs and LEDs for products featuring the LED mode option (current sense ratio configurable, very fast diagnosis in LED mode)
- **Adjustable slew rate (SPOC DUO):** allows customers to optimize switching losses and electromagnetic compatibility performance for the design
- **PWM engine (SPOC FL):** autonomous PWM generator to reduce micro controller loading
- **External drive capability (SPOC+, SPOC FL):** ability to control one or two smart power drivers to reduce the I/O usage of the micro controller

SPI Power Controller (SPOC) for Advanced Light Control

Infineon® Auto LED Drivers

Infineon® Auto LED Drivers are the best solutions to benefit from the advantages of LEDs providing full protection to your lighting application in automotive. A constant current regulation is the enabler for stable brightness over the whole automotive temperature and voltage range.

The driver will protect itself against overstress and the LED is as well protected against overstress caused by e.g. voltage spikes or overtemperature. Additionally derivatives out of the Infineon Auto LED Driver Family provide diagnostic functionality of open and shorted LED as well.

All these features are required to drive LEDs inside a car with harsh automotive conditions.

Glossary

Features

- Constant output current, therefore constant brightness and extended LED lifetime
- Wide input voltage range
- Low drop voltage
- Open-load detection
- Overtemperature protection
- Short-circuit proof
- Reverse polarity proof
- Wide temperature range
- Very small SMD packages

Infineon® Auto LED drivers are divided in four sub-families

Linear LED driver of BCR400 series

- The most cost effective solutions to drive low power LED

Infineon® Basic LED Driver

- Linear current sources for low to medium power applications

Infineon® Power LED Driver

- DC/DC converter & controller for high power applications

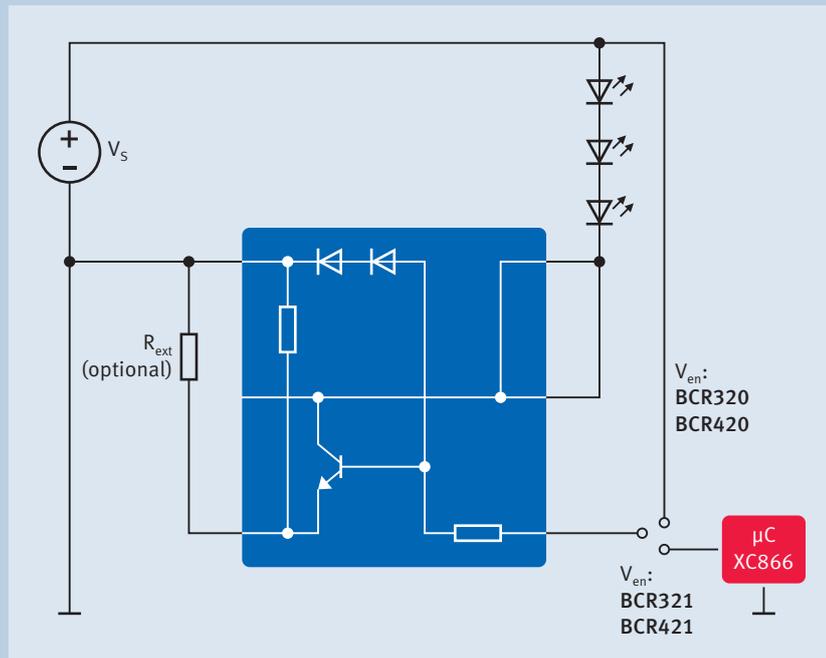

Infineon® LIN LED Driver

- LIN controlled LED driver for multicolor ambient lighting

Linear LED Driver of BCR400 Series

The most cost effective solution to drive small LEDs with accurate current source.

Infineon® Basic LED Driver

Linear Current Sources for Low to Medium Power Applications

LED drivers designed to supply constant current up to 500mA, which enables constant LED brightness and ensures extended LED lifetime, independently from supply voltage or LED forward voltage class.

Infineon® LIN LED Driver

LIN Controlled LED Driver for Multicolor Ambient Lighting

The Infineon® LIN LED Driver family is the enabler for multicolor and especially for the challenging RGB (Red-Green-Blue) Ambient Lighting. The device family members combine logic, memory, LIN interface and a three channel linear current source in one device. By using the integrated memory to store calibration points of the used LED a stable color point can be achieved. The integrated memory is big enough to store up to 16 color points. Additionally a smart color theater dimming and color transitioning is already integrated in the device to allow smooth color changes and up- and down dimming.

Infineon® Power LED Driver

DC/DC Converter & Controller for High Power Applications

Increasingly, LED lighting solutions are used in the front area of the car, especially in the Premium segment. LED Frontlight solutions are usually implemented using several discrete LEDs in one chain which leads to a string voltage of up to 60V or using less LEDs with high forward current up to 1.5A. Both implementations are requiring DC/DC solutions either boost, buck or buck-boost architectures are needed. The Infineon® Power LED Driver Family consists of DC/DC devices which are perfectly fulfilling these requirements.

Motor Drivers The Right Driver for Every Motor

The search for a solution to drive applications powered by low-voltage motors ends with Infineon. From 0.1 to 100A, and from steppers to 3-Phase drivers, we offer the right solution for every current range and application requirement.

