## THE HISTORY OF IRWIN TOOLS

IRWIN Tools has a long and storied history, stretching for more than a century and set against the backdrop of a young, ambitious nation. In 1885, Charles Irwin patented the Auger bit and, along with four business partners, formed the IRWIN Auger Bit Company. In 1924, William Petersen, a Danish immigrant, invented and patented VISE-GRIP locking pliers. Through innovation and a series of acquisitions, these two companies have now become IRWIN Tools.

IRWIN Tools manufactures and distributes a broad line of professional-grade hand tools and power tool accessories worldwide for trade professionals who demand superior performance and durability on the job. The IRWIN Tools brand portfolio features user-preferred category leaders such as VISE-GRIP® locking tools, MARATHON® circular saw blades, QUICK-GRIP® clamping tools, SPEEDBOR® wood drilling bits, STRAIT-LINE® marking tools, UNIBIT® step drill bits and HANSON® taps and dies.

## ULTIMATE TRADESMAN CHALLENGE

IRWIN Tools is searching for the Ultimate Tradesman. The tradesman who can **GRIP IT**, **RIP IT**, and **DRIVE IT** faster than any other tradesman out there, will be the next IRWIN Tools Ultimate Tradesman.

IRWIN has always been passionate about tradesmen. Every tool we make starts with the tradesman in mind. We focus intently on delivering products that help the professional tradesman do his/her job better/faster/easier. The Ultimate Tradesman Challenge celebrates professional tradesmen.

The Ultimate Tradesman Challenge has been revamped for the new competition season beginning in 2010. It's all about gripping, ripping, and driving. Tools used include 10" IRWIN VISE-GRIP® GrooveLock pliers, an IRWIN QUICK-GRIP® XP600® one-handed bar clamp, the brand new IRWIN Universal Handsaw, and an IRWIN SPEEDBOR® Max Speed wood drilling bit. Speed; ability to remove pipe fittings; ability to clamp work securely; accurate marking; fast, straight cuts; and the ability to accurately drill two holes are crucial to winning the challenge.

Over 50 events will take place throughout North America, with 24 top times advancing to the North American Finals. All competitors at local events will win cool IRWIN gear, and the winner with the top time of the day will walk away with an IRWIN tool bag packed with IRWIN tools, plus genuine Cat footwear. The North American Champion will win a year's supply of Cat footwear and a custom IRWIN Tools Mustang GT Premium Pace Car – the official pace car of the 2010 IRWIN Tools Night Race at Bristol.

The North American Ultimate Tradesman will then advance to the World Finals in March of 2011, where six tradesmen from around the world will

compete to become the Worldwide IRWIN Tools Ultimate Tradesman. The tradesman with the top time will win the grand prize – a custom 2010 IRWIN Ultimate Tradesman Challenge trophy and a chance to win \$1 MILLION!

For more information, official rules, or to find an event near you, visit [www.irwin.com](http://www.irwin.com).

## The Choice of Professional Tradesmen Since 1924

The IRWIN® VISE-GRIP® brand is legendary. Professional tradesmen have trusted the strength and durability of VISE-GRIP pliers since 1924. With proven performance in every turn, these are the tools that tradesmen choose first – and pass on to the next generation.

