◀ FAMILY OF PRODUCTS

▶ AIR CHAMP® FEATURES AND BENEFITS

For nearly one-half century, Nexen has been designing and manufacturing Clutches, Brakes and other products to support your motion control requirements. Each product is a result of years of innovative design and engineering, precise manufacturing and most importantly - understanding the requirements of motion control applications.

Whether your application requirements are simple or extensive, you will find our Air Champ® product family will service your motion control needs time and time again. You will find specific product features, benefits and specifications for every Air Champ® product in this catalog. However, there is a common thread of features and benefits throughout the Air Champ® product line.

Simple design, durability, efficiency and economy make Air Champ® products the best choice for your motion control applications.

“Air Champ”

Simple Design

Easy to understand • Easy to install

Air Activated

Increased efficiency and productivity • Inexpensive to operate

High Thermal Dissipation

Less torque fade • High cyclic rates • Long product life

Self Adjusting

Automatic torque maintenance • Worry-free operation

Low Maintenance

Long product life • Less down time • Easily serviced

Wide Selection

Application and Operational versatility • Mounting flexibility
Versatile product characteristics • Imperial & Metric designs

Ready to Ship

Readily available stock • Quick service

In accordance with Nexen’s established policy of constant product improvement, the specifications contained in this document are subject to change without notice. Technical data listed in this document are based on the latest information available at the time of printing and are also subject to change without notice. Nexen manufactures and markets over twenty different types of clutches, brakes and clutch/brakes for both standard and metric applications—with many model sizes of each. Nexen also provides many accessories and controls to fit your needs. All are of the highest quality, simply designed, well engineered and ruggedly built. Nexen has a standard clutch or brake to solve every motion control need you can imagine.

The illustrations of the “Air Champ.” Family of Products on the following pages are intended to show a representation of the product line and to express only their basic function using typical cross sections. Please refer to specific product pages for application, specification and product information. Designs shown are subject to change without notice.

ENGAGED

DISENGAGED

FRICITION CLUTCHES

Single-disc, self-adjusting Clutches mount on a driving or driven shaft. They cover transmitted horsepower ratings from fractional to 25 hp, torque ratings to 5000 In Lb with thermal capacities to 2.5 thermal horsepower and maximum operating speeds to 3600 rpm. Most are available in Sheave, Pilot or Coupling Mount versions. 9 Standard Models, 5 Metric Models address these product functions:

- ▶ Controlled Acceleration
- ▶ Inching/Jogging
- ▶ Rapid Cycling/Indexing
- ▶ Positioning
- ▶ Reversing/Multiple Speed
- ▶ Tension Control
- ▶ Overload Protection
- ▶ Disconnect
- ▶ Torque Limiting

TOOTH CLUTCHES

Available in a variety of Single or Multiple Position Models, as well as a Sprocket Tooth design, there are 40 Standard and 35 Metric Models in all. Most can be used with a Single or Double Flex Coupling Assembly for in-line coupling applications.

Sprocket Tooth Clutches (5HS) are ideal for in-line, zoned conveyor applications, as well as other applications requiring bi-directional movement. They cover torque ratings up to 3,140 In Lb, and operational speeds up to 4000 rpm in 3 different Bore sizes. Choose between Single strand or Integral double/single sprocket mount designs. There are 3 Standard Models.

Multiple Position Clutches are available in either an Open (5H, 5HP) or Enclosed (5HP-E) design, as well as Flange (5H) or Pilot Mount (5HP, 5HP-E) options. They cover torque ratings up to 55,000 In Lb, and operational speeds up to 4000 rpm in 15 different Bore sizes. The Open-Flange Mount design is available in 7 Standard and 7 Metric Models; the Open-Pilot Mount design is available in 10 Standard and 8 Metric Models; the Enclosed-Pilot Mount design is available in 6 Standard Models and 6 Metric Models.

▶ **TOOTH CLUTCHES CONT.**

Single Position Clutches are available in either an Open (5H-SP) or Enclosed (5HP-SP-E) Pilot Mount design. They cover torque ratings up to 32,000 In Lb, and operational speeds up to 3700 rpm in 13 different Bore sizes. The Open design is available in 8 Standard and 8 Metric Models; the Enclosed design is available in 6 Standard Models and 6 Metric Models.

Tooth Clutches address these types of functions:

- ▶ Positioning
- ▶ Reversing/Multiple Speed
- ▶ Disconnect
- ▶ Positive Drive

▶ **MULTIPLE DISC CLUTCHES**

Multiple-Disc Clutches feature either 3 or 4 friction discs and facings positioned side-by-side. Static air pressure squeezes them together—the result is a small package for high torque applications. Torque capacities range from 750 to 10,000 In Lb, with operational speeds ranging from 700 to 1800 rpm in 12 different Bore sizes. Single or Double Flex Clutch Couplings can be added for in-line coupling applications. 7 Standard Models provide 12 different Bore sizes. Multiple-Disc Clutches address these functions:

- ▶ High Torque
- ▶ Small Package

DISENGAGED

FAMILY OF PRODUCTS

“Air Champ”

DUAL PLATE CLUTCHES & BRAKES

Dual Plate Clutches and Brakes each come in 4 Standard Models, whose modular design makes custom design easy and less expensive. For applications requiring up to 36,000 In Lb of torque, speeds up to 2200 rpm, thermal horsepower values up to 9.0, motor horsepower ratings from 5 hp to 150 hp. Clutches are designed for either shaft-end mounting or thru-shaft mounting. Brakes can either mount rigidly or non-rigidly. As many as 8 Bore sizes per Clutch Model, 7 Bore sizes per Brake Model with further customization possible. Sheave Mount options are also available for Clutches. Dual Plate Clutches are perfect for these functions:

- ▶ Controlled Acceleration
- ▶ Inching/Jogging
- ▶ Rapid Cycling/Indexing
- ▶ Positioning
- ▶ Reversing/Multiple Speed
- ▶ Tension Control
- ▶ Overload Protection
- ▶ Torque Limiting

Dual Plate Brakes address these functions:

- ▶ Controlled Deceleration
- ▶ Stopping/Holding

HIGH CAPACITY CLUTCHES & BRAKES

16 Standard Models of air-actuated Clutch & Brake Elements are designed for heavy duty industrial applications that require high torque and low inertia. Used as either Clutches or Brakes, these elements are available in disc sizes from 11.50 to 25 inches. Torque capacities for these elements range from 12,000 to 300,000 In Lb, with speeds up to 2200 rpm and thermal horsepower values up to 14.7. Elements are available in two styles: Dual Faced Models, having single disc assemblies; and Quad Faced Models, having double disc assemblies. Each style is available in an S Model (standard coefficient friction lining), and an H Model (high coefficient friction lining). Bore sizes range from 1to 6.50 inches. High Capacity Clutches address these functions:

- ▶ Controlled Acceleration
- ▶ Inching/Jogging
- ▶ Rapid Cycling/Indexing
- ▶ Positioning
- ▶ Reversing/Multiple Speed

High Capacity Brakes address these functions:

- ▶ Stopping/Holding

▶ **OVERLOAD PROTECTION DEVICES**

Torque Limiters are pneumatic overload devices designed to instantly disengage at a pre-set torque level. The torque output is easily changed by adjusting the air pressure setting. The Single Position design assures re-engagement of the drive, from a complete stop, in the same position every time, thus providing exact timing of both components. A Limit Switch Assembly senses electrical problems and interrupts power prior to damage occurring. Torque limiters are available in either Open or Enclosed designs in two mounting styles—Set Collar and Set Screw. Single or Double Flex Coupling Adapters can be added for vibration and shock protection, and in-line coupling applications. Air Pressure Control Systems are available in 2 styles to provide remote adjustment of torque settings. There are 30 Standard Models and 9 Metric Models to choose from, each with a wide range of Bore sizes and operating specifications. Torque Limiters address these functions:

- ▶ Positioning
- ▶ Overload Protection
- ▶ Disconnect
- ▶ Positive Drive

▶ **FLEXIBLE COUPLINGS**

These Flexible Couplings attach to a Tooth Clutch, Multi-Disc Clutch or Torque Limiter for non-thru shaft applications. Available in Single or Double Flex designs—8 Standard models each for Tooth Clutches, 7 Standard Models each for Multi-Disc Clutches and Torque Limiters. Their composite material construction is corrosion resistant and requires no lubrication or cleaning. you will find information on these industry leading products in the catalog section for each applicable Clutch or Torque Limiter. Flexible Couplings provide these benefits:

- ▶ High Misalignment Capability
- ▶ Multiple Shaft Synchronization/Long Line Shaft Capability
- ▶ Torsional Stiffness
- ▶ Shock/Vibration Dampening
- ▶ Corrosion Resistance

FAMILY OF PRODUCTS

► FRICTION BRAKES

Low inertia, high thermal dissipation and self-adjusting facings make these ideal for many applications. Choose between Straight or Tapered Bore units in a wide range of operational specifications. Each Model comes in a Standard Bore size, with customization possible through the use of Bushings. You'll find 24 Standard Models and 4 Metric Models from which to choose. Friction Brakes address these functions:

- Controlled Deceleration
- Rapid Cycling/Indexing
- Positioning
- Tension Control
- Stopping/Holding

► CALIPER BRAKES

10 Standard Models address a wide range of Caliper Brake requirements. Choose between Spring or Air Actuation, 10 Disc diameters and a variety of design styles. Caliper spacing is movable and shoes are adjustable on many Models. Caliper Brakes address these functions:

- Controlled Deceleration
- Tension Control
- Stopping/Holding

► DRUM BRAKES

7 Standard Models offer maximum efficiency and dependability. All can mount on the shaft, a few can also bracket mount. 3 Models have a hinge top design for use with removable brake drums. Drums available in Standard Bore sizes or without bore customization. Operational specifications provide a wide range of application criteria. Drum Brakes address these functions:

- Controlled Deceleration
- Tension Control
- Stopping/Holding

▶ **SPRING ENGAGED BRAKES**

Spring Engaged Brakes are available in 18 Standard Models with either Straight or Tapered Bore and 4 Metric Models with a Straight Bore. A variety of Standard Bore sizes are available, some Models provide bore size customization. Product specifications cover a broad range of operational criteria. Spring Engaged Brakes address these functions:

- ▶ Stopping/Holding

DISENGAGED

▶ **THRU-SHAFT MOUNT CLUTCH-BRAKES**

Thru-Shaft Mounted Clutch/Brakes combine the features of a Friction Clutch with a Friction Brake into a single unit. 9 Standard Models offer Pilot Mount, Sheave Mount and Pilot Mount with Coupling Half options. Pilot Mount units are available in 2 Standard Bore sizes with customization possible with Bushings and Couplings. Thru-Shaft Mount units come in a range of bore sizes and Sheave styles. Operation specifications throughout the category will address almost any need. Thru-Shaft Mount Clutch-Brakes address these functions:

- ▶ Controlled Acceleration
- ▶ Controlled Deceleration
- ▶ Inching/Jogging
- ▶ Stopping/Holding
- ▶ Disconnect

CLUTCH DISENGAGED

BRAKE DISENGAGED

FAMILY OF PRODUCTS

▶ CLUTCH-DISC CALIPER BRAKES

Thru-Shaft Mounted Clutch-Disc Caliper Brakes combine the features of a Friction Clutch with a Disc-Caliper Brake. 4 Standard Models offer Pilot Mount, Sheave Mount and Pilot Mount with Coupling Half options. Pilot Mount units are available in 2 Standard Bore sizes, with customization possible with Bushings and Couplings. A Sheave Mount unit is available for each model. A Caliper Brake with “T” Bracket and standard Disc sizes for each model round out product line. Operation specifications throughout the category will address almost any need. Clutch-Disc Caliper Brakes address these functions:

- ▶ Controlled Acceleration
- ▶ Controlled Deceleration
- ▶ Inching/Jogging
- ▶ Stopping/Holding
- ▶ Disconnect

▶ NEMA “C” FLANGE CLUTCH-BRAKES

Designed to mount directly to motors and reducers to provide absolute control. There are 5 Standard Models in an Enclosed design, 2 Standard Enclosed Models which are BISSC certified, 4 Standard Models in an Enclosed Spring Engaged design; and 6 Metric Models in an Open design, 7 Metric Models in an Enclosed Design, and 7 Metric Models in an Enclosed Spring Engaged design. Additional options include Mounting Feet and an Input Unit, for use in mounting a pulley. Finish options include black or electroless nickel coating for most models. 4 Standard Bore sizes are available for each model. Operational specifications guarantee performance. This Clutch-Only Enclosed Standard Model is available for “cleanroom” applications calling for only a Clutch applications (it comes only in the black finish.) BISSC certified models provide maximum protection against corrosion and bacteria build-up. NEMA “C” Flange Clutch-Brakes address these functions:

- ▶ Controlled Acceleration
- ▶ Controlled Deceleration
- ▶ Inching/Jogging
- ▶ Stopping/Holding

▶ **MODULAR SYSTEM FOR NEMA “C” FLANGE MOUNTING**

Custom design a power transmission system to fit your specific requirements, using the Nexen Modular System. Interchangeable modular components provide complete flexibility for today's application and tomorrow's changing needs. 4 Modular Units in 4 different sizes enable you to create either a Clutch, Brake or Clutch-Brake configuration. Mounting capabilities are also flexible; choose between Vertical, Horizontal or Gearbox to motor or reducer. Optional Foot Mount Sets come in 2 different designs. Optional Guards allow you to enclose your system. Operation specifications address a broad range of application requirements. This is the System of choice for many customers. The Modular System addresses these functions:

- ▶ Controlled Acceleration
- ▶ Controlled Deceleration
- ▶ Inching/Jogging
- ▶ Stopping/Holding

WEB PRODUCTS APPLICATION GUIDE

Everything you need to control web quality and productivity from unwind through windup, roll after roll.

Nexen offers you a wide range of web control systems and components, supported by our expert technical support and service team.