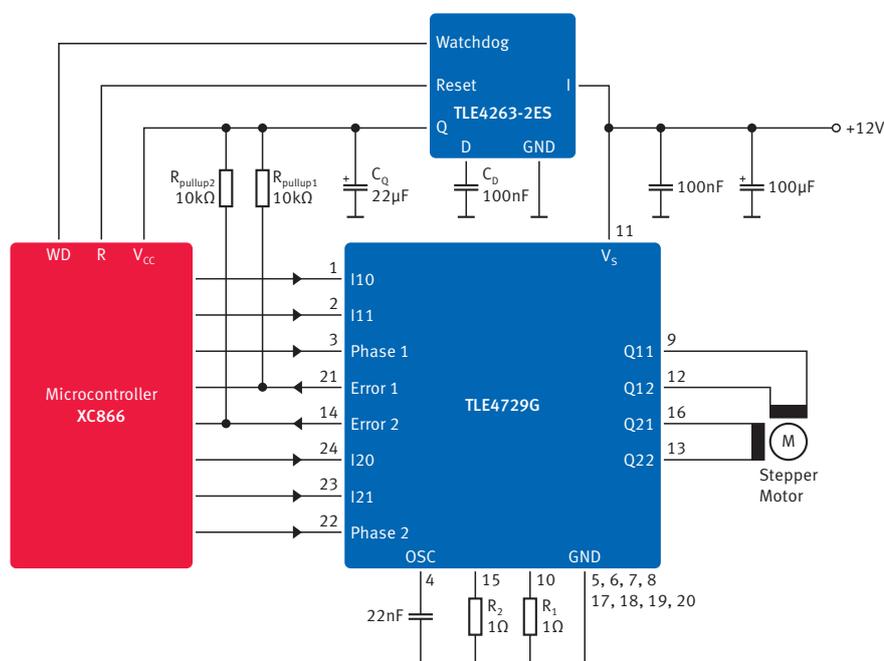

Integrated Smart Power Motor Drivers

The Infineon low-current DC motor bridge family consists of a broad variety of bridges for stepper and DC brush motors including servo motors. They are designed for use in automotive and industrial applications. Typical applications are light leveling, HVAC flap control, and mirror adjustment.

The products are offered with protection features as well as diagnosis. Depending on the product type the protection ranges from basic protection against overtemperature to a full set of protection against open-load, overvoltage, undervoltage, overtemperature and short-circuit. The diagnosis capabilities range from a simple status flag to communication via a 16-bit SPI.

Stepper Motor Drivers

The TCA3727 and TLE4726 et seqq. cover a broad range of applications from automotive to industry. The TLE4726 can be used in 24V applications. All types are produced in DOPL, Infineon's robust bipolar technology.

Product Type	$I_{L(NOM)}$	$I_{L(lim)}$	I_q [μA]	$V_{S(op)}$	Step Operations	Protection	Diagnostic interface	Highlights	Package ¹⁾

Motor Control ICs

The TLE4207, TLE4208, TLE6208-3/-6 are multipurpose bridges designed to drive DC brush motors with nominal load currents < 1A for automotive and industrial applications. The TLE4207 and TLE4208 parts are built using Infineon's robust bipolar technology DOPL. TLE6208-3/-6 and TLE84xxx use SPT, a technology combining bipolar, CMOS and DMOS cells.

Integrated Smart Power Motor Drivers

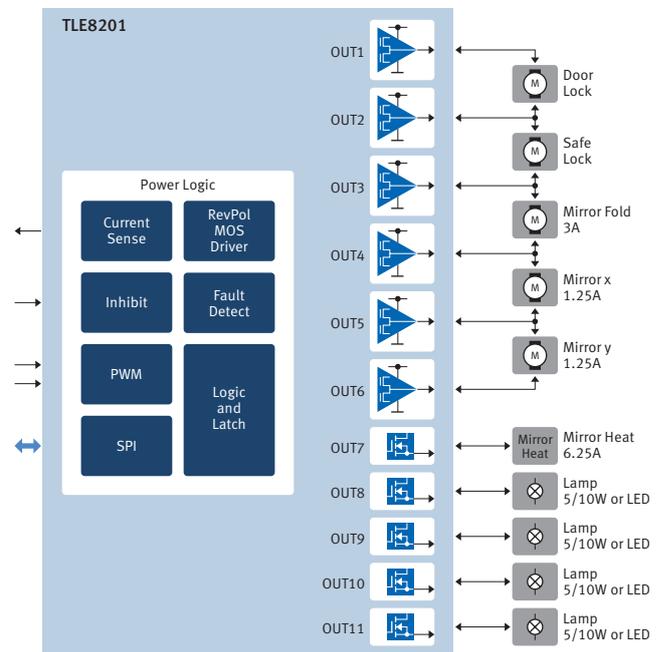

Door Module ICs

The TLE8201R is an ASSP for door-module applications. It includes those power stages necessary to drive the following loads in a typical front door: Central lock, mirror fold, mirror position, mirror defrost plus 5 and 10W lamps. It is designed as a monolithic circuit in a SPT technology which combines bipolar and CMOS control circuit with DMOS power devices.