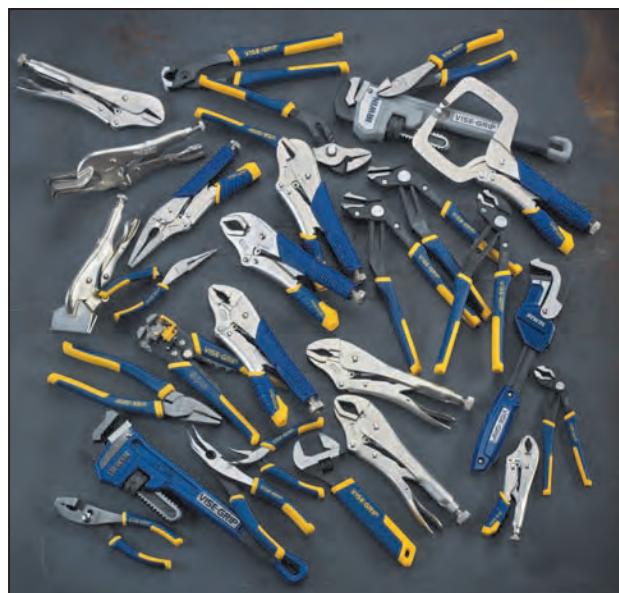

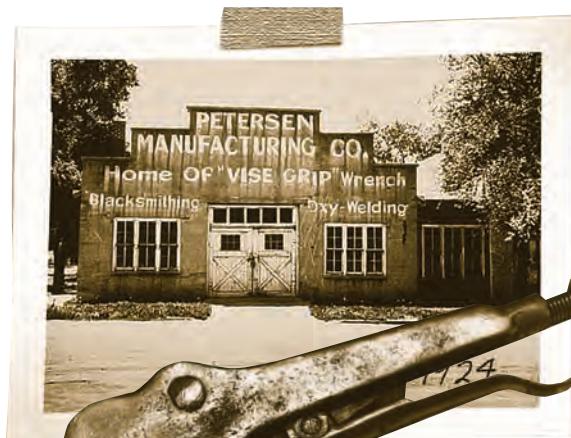

VISE-GRIP locking tools have twice the life of any other locking pliers on the market. The familiar VISE-GRIP Original™ locking tools, with the classic trigger release, continue to be a favorite. Our innovative VISE-GRIP Fast Release™ locking pliers have a one-handed, triggerless release, so they're twice as easy to open as the traditional design. Plus, anti-pinch, non-slip ProTouch™ Grips provide comfort, control, and less hand fatigue.

The newly re-engineered curved jaw (CR) locking pliers are the latest innovation in the VISE-GRIP family of locking tools. With a self-energizing lower jaw, these locking tools have three times more gripping power than traditional locking pliers, and will never slip or strip. There's no need for heavy input pressure – the jaws tighten to provide maximum grip as more torque is applied to the tool. The CR range is available in both Original and Fast Release.

VISE-GRIP GrooveLock pliers have a press-n-slide button that adjusts the jaw twice as fast as other groove joint pliers. Anti-pinch, non-slip ProTouch™ Grips provide comfort, control, and less hand fatigue. With precise jaw positioning and a multi-groove ratcheting system, GrooveLock pliers are now available in straight, smooth, and v-shaped jaws.

In addition to locking tools and groove joint pliers, VISE-GRIP offers a full line of pliers and wrenches, including traditional pliers, pipe wrenches, and specialty tools – all backed by the IRWIN VISE-GRIP Lifetime Guarantee.

IRWIN VISE-GRIP pliers and wrenches continue to set the standard for dependability, quality, and innovation... today and tomorrow. Wherever there's a need for a quality tool, IRWIN VISE-GRIP is on the job.

## QUICK-GRIP® XP600

The IRWIN® QUICK-GRIP XP600 (Extreme Pressure) is the most powerful one-handed bar clamp available. Its 600 lbs. of hold force make it ideal for heavy-duty applications like installation, demolition, and rough glue-up. The new adjustable foot allows XP600 to rest upright on the work surface for gluing – perfect for panels and cabinetry. In addition, the full face pads distribute pressure evenly. Remove the pads to activate the swivel jaw feature, which maintains full contact to combat flexing at extreme pressure, or conforms to irregular surfaces. The IRWIN QUICK-GRIP XP600 delivers maximum power, versatility and stability – it's what you would expect from the innovator in clamping.

### QUICK-GRIP XP600 FEATURES

1. Double locking swivel jaws maintain even contact – combats flexing even at extreme pressure. Removable pads to clamp irregular shapes, locks to parallel for standard clamping
2. 3-3/4" throat depth
3. Removable full face pads provide more surface area, even distribution of pressure and protect work surface
4. I-Beam bar supports added pressure, with less bend and flex. Heat-treated, black oxide carbon steel provides maximum durability
5. Patented Power Lock™ system holds more pressure longer
6. Adjustable foot sits upright for gluing
7. Quick Change™ screw allows for quick conversion to a spreader, affixed spring-loaded screw won't get lost

## QUICK-GRIP® SL300

Twenty years ago, IRWIN® QUICK-GRIP revolutionized clamping with the introduction of the one-handed bar clamp. QUICK-GRIP is now taking that convenience to the next level with the SL300 (Swivel Lock). This new clamp has an I-beam bar and delivers 300 lbs. of hold force. In addition, the locking swivel jaw conforms to irregular surfaces, maintains full contact to combat flexing, or easily locks to parallel for standard clamping. The SL300 also has a Quick Change™ screw to convert easily to a spreader. The QUICK-GRIP SL300 combines one-handed convenience with unparalleled performance – it's the new generation in one-handed bar clamps.