With Nexen, you can be assured of consistent, high-quality output from your web printing or converting process.

Nexen controls are used successfully with applications as diverse as:

- paper
- film
- rubber
- labels
- textiles
- laminates
- paperboard
- metal strip
- non-wovens
- foil
- plastics
- wire

Precise enough for the laboratory, yet rugged enough for the mill, Nexen control systems are delivered and backed by the recognized leader in web control equipment for almost 50 years.

Everything you need to control web quality and productivity from unwind through windup, roll after roll.

Tension Control Systems

Nexen can help you address your tension control problems at each stage of the process – from unwind through intermediate zone to windup. Nexen systems make it easy to deal with variations in thickness, elasticity, thermal expansion, poorly wound rolls and changing roll diameter. You also get taper tension control when you need it.

Nexen tension control systems offer you cost-cutting technologies to provide:

- Ease of operation
- Accurate, close tolerance measurement
- Indication of tension within the web
- Splice-making capabilities at full line speed

and Clutches

Nexen's line of tension control clutches and brakes offers you the most comprehensive package of features in the industry, in a range of sizes to match your application.

Our patented designs offer you superior, precise torque control at all air pressures. In addition, a ventilated rotor creates an airflow that pulls cooler ambient air through the brake or clutch and dissipates heat away from the unit for better performance.

- Nexen clutches and brakes deliver high thermal dissipation.
- Unique patented airflow design transfers heat away from the unit for better performance.

- Lower-weight rotors mean lower rotational inertia to provide precise control right down to the core and reduced product waste.
- Simple diaphragm actuated calipers offer the widest possible torque range.
- Easy change friction facings.

Web Guiding Systems

Choose from edge position, center position or line follower controls for pinpoint guiding in the unwind, intermediate or windup stage.

A variety of sensors, roll lengths and controllers are available in freestanding web guide models, along with

electrical linear actuators for positioning your unwind and windup stands. Self-contained units offer everything you need in a single package.

You receive Nexen's state-of-the-art electronics for the precise alignment you need for unwind, intermediate and windup control. Now you can produce a quality product at higher line speeds without wrinkling or distortion, while you reduce scrap.

- Displacement guiding
- Accurate roll stand positioning
- Edge, center or line following position control.

APPLICATION GUIDE

TENSION CONTROL SYSTEMS

Precise tension control is vital to any web- or strip-fed operation, the product – whether paper, plastics, metal strip, rubber sheet or wire – must be fed under tension, processed under tension and wound up again under tension.

Factors such as poorly wound rolls, elasticity, roll diameter change and irregularities in web thickness cause significant variations in web tension.

Some applications require taper tension on windup. Winding begins at relatively high tension, with a gradual reduction, or tapering, in tension as the roll builds in diameter.

At the very least, your tension control system must compensate for the change in roll diameter. For precise control and high line speeds, it must also be capable of measuring and controlling tension within very close tolerances.

Nexen systems are available to control variable speed motors and pneumatic and electric brakes and clutches.

Load Cell Based Tension Control

Nexen's load cell based tension control system is a closed loop system which senses tension in a web and compares it to a set point, or desired tension level and automatically adjusts air pressure to a pneumatic clutch or brake to maintain appropriate web tension. The load cell based system can also control electric clutches and brakes.

The load cell based systems also can be used with variable speed drives to maintain proper tension in internal tension zones or at the windup stand.

- Control accuracy of 1-2 percent – highest of any web control systems
- Ideal for use with brakes, drives and clutches
- Simple to operate – set the tension level and let the controller do the rest
- Allows remote computer to determine the tension and set points for each job

Open Loop Tension Control

The open loop tension control system electronically measures or estimates the diameter of the unwind or windup roll. It then modulates a brake to control the unwind, or a clutch or variable speed drive for windup applications to maintain tension as the diameter varies. Accuracy is typically about 8-10 percent.

TR	Tension Read Out	MC	Motor Controller
O	Optical Encoder		Tension Sensor
P	Proximity Switch		Closed Loop Load Cell Based Controller
PS	Power Supply		I to P Transducer
	Open Loop Controls		Dancer Position Sensor
M	Motor		

Output Control
 *For pneumatic clutch: I to D
 For electric clutch: power supply
 For variable-speed motor: motor control

TENSION SENSORS

Tension sensors are the input devices used with load cell based tension systems, both closed loop control systems and tension measuring systems. Tension sensors measure the force applied to the sensor roller and translate this measurement into an electrical signal which can be read by the system.

Nexen offers two types of web tension sensors:

- **Under pillow block (UPB),**
- **Sidewall**

The Nexen UPB-type MB Series is based on linear variable differential transformer (LVDT)

MB Series under Pillow Block Sensors

technology, which provides excellent sensitivity, linearity and accuracy combined with a rugged mechanical design for best resistance to mechanical overload.

Nexen strain gauge type sensors also deliver excellent sensitivity and accuracy, while providing added mounting flexibility for applications with significant mounting restrictions.

Nexen strain gauge sensors are available in shaft-end mount styles for machine sidewall flange-mounting or sidewall through-mounting.

Sidewall Mount Strain Gauge Tension Sensors

The force applied to the sensor roll has two components: the tare weight of the sensor roll and bearings, and the force generated by the web tension at

the specific angle of wrap around the sensor roll.

The following data are required in order to identify the correct sensor for a given application:

- Maximum web tension
- Sensor roll weight
- Sensor roll diameter
- Web angle
- Sensor mounting angle for UPB sensors
- Pillow block center line height – UPB sensors only

For assistance in selecting the appropriate tension sensor for your application, contact Nexen or your local Nexen representative.

TENSION CONTROL BRAKES AND CLUTCHES

Broad Range Torque Control

Nexen brakes and clutches offer you precise control over the full operating range – from the high torque needed to manage a large roll, to the lower torque requirements for more delicate materials and demanding applications.

Tension Brakes

Nexen XTB brakes feature multiple calipers, each composed of a pair of pistons. The calipers can be configured individually or as separately controlled groups – each with its own torque-to-air pressure range to control a separate tension range.

Cooler Operation for Longer Life

Insufficient cooling of the roll shaft and bearings can lead to shaft crystallization and seal meltdown. The recommended maximum shaft bearing temperature is typically 170°F (76,6°C).

The Nexen XTB has a demonstrated bearing temperature of approximately 140°F (60°C) operating at full torque, compared to 240°F (115,5°C) for competitive models.

The rotor, hub and calipers on Nexen clutches and brakes feature a unique airflow design that draws cooler ambient air over and through the rotor and dissipates heat away from the shaft, bearings and diaphragms of the clutch or brake.

The rotor and the fins on the back of the hub draw cool air into the unit, over the air hoses and toward the caliper. The caliper fins direct the heated air out and away from the unit. The air hoses are located along the inner circumference of the calipers to ensure maximum cooling air flow and protection.

STC Clutch/STB Brake

Lower Rotational Inertia for Greater Control

Nexen brakes and clutches are up to 60-percent lower weight than competition, resulting in up to two-thirds less rotational inertia.