The TLE8203E is a derivative of the TLE8201R for automotive mirror control applications. The following output stages are included in this monolithic device, mirror position, mirror defrost and one lamp driver for 5 or 10W.

Standard Features

- SPI Interface
- $I_Q = 3\mu\text{A}$
- Operating Range: 8–20VS

Product Type	Outputs	$I_{L(lim)}$	$R_{DS(on)}$	Driver Stage	Operating Range [VS]	Protect	Diagnosis	Target Load	Package ¹⁾

Integrated High-Current Motor Drivers

NovalithIC™/Trilith IC

A NovalithIC™ provides a complete low-ohmic-protected half-bridge in a single package. It can be combined with an additional NovalithIC™ to create an H-bridge or 3-phase bridge as well. The NovalithIC™ family has the capability to switch to up to 25kHz while providing overcurrent, overvoltage and overtemperature protection. Current sense is optionally available to monitor load current. The NovalithIC™ family offers cost-optimized solutions for protected high-current PWM motor drives with very low board-space consumption—scaled to your needs.

The Trilith IC family members combine two high-side and two low-side switches in one package. They are geared to driving high-current DC motors in an H-bridge configuration but can also be used as single independent switches. All Trilith ICs include overcurrent and overtemperature protection for the high-side switches. For the low-side switches the user can choose between unprotected switches as well as protected switches.

Gate Driver ICs for External MOSFETs

The trend towards greater efficiency in automotive applications also applies to electric motors. Applications such as power steering, HVAC compressors and engine cooling fans will be controlled by electronic motors in the future. Infineon's family of configurable, H-bridge and 3-phase gate driver ICs can be combined with MOSFETs to provide the power and efficiency these systems demand.

Applications

- Power steering
- Fan and pump control
- Starter alternator
- Seat belt pretensioner
- VVT
- Electric park brake
- ECMT

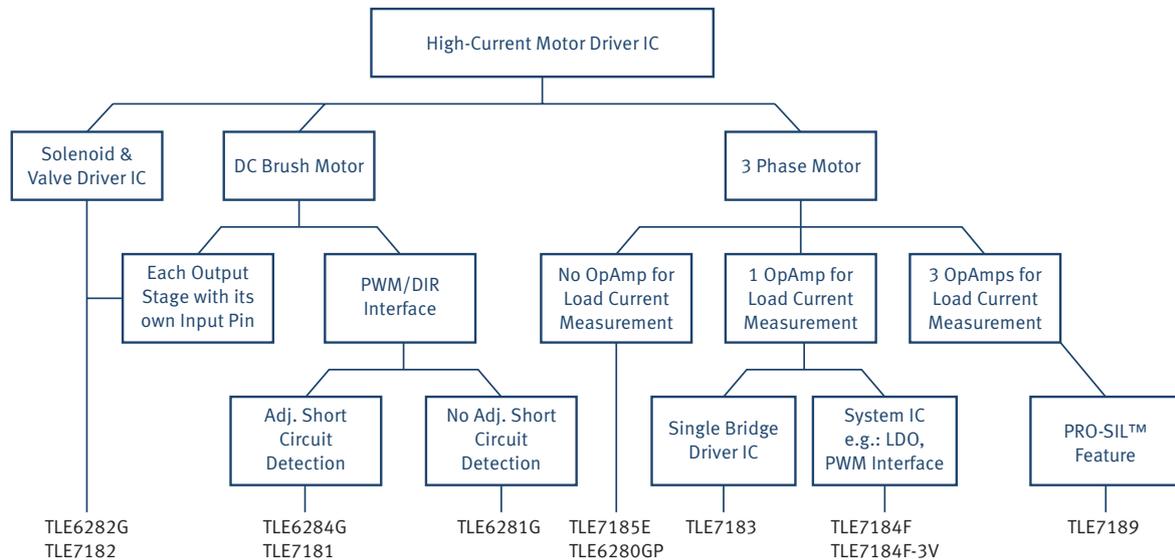

Basic Features

- Strong output stage up to 1.5A
- Precise OpAmp for current shut monitoring
- Operation down to 5.5V
- Duty cycle adjustable up to 100%

