Options and Specials .....pg. 9

### **Hydraulic Gate Valve Cylinders**

Product Overview .....pg. 10

#### **1-1/2" to 8" Bore**

How to Order .....pg. 11

Technical Details .....pg. 12

Components and Technical Details .....pg. 13

Warranty Statement .....pg. 14

## Valve Actuator markets are typically:

- Oil & Gas
- Power Gen
- Pulp and Paper
- Water

## Aluminum Components – 2-1/2” through 12” Bore

The end plates and piston are made from high strength Aluminum. Combined with an Aluminum or composite cylinder tube the ITT GV actuators are over 50% lighter than actuators constructed from steel components. The end plates are black hard coat anodized for high corrosion and abrasion resistance.

## End plates with rounded corners

All end plates have rounded versus sharp corners to minimize the potential for injury when handling the actuator.

## Wear Band Piston

Piston includes a wear band to support the weight of the piston and rod assembly as well as to handle side loading. The wear band also serves to prevent the over compression of the piston seal and practically eliminates compression set of the piston seal during long idle periods.

## Bright Zinc Coated Tie Rods

20” Gate Valve Cylinder

4” Gate Valve Cylinder

6” Gate Valve Cylinder

ITEM	COMPONENT	DESCRIPTION	ITEM	COMPONENT	DESCRIPTION
1	Piston	Aluminum/Steel*	5	Tie Rod and Nuts	Zinc Plated High Strength Alloy Steel
2	Piston Seals	Buna Nitrile Quad Ring / Polypak	6	Head and Rear Caps	Aluminum/Steel*
2	Wear Strip	Carbon Reinforced PTFE	7	Ports	NPT
3	Rod Bearing	Ductile Cast Iron	8	Tube	Aluminum/Composite*
4	Rod	Hard Chrome Plated High Strength Alloy Steel			

\*Alternate materials of construction are available for services where aluminum or steel is not compatible.

TEMPERATURE RATINGS	
<b>Standard Materials</b>	
Buna-N seals and aluminum tube (2.5-5 in. bores): -20°F - 220°F (-29°C - 104°C)	
Buna-N seals and composite tube (6-24 in. bores): -20°F - 220°F (-29°C - 104°C)	
<b>Optional Materials</b>	
Buna-N seals and steel tube (all bore sizes): -20°F - 220°F (-29°C - 104°C)	
Fluorocarbon and aluminum tube (2.5-5 in. bores): -15°F - 400°F (-26°C - 204°C)	
Fluorocarbon and steel tube (6-24 in. bores): -15°F - 400°F (-26°C - 204°C)

**CAUTION: CHECK MAXIMUM OPERATING PRESSURE LISTED ON CYLINDER LABEL BEFORE APPLYING PRESSURE TO CYLINDER. EXCEEDING THE PRESSURE RATING LISTED ON THE CYLINDER MAY CAUSE FAILURE WHICH MAY ENDANGER PERSONNEL AND/OR EQUIPMENT.**

**WARNING: READ INSTALLATION SERVICE INSTRUCTIONS AND GENERAL PARTS BREAKDOWN BEFORE INSTALLATION, OPERATION OR SERVICING. THIS MANUAL IS NOT FOR SPRING LOADED CYLINDERS.**

**NOTICE: DISASSEMBLY OF THIS PRODUCT WILL VOID WARRANTY**

### GV ACTUATOR INSTALLATION AND MAINTENANCE INSTRUCTIONS

1. **GENERAL:** The parts drawing on Page 3 shows a complete listing of parts and is applicable to all standard series GV air cylinders (2.50" through 24.00" bores only). This parts drawing when used in conjunction with the parts listed and kits, should facilitate the ordering of any replacement parts or kits by specifying:

- A. Cylinder Part Number as it appears on the identification label on the cylinder tube located on the port side.
- B. Item number and part name or kit type and name.

2. **INSTALLATION OF CYLINDER:** The seals and packing of standard air cylinders operate within the temperature range of -20°F (-29°C) to 220°F (104°C). Baffles are recommended to shield cylinder from heat, whenever practical. For unusually high or low temperatures, different seal materials may have been used. (Contact ITT Westminster @ 864-647-9521). For the cylinder to perform well, it must be properly installed. Alignment of the cylinder with load is most important. Forcing the rod or mounting bolts into position indicates that the cylinder is not properly aligned, and permanent damage may result from such installation. Protective port covers should not be removed before installing air line connections as dirt or other foreign particles may enter the cylinder. All pipe and fittings must be clean before making final connections.

#### 3. PROCEDURE FOR REPACKING CYLINDER:

**NOTE: DISASSEMBLY BEFORE WARRANTY PERIOD EXPIRES WILL VOID WARRANTY! (See Page 8 for Disassembly/Parts Diagram)**

- A. Disconnect air lines from head cap and rear cap ports of cylinder.
- B. Remove the tie rod nuts (5) and tie rods (4).  
**Note:** Measure and record tie rod length protruding from the head cap.
- C. Remove rear cap (2) and then head cap (1). The rod bearing (11) will come off with the head cap.
- D. Remove piston and rod assembly from tube (3).
- E. To disassemble rear cap (2), remove cap O-ring or gasket (13).
- F. To disassemble head cap (1):
  - 1. Remove head cap O-ring or gasket (13).
  - 2. 12.00"–24.00" bore sizes remove bearing retainer ring (12) and rod bearing (11) from head cap (1).  
**NOTE:** 2.50"–10.00" rod bearings (11) are press fit – DO NOT REMOVE.
  - 3. Remove rod seal (15). For 12.00"–24.00" bore sizes remove the rod bearing O-ring (17).
  - 4. Remove rod wiper (16) from the head cap.