Lower rotational inertia means that you can maintain more precise tension control at low torque levels. This is especially critical when running delicate materials such as tissue and nylon. It can also prevent web breakage as the web nears the end of the roll.

A lower weight brake also contributes to overall system performance by putting less strain on shafts, bearings and stands.

Precise Control at Low Pressure

Nexen STB/STC tension clutches and brakes are pneumatically actuated using a piston /diaphragm combination and are designed for lighter duty than the XTBs.

- No o-rings to stick, no seals to drag.
- Nothing to hinder precise control of torque at low operating pressures – fine control of torque to the end of roll

- 500:1 torque control range for precise control of web processes
- Three piston sets, each with different thrust, for even greater torque range flexibility
- Through-shaft mounting for easy installation
- Compact size
- No rotary air unions required – eliminates “gun drilling” shafts

Easy to Service

The lower weight of Nexen tension brakes and clutches make them easier to install and maintain. You don't need to adjust pad overhang or shim the pads.

Caliper friction pads are quickly replaced by simply releasing a spring-loaded retaining pin. There are no screws or cotter keys to remove. You change the friction pad without removing the caliper from the brake. The pads are completely interchangeable, one size fits all.

The Nexen XTB disc is also easily replaceable without removing the entire brake, simply pull the disc from the shaft. The hub remains locked on the shaft, so the new disc can be reinstalled in precisely the same position.

TENSION METERS AND AMPLIFIERS

Tension Meter

Often you need to only measure the tension in a web, not control it. Nexen has a variety of solutions to meet these needs.

Tension Meter

Nexen tension meters precisely measure web tensions with a digital tension display on the front panel. Their 0-10 VDC or 4-20 mA analog output is also well suited as a proportional tension data signal to process controllers, data loggers and variable-speed motor controls.

You can also use one of the sensors for narrow webs, single strands of wire, or any other narrow material where tension will not vary from one side to the other.

Nexen tension meters are also

useful as a tension readout-only device to measure intermediate-zone tension.

Tension Amplifiers

Nexen tension amplifiers interface with load cell or strain gauge sensors. They provide an excitation signal to the sensors and separately amplify the return signal from each sensor before combining them to provide a signal proportional to the total tension.

Tension amplifiers are ideal for accurate, low-cost tension measurement of a web process

interfaced with machine controls such as data loggers, process controllers, drive controls, host computers and other applications requiring a precise tension interface.

Tension Amplifiers Offer:

- Low cost signal conditioning for LVDT or strain gauge tension sensors
- Wide tension range for flexible installation
- Ideal for use with machine controls where local readout is not required
- Includes both 0-10 VDC and 4-20 mA outputs

WEB GUIDING SYSTEMS

Controlled lateral alignment of the web is absolutely essential to providing high quality product and reducing scrap and waste. Nexen web guiding systems are designed, tested and proven to give you that alignment

Web Guiding Applications

Unwind Guiding (See Figure 1)

As material is unwound and fed into a machine, it must be properly aligned with the process to be performed upon it. Unwind guiding is accomplished by sensing

Figure 1

the web as it enters the machine. The sensor is mounted as part of the main machine frame and placed so that its center is located at the desired position of the web. The controller directs movement of the actuator, which moves the roll stand laterally across the machine to bring the edge of the roll into the center of the sensor.

Intermediate Guiding

This method is normally used in the intermediate zone to make minor corrections in position. The steering rolls pivot, directing the web to the left or right to bring it into center position within the sensor.

Figure 2

Displacement Guides (See Figure 2)

Displacement guides consist of a pair of pivoting rollers with a pair of stationary idler rollers, one lead-in roller before the guide and a lead-out roller after the guide. This type of guide induces pure, out-of-plane twisting of the web, which is gentler on a web than a steering guide. Much shorter free spans are required before and after guiding when compared to a steering guide. Displacement guides are often used on printing presses and other applications where space is at a premium.

Figure 3

Windup Guiding (See Figure 3)

The position of the web is monitored by a sensor mounted on the moveable windup roll stand, positioned before the last roll on the machine. As the web shifts laterally, the controller signals the actuator to move the windup roll into line with the web edge.

Chase Guiding

Chase guiding is a technique used to align the edge of two or more webs or to align a process to a web. The sensor is moved by the actuator to "chase" the edge of the web.

In the case of aligning several web edges, the sensors for the second and subsequent webs are aligned with the chase sensor and move in tandem with it. This moves the target or center of the sensor for all subsequent webs, which in turn causes the guides to align their webs to the target.

To align the process to the web, the sensor is mounted to the moveable process component. The actuator then moves the component, causing the sensor to chase the web edge or printed line.

GUIDE SENSING OPTIONS

WEB GUIDE SENSORS AND CONTROLLERS

Position Control Configurations

Ultrasonic Web Guide Sensor

LED Infrared Web Guide Sensor

Edge Position Control

One edge of the material is aligned with the process at all times. The position of this edge remains constant throughout all processes. The opposite edge is permitted to run free and is eventually edge-trimmed to meet the final specified web width.

Center Position Control

This technique requires one sensor on each side of the web. The objective is to maintain the center of the web on the mean centerline of the machine. If the web varies in width, center position control will maintain an equal edge trim on each side of the web, to be removed later in the processing.

Line Follower Control

Line follower control is always employed for previously processed materials, using a sensor to follow a line or the edge of a pattern of print or coating material previously laid down on the web.

Ultrasonic Sensors

Ultrasonic sensors are used particularly for edge or center control of photosensitive materials such as photographic film and print paper, and with transparent or translucent films bearing a coating, printing or an opaque surface near the edge. A high frequency sound is transmitted across an air gap to a receiving unit. Interruption of the signal is interpreted as a change in position of the web material. They can also be used with opaque materials.

Infrared Sensors

A pulsed LED transmits an infrared signal across the web edge to a light sensitive sensor; edge position of the material is

determined from the amount of light sensed at the receiving unit. Infrared sensors can also be configured in pairs for center position control. The infrared signal is not affected by ambient light and is useful for processing of certain photosensitive materials. Infrared sensors are used for opaque materials only.

Line Follower Sensors

A line following sensor bounces light off a web as it passes around a transport roll in the machine. It is received by a sensing element contained in the same housing. This type of sensor is normally used to follow a printed line or the edge of a printed pattern on the web.

Web Guide Controller Self Contained

Web Guide Controller

Web Guide Controllers

A Nexen web guide controller receives signals from a web position sensor and translates them into control signals for web position drive motors. With the appropriate sensor, they offer control accuracy to within ± 0.004 inches (± 0.01 mm) of an edge or centerline position.

The purpose of the controller is to provide automatic positioning of the web in relation to the sensor. Web position information from the sensor is fed to the web guide controller. The controller's motor control drives an electrical linear actuator to correct the web position by adjusting the roll stand or guide roll mechanism.

AUXILIARY PRODUCTS

Splice Detector System

Splice Detector

System Controller

The Splice Detector System is a visible light system used to sense splices or double thicknesses in translucent materials. It provides both a visual indication and a relay signal at each splice.

This system is ideally suited for use where high nipping pressure in a machine must be momentarily relaxed to allow a splice to pass through without damaging the web, printing blanket or other components.