Diagnostic Features

- Undervoltage
- Short-circuit
- Overtemperature
- Overvoltage

Linear Voltage Regulators: Voltage Regulators and Trackers and DC/DC Converters

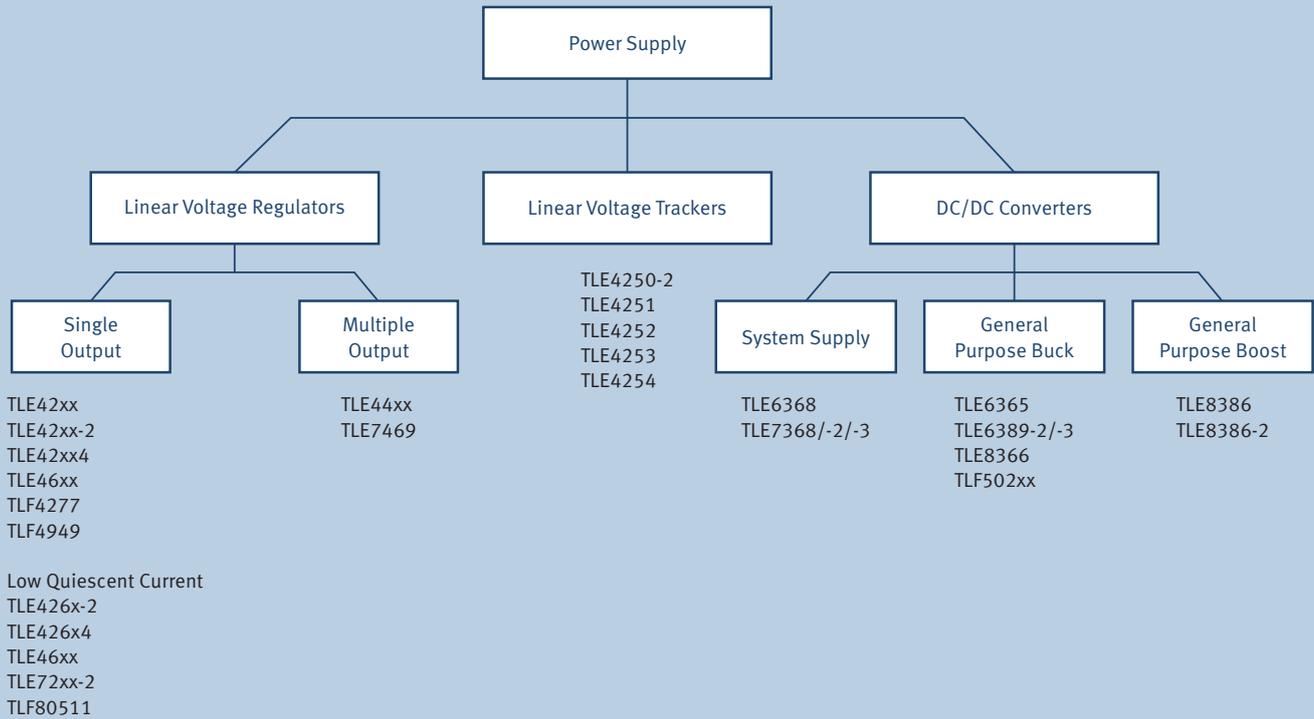

Infineon Technologies offers a comprehensive portfolio of linear voltage regulators and voltage trackers fitting a broad range of automotive applications. We are the global market leader with over 15 years of experience in the automotive regulator segment. We are continuously expanding our portfolio to meet our customers' present and future application requirements.

Our devices are especially designed for use in harsh automotive environments and are offered in the highest quality level. Our robust design approach ensures delamination-free ICs and long-term reliability.

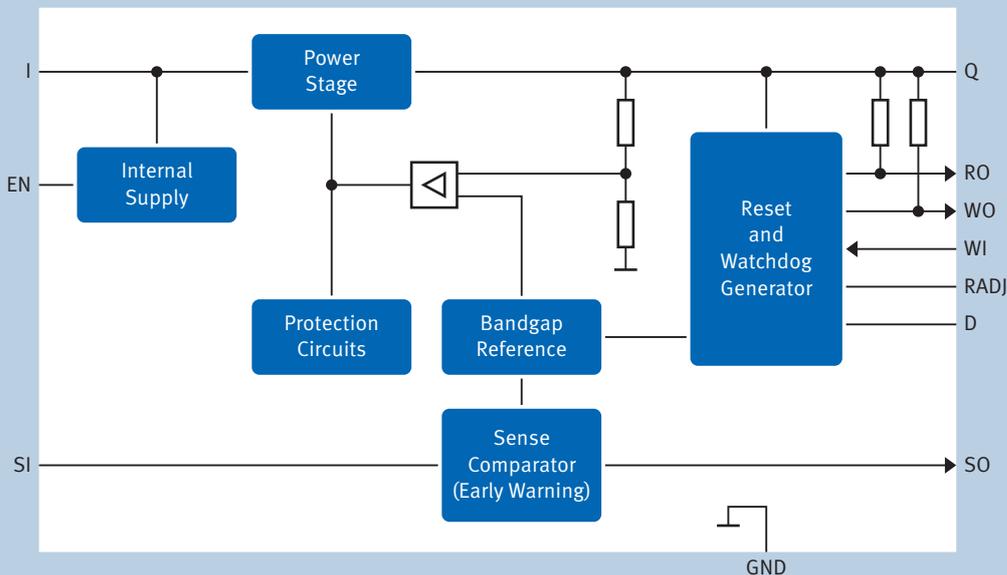

Basic Features

- Wide operation range: Up to 45V
- Very low dropout
- Wide temperature range: -40°C up to +150°C
- Short-circuit protection
- Reverse polarity protection
- Overtemperature protection
- Overload protection

Infineon's Power Supplies Address a Broad Range of Applications

Block Diagram Single Linear Voltage Regulators

Additional Features

- Low quiescent current consumption in stand-by mode
- Enable function for main output
- Adjustable reset threshold
- Standard and window watchdog
- Power-on reset circuit sensing the stand-by voltage
- Early warning comparator for supply undervoltage

Linear Voltage Regulators: Voltage Regulators and Trackers

DC/DC Converters

Infineon Technologies offers standard switching converters and several switching converters serving applications with extended requirements like supply for 32-bit microcontrollers and airbag applications. In our portfolio you can find step-up (Boost) and step-down (Buck) converters as well as converters cascaded internally with linear regulators and trackers.