1. Locking swivel jaws maintain even contact – combats flexing even at extreme pressure. Removable pads to clamp irregular shapes, locks to parallel for standard clamping
2. 3-1/2" throat depth
3. Removable pads provide protect work surface
4. I-Beam bar supports added pressure, with less bend and flex. Heat-treated, black oxide carbon steel provides maximum durability
5. Quick Change™ screw allows for quick conversion to a spreader, eliminates rattles in end jaw, and affixed spring-loaded screw won't get lost

## Bevel Up Versus Bevel Down

The position of your chisel's bevel makes a big difference in the results you will achieve. When you use a chisel with the bevel up, the result is removal of larger chips. With the bevel down, a chisel offers you more control. The blade tends to work itself out of the wood grain, removing small shavings instead of large chips.

## Marking Chalk

### STRAIT-LINE® Marking Chalk

#### Keep The Chalk Where You Want It

IRWIN® STRAIT-LINE® marking chalks have a newly engineered flip-top cap that keeps the chalk in the bottle where you want it and stops it from spilling out in areas that you don't. The flip-top cap, available on all IRWIN STRAIT-LINE chalk bottles, seals the chalk in an airtight chamber, keeping out moisture and reducing the risk of clumping.

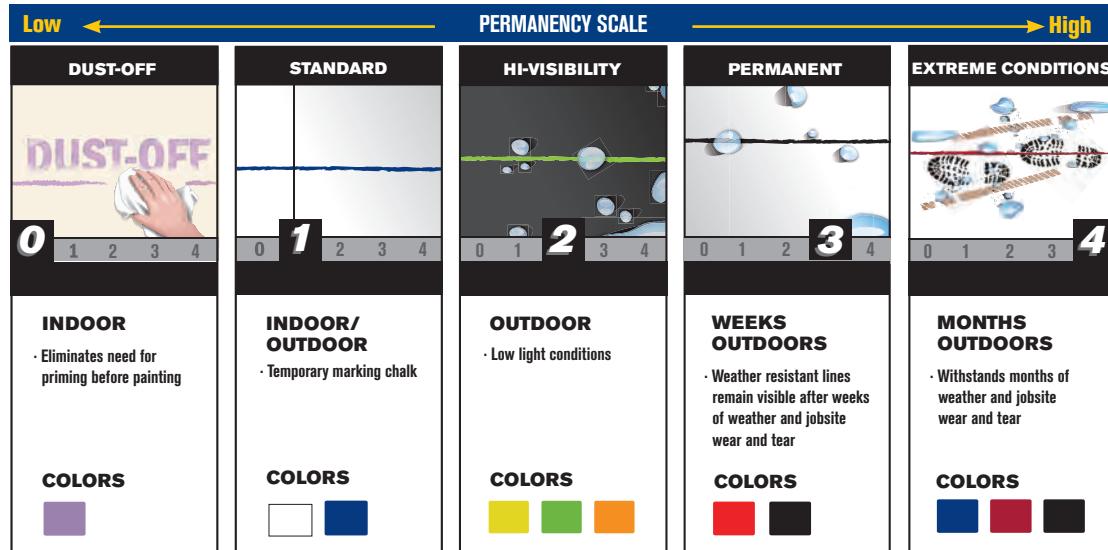

#### The Right Chalk for Every Job

The IRWIN STRAIT-LINE range of category-leading marking products include Dust-off Chalk and Permanent Staining Chalk. Dust-Off Chalk is temporary chalk that can be used to mark interior walls and trim and then wiped away cleanly. Permanent Staining chalk is great for extreme outdoor conditions because it can withstand harsh weather conditions and months of jobsite wear.

In addition to Dust-Off and Permanent Staining, the range of chalk has varying levels of permanence, color and special uses. So whether working indoors or outdoors, on finished surfaces or in extreme conditions, IRWIN STRAIT-LINE has the ideal chalk for every job.