This system typically does not require operator intervention. A change in web thickness of more than three seconds duration will cause the system's controller to recalibrate to the new web thickness.

Paper Checker System

Paper Checker

The Paper Checker System detects web breaks and splices on web machines.

This system makes use of an ultrasonic sensor to prevent the false triggering that can result from the presence of print or

other patterns on the web material and for use with photo sensitive materials. Each break or splice is indicated by a separate relay signal and front panel indicator lights.

This Nexen Paper Checker System can be used on transparent to fully opaque webs and with laminates of paper, film and foil. It handles web speeds from 30 to more than 3000 feet per minute, (10 to 1000 meters per minute).

NOTE: Dynamic torque is approximately 85% of static torque.

MICRO FRICTION CLUTCH

The Micro Friction Clutch provides high performance in a small package:

- ▶ Static Torque capacity up to 18 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 3600 rpm
- ▶ Transmitted Horsepower values from 0.06 to 0.50
- ▶ Thermal Horsepower rating of 0.06 @ 1800 rpm
- ▶ Heat Sink capacity of 1900 Ft. Lbs.

This Pilot Mount clutch mounts easily and comes with:

- ▶ 0.375 inch **Standard Bore**
- ▶ 5 inch hose with .190-32 by .125 NPT included.

CLUTCHES

“Air Champ”

BANTAM WEIGHT MODEL BW FRICTION CLUTCH

The BW Friction Clutch provides excellent performance:

- ▶ Static Torque capacity up to 100 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 3600 rpm
- ▶ Transmitted Horsepower values from 0.05 to 1.00
- ▶ Thermal Horsepower rating of 0.13 @ 1800 rpm
- ▶ Heat Sink capacity of 5650 Ft. Lbs.
- ▶ **Corrosion-Resistant** Model available for damp environments

This clutch is thru-shaft mounted to provide design versatility in **5 Models:**

- ▶ **4 Sheave Mount** units provide 1-“3V” or 1-“A” Groove options
- ▶ **5 Pilot Mount** units with different standard bore sizes
- ▶ **Standard Bore** sizes of 0.500 and 0.625 inches
- ▶ Customize the bore to your shaft diameter with a **Bushing** or **Coupling Half**
- ▶ Tapped holes provided for easy mounting in applications with pulleys, sprockets or gears
- ▶ 8.25 inch hose included
- ▶ **BW** is equipped with Thrust Bearings and a Single Key Splined Hub.
- ▶ **B-275** is equipped with Sealed, Radial Bearings and a Multi-tooth Splined Hub.

Pilot w/Coupling Half	Select a Pilot Mount and a Coupling Half to achieve this style of mount.				

For Inertia Values of components, see page 359.
Keys are included. Required shaft insertion into clutch hub = minimum of 1.50 inches from Pilot side.

▶ **BUSHING OPTIONS (FOR 0.625 BORE CLUTCHES ONLY)**

Bushings fit within the bore of the clutch, reducing the bore to the amount indicated.

Product Number	Reduces Clutch Bore Size to (In)	Shipping Wt. (Lbs)
800200	0.500	1
800900	No Bore/Custom machines	1

▶ **COUPLING HALF OPTIONS**

A Coupling Half is used for in-line applications. To achieve a Pilot Mount with Coupling Half mounting configuration:

1. Select a Pilot Mount Clutch from above;
2. Select a Coupling Half from the chart below which fits your shaft requirements;
3. Order Clutch and Coupling Half separately.

Product Number	Bore Size (In)	Key Size (sq)	Shipping Wt. (Lbs)
800300	0.500	0.125	1
800307	0.500	0.125	1 ^①
800400	0.625	0.188	1
800500	0.750	0.188	1

^①Nickle Plated

▶ **PULLEYS, SPROCKETS, GEARS**

Tapped holes are provided for ease of mounting. Nexen does not furnish these items. For minimum sprocket requirements, see page 369.

▶ **TORQUE VS. AIR PRESSURE**

NOTE: Dynamic torque is approximately 85% of static torque.

CLUTCHES

“Air Champ”

**FRICITION CLUTCH MODELS
F-450 & L-600**

- ▶ Static Torque capacity up to:
F-450/140 In. Lbs. @ 80 psi
L-600/370 In. Lbs. @ 80 psi
 - ▶ Maximum Operating Speed up to 3600 rpm
 - ▶ Transmitted Horsepower values from:
F-450/0.125 to 5.00
L-600/0.25 to 10.00
 - ▶ Thermal Horsepower rating of:
F-450/0.30 @ 3600 rpm
L-600/0.75 @ 3600 rpm
 - ▶ Heat Sink capacity of:
F-450/30,000 Ft. Lbs.
L-600/60,000 Ft. Lbs.
- 8 F-450 & 8 L-600 Models** offer design flexibility:
- ▶ **Sheave Mount Units:**
F-450/4 in 1-“3V” or 1-“A” Groove styles, each in 2 sizes
L-600/6, 4 sizes of 2-“3V” and 2 sizes of 2-“A”
 - ▶ **2 Pilot Mount** units with different standard bore sizes
 - ▶ **2 Rewind Clutches** Half-Torque, Precise Interface. Standard or LOCO facing, 0.875 bore size.
 - ▶ **Standard Bore Sizes:**
F-450/0.750 and 0.875 inches
L-600/1.00 and 1.125 inches
 - ▶ Customize the bore to your shaft diameter with a **Bushing** or **Coupling Half**
 - ▶ **Includes:**
F-450/Air Inlet Adapter and 8.25 in. hose.
L-600/8.25 inch hose.
 - ▶ **1 802864 & 802865**
Precision Interface Clutches.
For reduced pulsation in tension control applications.

Both	Pilot w/Coupling Half	Select a Pilot Mount and a Coupling Half to achieve this style of mount.				

For Inertia Values of components, see page 359. Keys are included. Required shaft insertion into clutch hub = minimum of F-450/2.00 inches, L-600/2.50 inches from Pilot side.

▶ **BUSHING OPTIONS**

(FOR 0.875 & 1.125 BORE CLUTCHES ONLY)
Bushings fit within the bore of the existing clutch, reducing the bore to the amount indicated.

Bore Size	Product Number	Reduces Clutch Bore Size to (In)	Shipping Wt. (Lbs)
0.875	827200	0.500	1
0.875	802500	0.625	1
0.875	802600	0.750	1
0.875	803100	No Bore/Custom machines	1
1.125	805100	0.625	1
1.125	804600	0.750	1
1.125	804700	0.875	1
1.125	804800	1.000	1
1.125	805000	No Bore/Custom machines	1

▶ **PULLEYS, SPROCKETS AND GEARS**

These can be attached to the clutch for offset shaft applications. Tapped holes are provided for ease of mounting. Nexen does not furnish these items. For minimum sprocket requirements, see page 369.