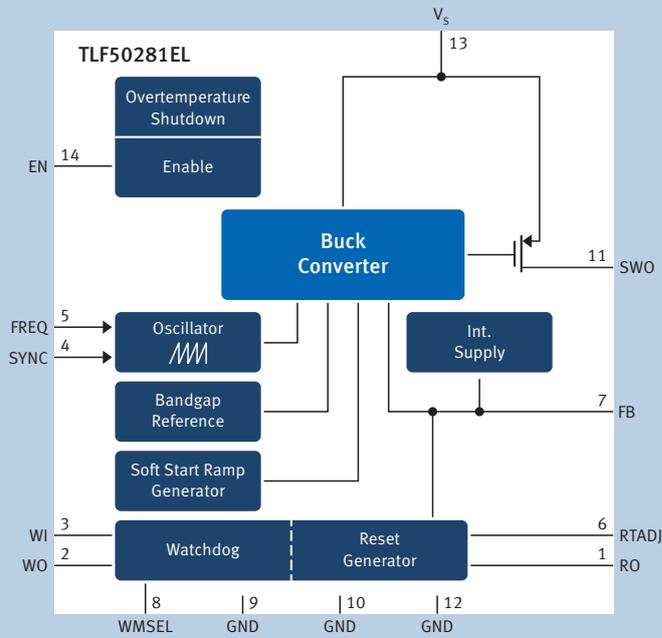

Features

- Step-up and step-down converters
- High-efficiency regulators
- Wide supply voltage operation range
- Very low current consumption operation
- Suitable for standard 12V/24V PowerNets
- Output undervoltage reset with delay
- Overtemperature shutdown
- Wide ambient operation range
-40°C up to +125°C
- Short-circuit protection
- Overtemperature protection

Automotive Transceivers

Because of the ever-increasing demand for information exchange in modern vehicles, the automotive industry implemented in vehicle networks (IVN) using the CAN (Controller Area Network), LIN (Local Interconnect Network) and FlexRay protocol-based bus systems.

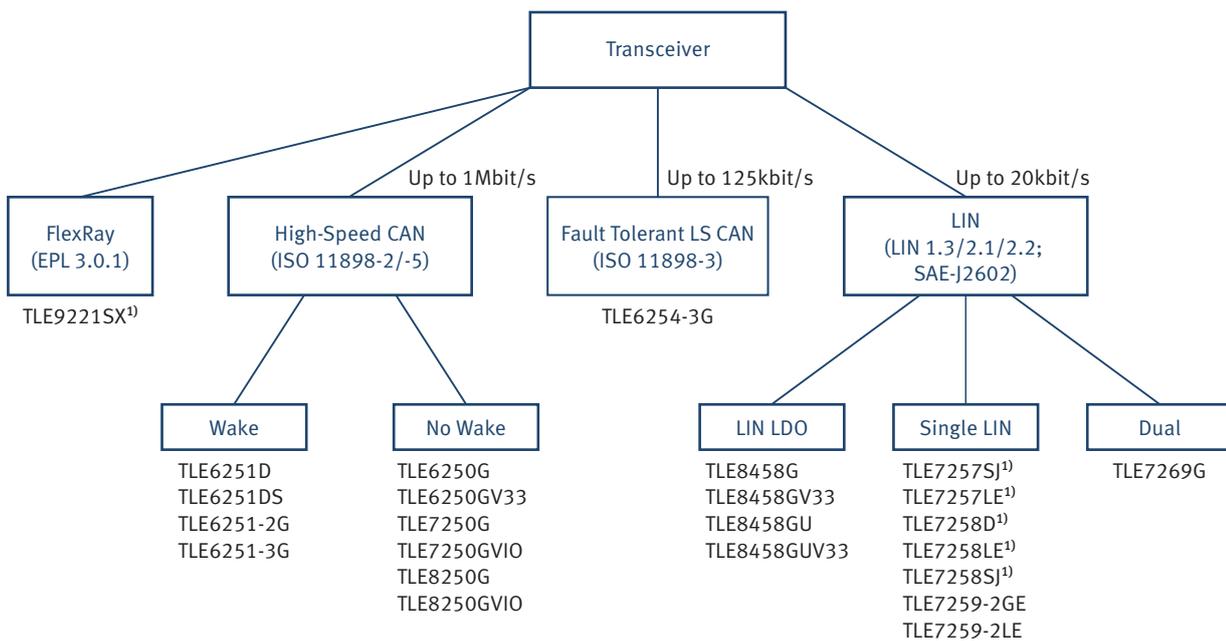

Transceivers are the link between the protocol unit (the controller) and the physical transmission medium (bus cable). In addition to their driving function (reception/transmission of signals from the bus to ECU) the transceivers also provide a wide range of protective and fault-diagnosis functions.