## Carpenter Saws

### IRWIN® Universal HandSaw

The IRWIN Universal Handsaw delivers performance and quality results that users demand on the jobsite. With a patent-pending handle design, the angle in which force is exerted converts energy into full blade strokes, cutting through virtually any material. This specially-designed handle, combined with universal triple-ground teeth, completely eliminates binding, and cuts three times faster than traditional hand saws. The Universal Handsaw provides the speed of a coarse-cutting saw, and the fine finish of a fine-cutting saw. No matter what the application, this powerful handsaw will hold up to the demands on the jobsite, proving to be the only handsaw the professional tradesman will ever need.

## Pull Saws

### Pull Saw Advantages

Pull Saws do not have to withstand a pushing force, so a micro-thin blade can be used. The thin blade and precision ground teeth provide clean cuts. The pulling motion prevents binding and provides better control. Less weight, coupled with the natural pulling motion, results in less user fatigue.

Type of Saw	Typical User	Common Application

### Bi-Metal Snap Blades

The IRWIN® Blue Blade™ has revolutionized traditional snap blades with the introduction of Bi-Metal technology. Bi-Metal snap blades are produced through a patented process of combining two types of metal, spring steel and high speed steel, allowing the blade to bend without accidentally breaking. It also ensures that the blade snaps cleanly on the score every time.

WELDTEC™ Saw Blades

## Made Stronger. Lasts Longer.™

IRWIN® has redefined excellence in the world of saw blades with the introduction of MARATHON® with WeldTec. This revolutionary new saw blade has WELDED carbide teeth for a 30% stronger tooth bond that gives you 50% longer life. UC2™ (sub-micro grain) carbide teeth are 70% more compact than standard carbide teeth and are sharpened to finer, more durable cutting edges that stay sharper longer. The E.O.T.™ grind technology, where every other tooth is ground thinner, makes this the FASTEST FRAMING BLADE EVER™.

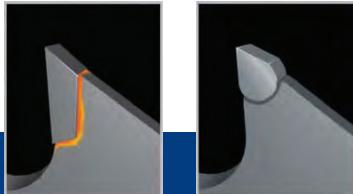

### WELDTEC SAW BLADE FEATURES

1. WeldTec Technology means the carbide teeth are welded, not brazed, resulting in 30% stronger tooth bond and longest life & durability
2. UC2 Carbide with Sub-micro grain is 70% tougher than standard carbide, stays sharper longer, with best in class cut quality
3. E.O.T. Grind Technology with patented tooth design, where every other tooth is ground thinner for the FASTEST FRAMING BLADE EVER
4. Innovative heat vents & expansion slots for straighter cuts
5. Reinforced shoulder for durability

### CIRCULAR SAW BLADES

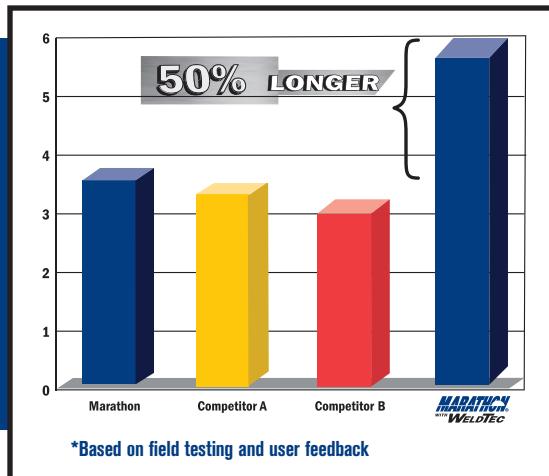

#### Braze vs. Weld

Standard brazed blades use a brazing material, which acts like a glue, to join the carbide tooth to the steel plate. This bond is only as strong as the brazing material, which softens as heat builds up during a cut and can cause tooth loss upon impact.

Marathon with WeldTec has welded carbide teeth. Welding fuses the carbide teeth to the steel plate, which makes the bond as strong as the base material. This bond is unaffected by heat build up and results in superior tooth retention.

## Bi-Metal Hole Saws / Hole Saw Arbors

### High Quality Construction For Fast Clean Cuts

Each IRWIN Hole Saw is crafted from the highest quality bi-metal. The High Speed steel teeth are welded to a carbon steel body for bi-metal construction that allows a Hole Saw to stay sharper longer.