▶ **COUPLING HALF OPTIONS**

(SEE PAGE 369 FOR COUPLING SPECIFICATIONS)

A Coupling Half is used for in-line applications. To achieve a Pilot Mount with Coupling Half mounting configuration:

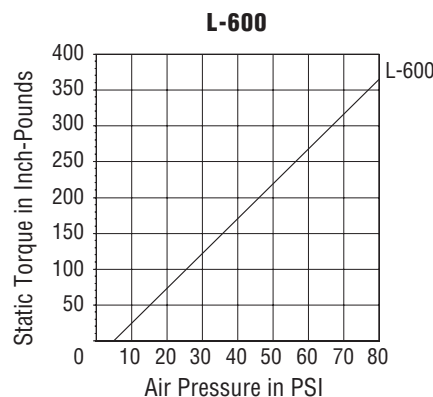

1. Select a Pilot Mount Clutch;
2. Order Clutch and Coupling Half separately.
3. Coupling Half is less taper lock bushing. Use Dodge Taper Lock® #1008/F-450, #1215/L-600, (0.500 to 1.000/F-450, 0.500 to 1.125/L-600, inch bore range). Customer furnished.

Model	Product Number	Maximum Bore Size (In)	Shipping Wt. (Lbs)
F-450	802700	1.000	3
L-600	804900	1.125	6

4. Select a Shaft Extension when the driving shaft is smaller in diameter and shorter than the length of the clutch. The Shaft Extension is the same length as the clutch and engages with the key on the pilot end. Extensions fit the driving shaft diameter.

Only for Bore Size	Product Number	Driving Shaft DIA.	Shipping Wt. (Lbs)
0.875	802800	0.500	1
0.875	803000	0.625	1

METRIC SERIES FRICTION CLUTCHES

The Metric Model Friction Clutch Series provides:

- ▶ Static Torque capacity up to 330 Nm
- ▶ Maximum Operating Speed up to 3600 rpm
- ▶ Heat Sink capacity of 312,000 Joules.

This clutch comes in **5 Models** for design flexibility:

- ▶ **6 Pilot Mount** units with different standard bore sizes
- ▶ **6 Standard Bore** sizes ranging from 15 to 50 millimeters
- ▶ **4 Minimum Bore** sizes ranging from 0 to 19 millimeters—you machine and assemble
- ▶ **BW** is equipped with Thrust Bearings and a Single Key Splined Hub.
- ▶ **B-275** is equipped with Sealed, Radial Bearings and a Multi-tooth, Involute Spline.

▶ **METRIC SERIES FRICTION CLUTCHES, PILOT MOUNT ONLY**
Standard Bore Clutch:

Model	Product Number	Speeds Up to RPM	Bore (mm)	Key Size	MIN. Shaft Insertion into Hub from Pilot Side	Heat Sink Capacity (Joules)	Shipping Wt. (kg)
BW	950700	3600	15	5 x 5	38	7660	1,8
B-275	950705	3600	15	5 x 5	38	7660	1,8
F-450	950050	3600	20	6 x 6	51	41000	4,7
L-600	950150	3600	25	7 x 8	64	81000	7,8
M-800	950250	1800	40	8 x 12	95	149000	17
H-1000	950350	1800	50	9 x 14	102	312000	28

Keys are included.

Minimum Bore Clutch:

Minimum bore clutches are supplied unassembled with machinable hubs.

Model	Product Number	Speeds up to RPM	MIN. Bore (mm)	MIN. Shaft Insertion into Hub from Pilot Side	Heat Sink Capacity (Joules)	Shipping Wt. (kg)
F-450	950061	3600	0	51	41000	4,7
L-600	950161	3600	13	64	81000	7,8

CLUTCHES

“Air Champ”

XHW, EXTRA HEAVY-WEIGHT MODEL FRICTION CLUTCH

The XHW Friction Clutch provides:

- ▶ Static Torque capacity up to 5000 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 1200 rpm
- ▶ Transmitted Horsepower values from 5.00 to 50.00
- ▶ Thermal Horsepower rating of 2.25 @ 1200 rpm
- ▶ Heat Sink capacity of 200,000 Ft. Lbs.

2 Models offer design flexibility:

- ▶ **1 Sheave Mount** unit in a 5-“5V” Groove design
- ▶ **1 Pilot Mount** unit
- ▶ **Standard Bore** size of 2.375 inches
- ▶ Customize the bore to your shaft diameter with a **Bushing** or **Coupling Half**
- ▶ 8.25 inch hose included.

▶ **TORQUE VS. AIR PRESSURE**

NOTE: Dynamic torque is approximately 85% of static torque.

▶ **XHW MODEL CLUTCH**

Clutch Style	Product Number	Sheave Diameter	Bore (In)	Key Size (sq)	Shipping Wt. (Lbs)
Pilot Mount	811100	--	2.375	0.625	110
Sheave Mount, 5-“5V”	810900	8.00 OD	2.375	0.625	110
Pilot w/Coupling Half	Select a Pilot Mount and a Coupling Half to achieve this style of mount.				

For Inertia Values of components, see page 359.
Keys are included. Required shaft insertion into clutch hub = minimum of 5.625 inches from Pilot side.

▶ **BUSHING OPTIONS (FOR 2.375 BORE CLUTCHES ONLY)**

Bushings fit within the bore of the existing clutch, reducing it to the amount indicated.

Product Number	Reduces Clutch Bore Size to (In)	Shipping Wt. (Lbs)
811800	1.625	4
811900	1.688	4
811200	1.750	4
811300	1.875	4
811400	1.938	4
812200	2.125	4
811500	2.188	4
811600	2.250	4
812000	No Bore/Customer machines	4

▶ **COUPLING HALF OPTIONS, SEE PAGE 369 FOR COUPLING SPECIFICATIONS**

A Coupling Half used for in-line applications. To achieve a Pilot Mount with Coupling Half mounting configuration:

1. Select a Pilot Mount Clutch from above;
2. Order Clutch and Coupling Half separately.
3. Coupling Half is less taper lock bushing. Use Dodge Taper Lock® #3030 (1.500–3.000 inch bore range). Customer furnished.

Product Number	Maximum Bore Size (In)	Shipping Wt. (Lbs)
811700	3.000	63

▶ **PULLEYS, SPROCKETS AND GEARS**

These can be attached to the clutch for offset shaft applications. Tapped holes are provided for ease of mounting. Nexen does not furnish these items. For minimum sprocket requirements, see page 369.

IMPORTANT NOTES:

1. For static torque ratings at different air pressures, refer to individual models to ensure conformity.
2. For operating speeds over 1800 rpm, refer to individual models or consult Nexen to ensure conformity.
3. Limited to peak thermal input rates of .9 HP_T per square inch of interface area.
4. Bars equal PSI x 0.0689.

CLUTCHES

**DPC SERIES
DUAL PLATE CLUTCHES**

This Series, specified by component, allows you to custom design for specific application requirements:

- ▶ Static Torque capacity up to 36,000 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 2200 rpm
- ▶ Thermal Horsepower values of 3.3 to 9.0 at rated speeds
- ▶ Components combine in a variety of options to fit almost any need
- ▶ Choose from Thru-Shaft or Shaft-End Mounting
- ▶ Choose between Sheave or Pilot style configurations
- ▶ Rotary Air Union is included with each Clutch Assembly.