Features

- Excellent EMC
- Outstanding ESD robustness
- Highest quality standard
- Family concept
- Broad product portfolio

System Basis Chips (SBCs)

The latest generations of Infineon System Basis Chips (SBC) are monolithic integrated circuits in an enhanced power package. The TLE826x family provides a pin and software compatible solution with different numbers of LIN transceiver and Limp Home outputs. In addition the TLE7263E provides input monitoring with cyclic sense feature.

The devices are designed for automotive applications using CAN and LIN communication e.g. body controller, gateway applications, HVAC.

The SBC provide HS-CAN transceiver and LIN transceivers, multiple low dropout voltage regulators (LDO) for 5V supply, and a 16-bit SPI to control and monitor the device. Also implemented are a configurable Watchdog, Limp Home outputs, and configurable undervoltage detections.

The devices offer low power modes in order to support applications that are connected permanently to the battery.

The devices are designed to withstand the severe conditions of automotive applications, especially the ESD and EMC requirements of the OEMs.

Features

- Family concept
- Fully ESD protected
- Excellent EMC performance
- Very low quiescent current
- Supervision/FailSafe management
- “Bus Wake-up capability”

Applications

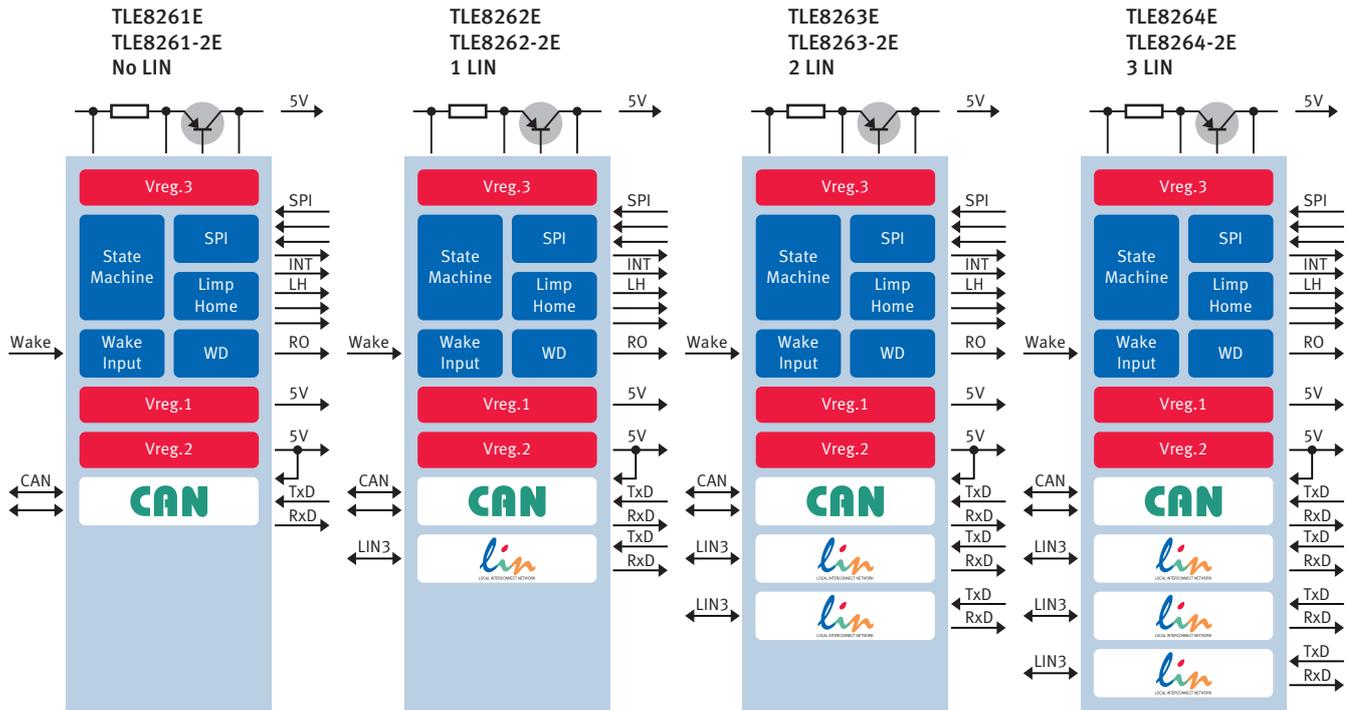

- HVAC
- BCM/Gateway
- Door module
- Lighting module
- Seat module

Powertrain System ICs

Gasoline Direct Injection

The TLE6270R is tailored for solenoid based Gasoline Direct Injection (GDI-)systems in automotive applications. The device controls external high-side transistors. The injector voltage can be varied in the range from battery voltage (for pre-charge and hold phases) up to 80V (for peak phase), resulting in fast opening of the injectors. With programmable current levels and peak time, the TLE6270R provides a high flexibility for the adjustment of peak-and-hold current waveforms for four injector channels.