Because IRWIN Hole Saws are engineered and manufactured for exceptional sharpness and durability, they will cut a variety of materials. These saws will cut holes in wood, aluminum, copper, iron, stainless steel and zinc.

**Torsion Screwdriving Bit Lasts 3X Longer than Other Bits**

Superior fit, increased durability and the ability to withstand high torque applications are the IRWIN Torsion difference. A unique four-hit, cold-forged manufacturing process enables better fitment into screws with less camout and is compatible with all drills and bit holders. The innovative heat-treating process provides greater durability for bit users. The IRWIN Torsion bit lasts longer and delivers professional performance that stands up to rigorous use. The Torsion bit's extreme torque output is derived from a precise cylindrical body geometry designed by IRWIN engineers to ensure the highest torque load in IRWIN history.

**TORSION SCREWDRIVING BIT  
FEATURES**

1. Forged bit reduces stripping and increases bit life
2. Heavy-duty cold-forged steel for higher torque output
3. Quick Change shank for use in all drills

## Screw Guides / Insert Bit Holders

### Screw Guides – Retracting Sleeves

Engineered to hold long fasteners in place, the screw guide sleeve retracts as the fastener is driven into the workpiece. It is especially useful in hard-to-reach applications.

#### Features

- Ideal for extra long fasteners
- Magnetic for secure retention of fastener
- Reduces fastener slipping and wobble
- Designed for use with insert bits only

## Nutsetters

IRWIN Nutsetters stand apart from the competition by combining unsurpassed magnetic power and high performance materials to provide total control of the fastener.

## Lobular Design

- Drives the fastener on the side, instead of forcing the corners to turn
- Maintains the true shape of the fastener, dramatically reducing breakage and stripping damage
- Provides more clearance on the corners of the fastener where paint build-up can occur

## Features

- Magnetic nutsetters use magnets that are 4X more powerful than common magnets
- Positive retention of the screw improves installation rate
- Universal 1/4" hex shank fits most power tools and quick-change chuck adapters

#### 118° Conventional Point

- General use
- Not self-centering
- For stationary drills
- Performs better in softer materials than hard metal

118° Point Angle

#### 135° Split Point

- Self-centering (won't "walk")
- For portable drills
- Requires less force than 118°

135° Point Angle

#### TURBOMAX® Tip

- Self-centering (won't "walk")
- Precision-ground to stay sharp longer and drill faster
- For portable drills
- Requires less force than 118°

## Speeds and Feeds for Deep-Hole Drilling

Holes that qualify as "deep-hole drilling" are three or more drill bit diameters deep. When drilling this deep, the speed and feed rate must be adjusted to reduce friction. Friction creates heat, and heat build-up in the drill bit can cause failure and breakage. Lubricants help dissipate heat from the tip of the drill bit, prolonging drill life, and should always be used when deep-hole drilling.

Another technique that should be used when deep-hole drilling is "pecking". Pecking is the process whereby the user drills a short distance, then backs the drill out of the hole before progressing. Pecking lessens the possibility of chips getting lodged in the flute, and allows for the reintroduction of lubricant into the hole.

### Speed and Feed Reduction (Based upon the hole depth)

Hole Depth to Dia. (times drill dia.)	Speed Reduction	Feed Reduction
3	10%	10%
4	20%	10%
5	30%	20%
6	35 - 40%	20%

# IRWIN®

## Wood Drilling

## A Century of Quality and Innovation

In 1885, the IRWIN® Auger Bit Company was formed. Over 125 years later, IRWIN is still the leading manufacturer of wood drilling bits and accessories. No matter what wood drilling project you face, IRWIN Tools makes a drill bit that performs the job better. Our mark of quality is stamped right on the shank of our full range of bits. Whether the job requires quick, clean holes, or precise finish work, IRWIN has a bit for every application and every need.

The all new IRWIN SPEEDBOR® with Weldtec™ Ship Auger Bits are MADE STRONGER and LAST LONGER. With a patent-pending WeldTec cutting edge, these bits are durable, and have twice the nail cutting life of traditional ship auger bits. The bits are fully forged, for added durability; have an aggressive screw pitch for faster drilling; and wide flutes for maximum chip removal. Only IRWIN offers the superior performance and added durability of WeldTec.