With the DPC Model Series, tough applications are made easy. Each of the 4 Models and their many options are detailed on the next few pages.

The DPC Series Clutches are designed for applications involving high inertia starts and stops. The Peak Input Rate may be the limiting factor in high inertia starts or stops, even though the Heat Sink Capacity is sufficient. The Peak Input Rate capacity is the rate at which the clutch absorbs heat at the friction interface during the acceleration period, while the interfaces are slipping or until the load and clutch are operating at the same speed. See page 368 in the Engineering Data Section for information explaining how to calculate the Peak Input Rate and how to avoid potential problems.

▶ **HOW TO SPECIFY AND ORDER DPC CLUTCHES:**

1. Determine if you require Shaft-End Mounting or Thru-Shaft Mounting;
2. Determine if you require a Pilot Mount or Sheave Mount configuration;
3. Determine which bore size you will need;
4. Order each component individually, based upon your requirements.

▶ **MOTOR FRAME, SHAFT DIAMETERS & LENGTHS**

This chart can be used for quick selection of many criteria. If you are using a standard motor frame and are within the rpm and horsepower requirements, the chart indicates a clutch and shaft to use. If you know the rpm, horsepower and desired clutch, the chart will indicate a standard motor frame and shaft to use.

HORSEPOWER	600RPM	900RPM	1200RPM	1800RPM

▶ **CLUTCH APPLICATION DATA**

MODEL	DPC-9T	DPC-11T
Peak Input Rate	50 hp	84 hp
Effective Friction Areas	55 in ²	93 in ²
MODEL	DPC-13T	DPC-15T
Peak Input Rate	131 hp	149 hp
Effective Friction Areas	145 in ²	166 in ²

▶ **TORQUE VS. AIR PRESSURE**

NOTE: Dynamic torque is approximately 85% of static torque.

▶ **CLUTCH ASSEMBLY**

▶ **SHAFT-END MOUNTING**

AIR INLET CONNECTION:

1. Attach the End Cap to the end of the Hub with three cap screws.
2. Install the Rotary Air union and elbow fittings in the End Cap.
3. Connect the cylinder hoses to the elbow fittings.
4. Use the flexible hose (supplied) to connect air supply to the Rotary Air Union (do not use rigid pipe or tubing for this connection).
5. Make sure that of these hoses do not interfere with the rotating parts of the unit.

▶ **THRU-SHAFT MOUNTING**

AIR INLET CONNECTION:

1. Drill a 0.375 inch diameter hole in the center of the shaft, long enough to reach the air outlets.
2. Tap drill the air outlet holes straight through the shaft, intersecting the 0.375 diameter hole, and tap the 0.125-27 NPT on both ends.
3. The air outlet holes should be located 0.375 of an inch from the end of the Hub.
4. Tap a .625-18 inch hole, 0.625 inches deep in the end of the shaft for the Rotary Air Union.
5. Install the two elbow fittings in the air outlet holes and connect the cylinder hoses to them.
6. Install the Rotary Air Union in the end of the shaft and use the flexible hose (supplied) to connect the air supply to the shaft (do not use rigid pipe or tubing for this connection).

▶ **DPC CLUTCHES**

Shown are the typical components of a DPC Clutch:

- ▶ The Clutch Assembly comes with the Rotary Air Union
- ▶ Rotary Air Union, supplied with each clutch, is required for both Shaft-End and Thru Shaft mounting
- ▶ The optional End Cap is only required for Shaft-End Mounting
- ▶ The customer supplied QD Bushing is required for both Shaft-End and Thru-Shaft Mounting
- ▶ The Support Bushing is used whenever the shaft size is less than the maximum clutch bore.

▶ **MOUNTING/AIR INLET CONNECTIONS**

DPC Clutches are very flexible units because of their many mounting possibilities. Four of the more common applications are shown at left. Also refer to the Air Inlet Connection information (at left) for each mounting style.

CLUTCHES

“Air Champ”

**DPC-9T MODEL
DUAL PLATE CLUTCH**

This **Model**, specified by component, allows you to custom design for specific application requirements:

- ▶ Static Torque capacity up to 5500 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 2200 rpm
- ▶ Thermal Horsepower ratings up to 3.3 @ 2200 rpm
- ▶ **Pilot Mount** clutch assembly with standard support bushing bore of 2.375 inches
- ▶ **Sheave** options: 5-“5V” or 4-“C” Groove
- ▶ Support Bushings provide 6 additional bore sizes ranging from 1.87 to 2.125 inches
- ▶ Heat Sink capacity of 220,000 Ft. Lbs.
- ▶ 8.25 inch hose included
- ▶ Rotary Air Union is supplied with the clutch assembly

Review the information on this and the next page to determine the required components to build your clutch.

REQUIRED COMPONENTS:

Shaft-End Mounting	Thru-Shaft Mounting
1 Clutch Assembly	1 Clutch Assembly
1 End Cap	1 QD Bushing
1 QD Bushing	
<i>(QD Bushing customer furnished)</i>	

OPTIONAL COMPONENTS:

Shaft-End Mounting	Thru-Shaft Mounting
1 Support Bushing	1 Support Bushing
1 Sheave	1 Sheave

DUAL-FACED FRICTION CLUTCH MODELS DFC-1650 & DFC-2200

The DFC-1650 and DFC-2200 are two models of self contained, dual-faced, air-engaged friction clutches with a bearing mounted plate for mounting pulleys or sprockets. The two models sizes fit shafts up to 3.375", and are designed for shaft-end mounts only.

The DFC Clutches operate with an air-pressurized piston moving axially to compress the friction facing against the inside of a dual-faced rotor, which is splined to a shaft-mounted hub. The rotor is locked with the pilot plate, under friction, to transmit power from the driving shaft to the driven pulley or sprocket.

- ▶ Static Torque capacity up to 66,800 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 1200 rpm
- ▶ Thermal Horsepower rating of 10.0 @ 900 rpm
- ▶ Heat Sink capacity of 1,460,000 Ft. Lbs.

This clutch is shaft-end mounted to provide design versatility in **2 Models:**

- ▶ **8 Sheaves** provide 4-“5V” or 4-“8V” Groove options
- ▶ **Standard Bore** size of 3.375 inches
- ▶ Lower cost O-ring design
- ▶ Superior friction facing life
- ▶ Excellent bearing life
- ▶ Clutch envelope is within the motor diameter
- ▶ For up to 250 horsepower drives

▶ **DFC MODEL CLUTCHES**

Model	Clutch Style	Product Number	Sheave Diameter	Bore (In)	Shipping Wt. (Lbs)

CLUTCHES

HEAVY DUTY CLUTCH & BRAKE ELEMENTS

DFE & QFE MODEL SERIES

This **16 Model** Series of air-actuated **Dual Faced** and **Quad Faced Elements** are designed for heavy duty industrial applications requiring high torque and low inertia:

- ▶ Static Torque ratings up to 302,000 In. Lbs. @ 80 psi (see chart page 60)
- ▶ Maximum Operating Speed up to 1600 rpm
- ▶ Thermal Horsepower values up to 14.7 @ 1600 rpm
- ▶ Bore range up to 6.500 inches
- ▶ Thru-Shaft or Shaft-End Mount Brake
- ▶ Horizontal Shaft-End mounted Clutch Element mounts to a customer supplied flywheel, gear or pulley
- ▶ Dual Faced Elements have single disc assemblies, Quad Faced Elements have double disc assemblies
- ▶ Available with either Standard or High coefficient friction linings
- ▶ Single or Double Disc Assemblies available in 4 disc sizes
- ▶ Rugged design ensures long product life
- ▶ Sealed O-ring piston & cylinder design reduces maintenance costs
- ▶ Air Union Bracket Assembly includes flexible hose.