4. **CLEANING:** Clean all parts thoroughly. The packing and seals in this cylinder are compatible with hydraulic oils, air, and neutral fluids. The cleaning agent must also be compatible to avoid damage to packing and seals. Whenever a particular lubricant is specified for a particular installation, do not deviate from the specification without checking for compatibility.

#### 5. INSPECTION

- A. Inspect all packing and seals for swelling, shrinkage, wear, nicks, cuts

- B. Check and inspect bore of tube for scratches, excessive wear, and any other defect that might damage piston packing or cause piston bypass.
- C. Inspect piston rod for signs of wear, nicks, dents, scratches, or anything that may damage rod packing or rod bearing.
- D. Inspect wear strip for excessive uneven wear.

**NOTE:** Excessive wear on one side of piston rod, rod bearing, or wear strip usually indicates misalignment in installation and should be corrected.

6. **REPLACEMENT:** Replace all damaged packing seals, rod wiper, and wear strip.

7. **LUBRICATION:** Series GV Actuators are pre-lubricated during initial assembly. During the repacking of an air cylinder, pre-lubrication should be re-applied to prevent seal damage and obtain maximum life. Lubricant is applied to the rod seals, piston packing, and liberally to the tube bore. Use NYE RHEOLUBE 368AXF or equivalent.

8. **REASSEMBLY:** The procedure for reassembly is essentially the reverse of disassembly. However, the following exceptions and considerations should be noted:

- A. All O-rings and gaskets should be well-coated with lubricant after they are installed in their respective grooves and prior to reassembly with the mating part. Care must be taken when assembling O-rings, gaskets and packing that they are not damaged, as this will cause leakage.
- B. Tie rod threads and nut bearing faces should be well lubricated to allow tightening the nuts evenly for proper pre-stressing. To avoid twisting of the tie rods during tightening, hold with vise grip or clamp. To assure equal pre-stressing of the tie rods, first thread on nuts evenly and snug to align assembly, then the nuts are to be tightened using a diagonal pattern. For proper tie rod pre-stressing, they should be torqued as recommended (See "GV Series Tie Rod Torque Reference" table below).

#### 9. PISTON-ROD

**NOTE:** The piston-rod assembly should not require disassembly unless replacement of piston (7) or the piston rod (8) is required. It is recommended this be returned to the factory for repair. (Contact ITT Westminster @ 864-647-9521 for additional information.)

#### 10. TESTING

After the cylinder has been completely reassembled, it should be tested, either on a test bench or in the regular installation. Watch for the following as the cylinder is cycled at operating pressures.

- A. Rod gland leakage.
- B. Leakage at the head and rear cap locations of the tube O-rings or gaskets.

**NOTE:** This product is not to be modified in any fashion without prior written approval from ITT.

**NOTE:** If cylinders are to be stored for prolonged periods, contact ITT or instructions.

At ITT we produce the following custom options and specials:

- Spring Extend - Air Retract
- Spring Retract - Air Extend
- Steel Tubes
- Adjustable Stops
- Special Coatings
- Special Mountings
- All Stainless Steel Components
- Multi-Piston for:
  - Multi-Power
  - Multi-Position
- Special Ports
- Oversized Rods
- Custom Rod Configurations

**If you can imagine a design, ITT can provide the solution.**

\*Total actuator weight lbs. (kgs.) = A + (B x Stroke) + (C x Added Rod Length)

### Gate Valve Cylinder Series Warranty

Seller warrants for one year from the date of shipment Seller's manufactured products to the extent that Seller will replace those having defects in material or workmanship when used for the purpose and in the manner which Seller recommends. If Seller's examination shall disclose to its satisfaction that the products are defective, and an adjustment is required, the amount of such adjustment shall not exceed the net sales price of the defective products only and no allowance will be made for labor or expense of repairing or replacing defective products or workmanship or damage resulting from the same. Seller warrants the products which it sells of other manufacturers to the extent of the warranties of their respective makers. Where engineering design or fabrication work is supplied, Buyer's acceptance of Seller's design or of delivery of work shall relieve Seller of all further obligation, other than as expressed in Seller's product warranty. THIS IS SELLER'S SOLE WARRANTY. SELLER MAKES NO OTHER WARRANTY OF ANY KIND, EXPRESSED OR IMPLIED. AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE WHICH EXCEED SELLER'S AFORESTATED OBLIGATION ARE HEREBY DISCLAIMED BY SELLER AND EXCLUDED FROM THIS WARRANTY. Seller neither assumes, nor authorizes any person to assume for it, any other obligation in connection with the sale of its engineering designs or products. This warranty shall not apply to any products or parts of products which (a) have been repaired or altered outside of Seller's factory, in any manner; or (b) have been subjected to misuse, negligence or accidents; or (c) have been used in a manner contrary to Seller's instructions or recommendations. Seller shall not be responsible for design errors due to inaccurate or incomplete information supplied by Buyer or its representatives.

**SELLER'S LIABILITY:** Seller will not be liable for any loss, damage, cost of repairs, incidental or consequential damages of any kind, whether based upon warranty (except for the obligation accepted by Seller under "Warranty" above), contract or negligence, arising in connection with the design, manufacture, sale, use or repair of the products or of the engineering designs supplied to Buyer.

ENGINEERED FOR LIFE