Use the chart below to determine which bit is best for the job at hand.

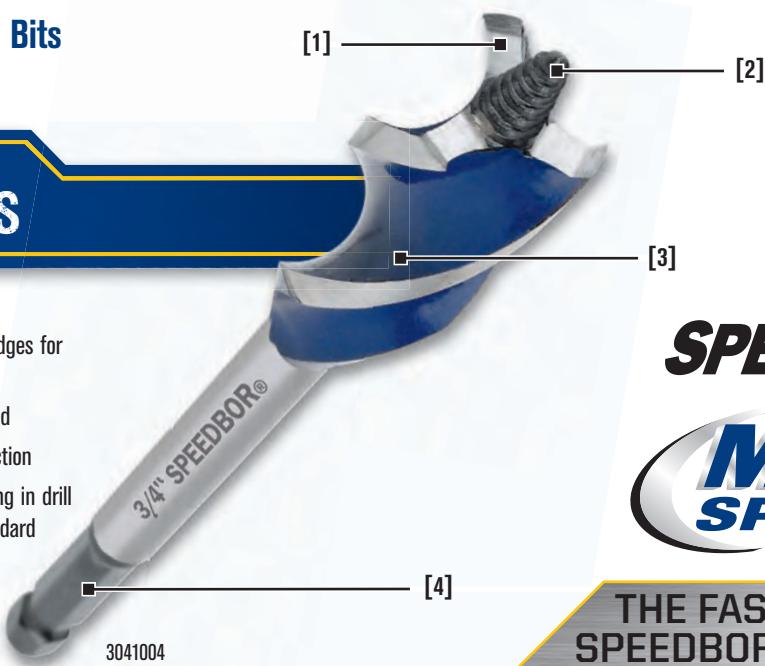

Bit Style	Size Range	Typical Trades	Application Benefits
Tri-Flute Bit 	7/16" to 1-1/2" diameter	Carpentry, Electrical, Plumbing	Fast, clean holes with reduced "break out" when through-hole drilling. Full screw-tip requires less effort.
Spade Bit 	1/4" to 1-1/2" diameter 4-3/4" to 16" lengths	Carpentry, Electrical, Plumbing	Fast, clean holes with reduced "break out" when through-hole drilling.
I-100 Solid Center Auger Bit 	1/4" to 1-1/2" diameter 7-1/2" length	Carpentry, Electrical, Plumbing	Self-feeding tip pulls bit into the work for repetitive cutting of fast clean holes with a clean exit hole. Single-spur cutting edge scribes the circumference of the hole for a smoother finish.
Ship Auger Bit 	3/8" to 2" diameter 7-1/2" to 29" lengths	Public Utilities, Electrical, Plumbing, Carpentry, Log Homes	Hollow center provides better chip removal for deeper holes in utility poles and logs.
Installer Bit 	1/4" to 3/4" diameter 12" to 30" lengths	Telecommunications, Cable/Internet, Security Systems	Wire hole near the end of the bit enables user to pull wire back through after drilling the hole.
Self-Feed Bit 	1" to 4-5/8" diameter	Plumbing, Electrical, General Contracting	Replaceable self-feeding tip pulls bit into the wood. For cutting larger holes with clean edges.
Forstner Bit 	1/4" to 2-1/8" diameter	Fine Woodworking, Cabinet Making	Precise cutting of smooth, flat-bottomed (blind) holes with clean, sharp edges.
Brad Point Bit 	1/8" to 1/2" diameter	Woodworking, Cabinet Making	Precise cutting of smooth through-holes with clean, sharp edges and reduced "break out."
Countersink Bit 	1/8" to 1/2" diameter	Woodworking, Cabinet Making	Perfect for variable-size countersink holes.
Plug Cutters 	1/8" to 1/2" diameter	Woodworking, Cabinet Making	Perfect for cutting dowels or plug holes.
Quick Change Extensions 	1/4" available in 2", 6" and 12" length 3/8" available in 2", 5-1/2" and 12" length 7/16" available in 5-1/2", 12" and 18" length	Woodworking, Cabinet Making	Lock-n-Load one-handed quick release.