Application Example TLE6270R

Features

- Four integrated low-side switches, control logic and outputs for external high-side switches
- Programmable peak and hold output current control to adapt to application requirements.
- Detailed diagnostic of defective or missing injector connections
- Serial Peripheral Interface (SPI) for diagnostics and control of the device
- Short-circuit, ESD and overtemperature protection
- Undervoltage reset

Constant Current Control ICs

Infineon's solution for variable force or constant current controlled solenoids typically used in automatic transmissions, idle speed-/valve-/suspension control or Exhaust Gas Recirculation (EGR) applications

Block Diagram TLE8242L

Features

- Shorted load detection
- Open-load detection in ON-/OFF-State
- Short to ground detection
- Max. output average current approx. 1.2A

Powertrain H-Bridges for Electronic Throttle Controls

Infineon H-bridge portfolio addresses the broad range of DC brush motor applications. Designed and optimized for Electronic Throttle Control (ETC), in addition the H-bridges can be used for Exhaust Gas Recirculation (EGR), valve control, idle control swirl and tumble flaps variable intake, manifold turbo charger waste gate, variable turbo geometry, but also industrial DC-brush motor applications.

Flex Multichannel Low-Side Switches (Powertrain & Safety)

Multi channel low-side switches are designed for multi purpose loads (solenoids, relays and resistive loads). The so-called Flex products serve in a flexible way the engine requirements with a different number of low-side drivers.

Please refer to page 38 for the product table.

Airbag System ICs

Infineon, a world leading supplier of Airbag ICs with more than 15 years experience, offers several complete solutions, enabling cost efficiency over the entire range from basic up to high end airbag systems. With a product portfolio ranging from high content integrated System ICs, over Smart Firing ICs and Power Supplies to Satellite Receiver ICs, Infineon is well positioned to meet the market's requirements for cost efficiency, high quality and flexibility.

Features

- 16-bit Serial Peripheral Interface (SPI)
- Squib diagnosis via resistance measurement

Airbag Firing ICs

Product Type	Channels	Warning Lamp Output Driver	Digital Output for Firing Current Detection	3.3V compatible I/O	Buckle Switch Detection	Number of Analog Output for Signal Monitoring	Firing Loop Enable Inputs	Firing Current (max)	Programmable Deployment Firing Timer	Buck/Boost	Package ¹⁾

Infineon® Embedded Power ICs

The latest generation of Infineon® Embedded Power ICs integrates on a single die all the necessary functions to sense, control and actuate a motor. The TLE983x product family integrates a high performance 8-bit microcontroller derived from the established XC800 microcontroller family with application specific power drivers, control and communication modules in an automotive qualified new Smart-Power Technology.

TLE983x product family improves the microcontroller performance and the product feature set over the existing first generation (TLE78xx) product offering.

The TLE983x product family is offered in a space saving VQFN-48 package, while the first product generation is realized as a Multi-Chip-Module (MCM) in a DSO-28 package.

The devices are designed for LIN based motor control applications such as window lifts, wipers, sun roofs, power seats, fan/blower control.

General Characteristics

- Operating voltage V_{Bat} : 3.0V to 27V, maximum rating 40V
- Stop mode 80µA & sleep mode 25µA
- ESD performance :
 - up to 2kV/handling on all pins
 - 4kV @ HV inputs
 - 6kV @ LIN pin
 - ECU/car handling ruggedness (Gun Model for pins directly connected to ECU plug/socket)
- Overvoltage device clamp (load dump ruggedness): $\geq 40V$
- Wide operating temperature range:
 $T_j = -40 \dots +150^\circ C$

Features of 8-bit Microcontroller, XC8xx

- 8051 compatible, up 40MHz frequency
- 256Byte RAM and 3072Byte XRAM
- 36KB to 64KB Flash memory for code and data
- 10-bit ADC (5V max.), 8 channels including battery and supply supervision
- Five 16-bit timers
- Capture/compare unit for PWM signal generation (CCU6) with 2 x 16-bits timers