## Ship Auger Bits

IRWIN revolutionizes cutting and drilling tools with the patent-pending WeldTec™ cutting edge. The new IRWIN SPEEDBOR® with WeldTec Ship Auger Bits are MADE STRONGER and LAST LONGER because a harder cutting edge is welded to the base material. The result is 2X longer nail cutting life versus traditional ship auger bits. The superior performance and durability of WeldTec is only available from IRWIN.

### 1/2" Female Square Socket Impact Wrench - 51S18 Series

- Quick release button on the shank
- Medium-fast screw point is ideal for general wood drilling applications

49916

### Solid Center Auger with Cutting Spur - I-100 Series

- Solid center design provides extra rigidity while drilling
- Wide lands keep the bit straight as it bores through the hole. The flutes are ground behind the lands to funnel chips to the inside of the bit and away from the outside diameter, producing a faster, cleaner cut
- Single-spur cutting edge scribes the circumference of the hole for a smoother finish
- Coarse screw point provides fast drilling in hard and soft woods
- Full-length heat-treated bit guards against bending in heavy-duty applications, and strengthens the twist where the greatest strain occurs

At IRWIN, we understand it's all about performance, and you only get out of a tool what you put into a tool. The new **Performance Threading System™** from IRWIN HANSON is a prime example. With exceptional innovation, these threading tools are now easier to use, and maintain the high thread quality and durability professionals trust. The IRWIN HANSON **Performance Threading System** includes self-aligning taps and dies for the perfect thread, every single time. New, innovative drive tools make set-up a snap. And, it's all available in handy, modular set cases that fit in the smallest drawers, have removable lids, and easy-to-read marked sizes. Professionals can choose only what they need.

### PERFORMANCE THREADING SYSTEM FEATURES

1. Chip Breaking Technology (CBT) cuts chips easier
2. Tap size and recommended drill bit size are laser etched on each tool for easy identification

### Material Types

#### High Carbon Steel (HCS)

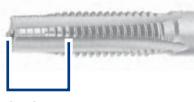

For hand tapping applications

#### High Speed Steel (HSS)

For machine tapping where critical dimensions are required

### Tap Point Styles

#### Self-Aligning Taps

8-10 threads

- Starts straight every time
- Chip-breaking technology cuts chips easier

#### Plug Taps

3-5 threads

- 3 to 5 threads chamfered
- Most common chamfer
- Ideal for all general purpose threading

#### Taper Taps

8-10 threads

- 8 to 10 threads chamfered
- Ideal for tough starting applications
- Preferred use with deep or through hole applications

#### Bottom Taps

1-2 threads

- 1 to 2 threads chamfered
- Shortest and least efficient standard chamfer
- Ideal for threading close to the bottom of blind holes

## Die Styles

### Self-Aligning Dies

#### Additional Strength

- Tap size and recommended drill bit size are laser etched on each tool for easy identification

#### 1" Across Hex Flats

- Threads straight every turn
- More steel at critical points for extra strength

### Hexagon Dies

#### 5/8", 1", 1-7/16" & 1-13/16" Across Hex Flats

- Best suited for maintenance and repair work
- Recommended for use with hexagonal die stock handles
- In area with limited space, die can be used with a wrench or socket

### Solid Round Dies

#### 1" & 1-1/2" Overall Diameter

- Ideal for general purpose threading
- Fits into adjustable guide or plain die stock handles

### Adjustable Round Dies

#### 1", 1-1/2", 2" & 3" Overall Diameter

- Adjustable dies allow the user to under or over cut their threads

## Extractors

[www.irwin.com](http://www.irwin.com)

## Serious Solutions for Stuck Fasteners

IRWIN® Tools has the solution to deal with a stuck fastener, a rounded or broken head, a snapped stud, or a stripped screw or fitting. Five different styles of extractors give you extra gripping power to remove problem fasteners without damaging workpieces.

## Remove the Guesswork in Fastener Extraction

Fasteners vary widely in composition and hardness. That's why IRWIN has many different products for removing damaged fasteners and parts. Each extraction tool is specifically designed to take into account the material involved and make removal easier. The guidelines below will help you choose the tool that will deliver the optimal results for your particular situation.

### Guide for Using Screw Extractors

Drill a hole in the threaded part or fastener to be removed. Drill deep enough for the extractor to grip without bottoming out. For best results, use a left-handed drill bit. Insert the extractor and turn with a wrench or drive tool.