TLE983x Product Family Offers

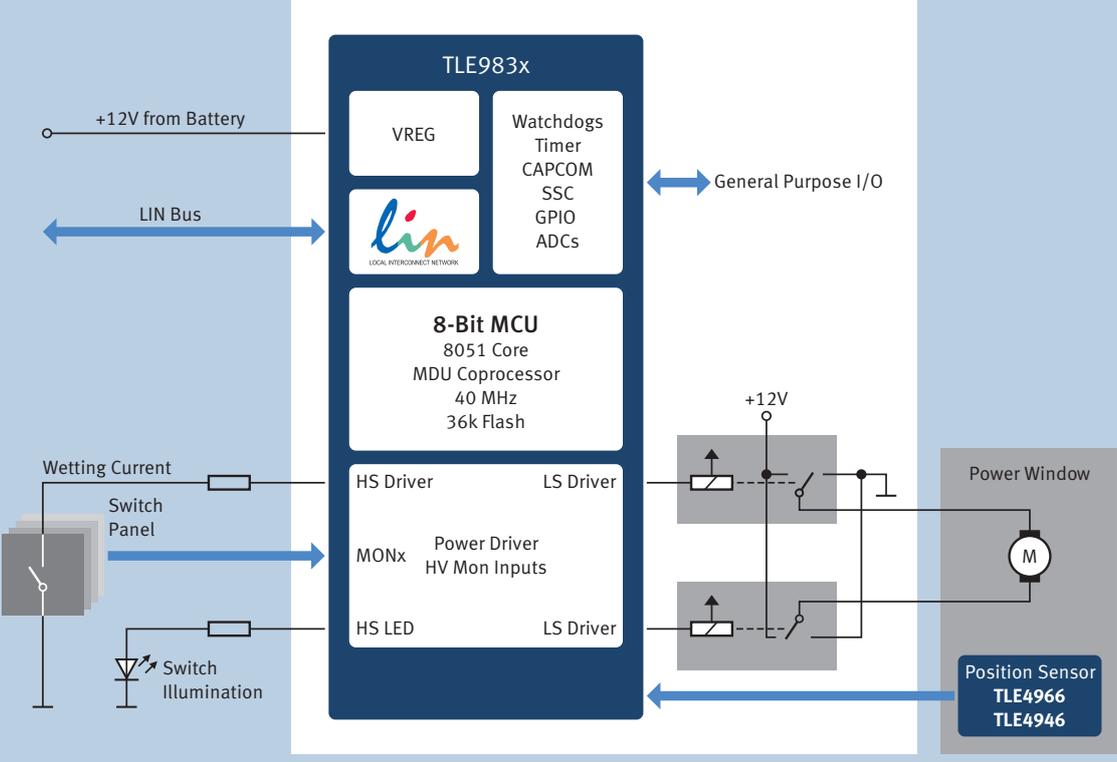

- LIN transceiver (single wire), compliant with LIN Spec. 2.1, 2.0/SAE J2602 and compatible with LIN 1.3
- Two protected low-side drivers (250mA)
- Up to two protected high-side switch drivers (150mA)
- Five high-voltage inputs with wake up functionality
- Two watchdog timers
- Programmable window watchdog
- Measurement unit with 10 channels, 8-bit A/D converter and data post processing
- Voltage regulator with undervoltage reset
- Power saving modes
 - MCU slow-down mode
 - Stop mode
 - Sleep mode
 - Cyclic wake-up and cyclic sense during stop mode and sleep mode

Applications

- Window lift
- Sun roof
- Fan control
- Seat control
- Key pad interface
- Switch panel interface

Infineon's Next Level of Zero Defect Program – On the Way to Zero Defect Products and Services

The most valuable aspect of cars is the people they carry. Therefore, safety should never be compromised. This is the most important consideration for everybody involved in making automobiles – from the smallest suppliers to the manufacturers themselves. As car components become more and more complex, and as the number of control units in vehicles increases, the likelihood of a product failure becomes greater. Quality performance is a key differentiator for automotive market success.

Our target of Zero Defect means:

- No quality events
- Defect-free product launches
- Automotive product quality of zero failed parts per million
- Low non-conformance costs
- Highest quality image in the market
- More business due to satisfied customers

No compromise when it comes to quality

Infineon established the most comprehensive quality program called “AUTOMOTIVE EXCELLENCE” in the semiconductor industry in 2003. The continuation of the successful “Automotive Excellence” program is “NEXT LEVEL of ZERO DEFECT”. The Program is founded on four pillars: people, products, processes and production. Due to our “no compromise” policy in all four pillars our program really works. Our employees truly live the credos of Zero Defect, considering the highest quality requirements and understanding the importance of prevention. They are trained to deeply understand the tools and methods used to avoid deviations and to solve problems by addressing both technical and systemic root causes.

On the way to zero defect products

On the way to zero defect products, some examples:

- BEAR (BackEnd Automation Roadmap) project reduces manual handling
- “Top5 Defects Reduction in Backend” deeply addresses technical and systemic root causes
- Quality Firewall: Subproject “Highest outgoing product quality by intelligent outlier screening”
- Extend “Next Level of Zero Defect” into supplier base

“Next Level of Zero Defect” is your competitive advantage

Many of our partners have expressed their satisfaction with the quality of our products and the way we execute “Next Level of Zero Defect”.

- “Honor Quality Award Toyota Hirose” received in 2010 for zero defect quality for last four years.
Infineon is the First non- Japanese company that received this honour in this highest level category.
- 7 quality awards in 2004, 2006, 2007, 2008, 2009, 2010 and 2011 from Toyota’s Hirose plant
- “Supplier Performance Award” for the year 2008 and “Automotive Supplier of the Year 2009, 2010 and 2011” from Continental
- “Excellent Supplier Award 2008” from Hitachi Cable Japan

ATTENTION PLEASE!

The information given in this document shall in no event be regarded as a guarantee of conditions or characteristics ("Beschaffenheitsgarantie"). With respect to any examples or hints given herein, any typical values stated herein and/or any information regarding the application of the device, Infineon Technologies hereby disclaims any and all warranties and liabilities of any kind, including without limitation warranties of non-infringement of intellectual property rights of any third party.

INFORMATION

For further information on technology, delivery terms and conditions and prices please contact your nearest Infineon Technologies Office (www.infineon.com).

WARNINGS

Due to technical requirements components may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies Office. Infineon Technologies Components may only be used in life-support devices or systems with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system, or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body, or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.