Manufactured in the U.S.A. under license of Coremo Ocemea - Italy

With this Heavy Duty Model Series, tough applications are made easy. Each of the 16 Models are detailed on the next few pages.

▶ **PEAK INPUT RATE**

The DFE and QFE Series of Clutches and Brakes are designed for applications requiring high torque and low inertia. The peak input rate may be the limiting factor in high inertia starts or stops, even though the Heat Sink Capacity is efficient.

The peak input rate capacity is the rate at which the clutch absorbs heat at the friction interface during the acceleration period while interfaces are slipping, or until the load and the clutch are operating at the same speed. See page 368 the Engineering Data Section for information explaining how to calculate the Peak Input Rate and how to avoid potential problems.

▶ **HEAT SINK CAPACITIES & PEAK INPUT RATE**

Model	Heat Sink Capacity (Ft Lbs)	Peak Input Rate (HP)	Effective Interface Areas
DFE 1150-S/H	390,000	105	117 in ²
DFE 1650-S/H	870,000	204	227 in ²

QFE 1150-S/H	780,000	210	234 in ²
QFE 1650-S/H	1,740,000	408	454 in ²
QFE 2200-S/H	2,374,000	594	660 in ²
QFE 2500-S/H	2,920,000	727	808 in ²

▶ **CONTINUOUS RATED THERMAL HORSEPOWER DISSIPATION VS. RPM**

▶ CLUTCH ELEMENT MOUNTED TO BEARING SUPPORTED PULLEY

▶ CLUTCH AIR CONNECTION

▶ WHEN ELEMENT IS USED AS A CLUTCH:

Element must be Shaft-End Mounted in a horizontal position.

The housing is flange mounted to a bearing supported component (flywheel, gear, pulley).

The Hub is keyed to the shaft.

Air is supplied through a Rotary Air Union and flexible hoses.

NOTE: Not suitable for Thru-Shaft mounting.

Clutch Air Connection:

Attach the Rotary Air Union Bracket to the cylinder with four cap screws.

Install a flexible hose in the Rotary Air Union and in the Air Union Bracket.

Install elbow fittings in the cylinder and Air Union Bracket.

Connect the cylinder hoses to the fittings.

Do not use rigid pipe or tubing for these connections.

▶ SHAFT-END MOUNTED BRAKE ELEMENT

▶ WHEN ELEMENT IS USED AS A BRAKE:

Element must be Shaft-End Mounted in a horizontal position.

The housing is flange mounted to the machine frame.

The Hub is keyed to the shaft.

Air is supplied directly at the cylinder air inlets.

Brake Air Connection:

Connect the air supply directly to the two air ports, located 180 degrees apart in the cylinder.

See page 150-161 for Spring Engaged Brake.

NOTE: DFE & QFE units are intended for horizontal mounting only.

CLUTCHES

“Air Champ”

DFE MODEL CLUTCH & BRAKE ELEMENTS

This **8 Model** Series of air-actuated Dual Faced Elements are designed for heavy-duty industrial applications requiring high torque and low inertia:

- ▶ Static Torque ratings up to 151,000 In. Lbs. @ 80 psi (see chart)
- ▶ Maximum Operating Speed up to 1600 rpm
- ▶ Thermal Horsepower values up to 10.9 @ 900 rpm
- ▶ Bore range up to 6.500 inches
- ▶ Shaft-End Mount Clutch
- ▶ Thru-Shaft or Shaft-End Mount Brake
- ▶ Horizontal Shaft-End mounted Clutch Element mounts to a customer supplied flywheel, gear or pulley
- ▶ Dual Faced Elements have single disc assemblies
- ▶ Available with either Standard or High coefficient friction linings
- ▶ Single Disc Assemblies available in 4 Disc sizes
- ▶ Rugged design ensures long product life
- ▶ Sealed O-ring piston and cylinder design reduces maintenance costs
- ▶ Air Union Bracket Assembly includes flexible hose.

Manufactured in the U.S.A. under license of Coremo Ocemea - Italy

NOTE: Dynamic torque is approximately 85% of static torque.

▶ **HOW TO SPECIFY AND ORDER DFE CLUTCH & BRAKE ELEMENTS:**

1. Determine which bore size you will need;
2. If you require a bore size other than the standard Hub bore, you can either order this special size from Nexen or machine it yourself;
3. Order the matching Air Union Bracket Assembly for Shaft-End mounting applications.

▸ HUB BORE INFORMATION

All standard Hubs are furnished in the bore listed in dimension “U” and without keyway or set screw. The Hub bore can be increased to a size equal to the maximum diameter indicated in the table. If you need to increase the bore size of the Hub, you have two options:

1. Nexen can supply you with a specified bore and matching keyway at your request for an extra charge.
2. You can machine your own bore and keyway, with the limits listed in the table.

The following table indicates bore sizes and corresponding key and set screw sizes.

Bore Size	Key Size (SQ)	Set Screw Size
1.000-1.250	0.250	0.312-18
1.312-1.375	0.312	0.375-16

CLUTCHES

“Air Champ”

**QFE MODEL
CLUTCH & BRAKE ELEMENTS**

This **8 Model** Series of air-actuated Quad Faced Elements are designed for heavy-duty industrial applications requiring high torque and low inertia:

- ▶ Static Torque ratings up to 302,000 In. Lbs. @ 80 psi (see chart)
- ▶ Maximum Operating Speed up to 1600 rpm
- ▶ Thermal Horsepower values up to 14.7 @ 900 rpm
- ▶ Bore range up to 6.500 inches
- ▶ Shaft-End Mount Clutch
- ▶ Thru-Shaft or Shaft-End Mount Brake
- ▶ Horizontal Shaft-End mounted Clutch Element mounts to a customer supplied flywheel, gear or pulley
- ▶ Quad Faced Elements have single disc assemblies
- ▶ Available with either Standard or High coefficient friction linings
- ▶ Double Disc Assemblies available in 4 Disc sizes
- ▶ Rugged design ensures long product life
- ▶ Sealed O-ring piston and cylinder design reduced maintenance costs
- ▶ Air Union Bracket Assembly includes flexible hose.

Manufactured in the U.S.A. under license of Coremo Ocemea - Italy

NOTE: Dynamic torque is approximately 85% of static torque.

▶ **HOW TO SPECIFY AND ORDER QFE CLUTCH & BRAKE ELEMENTS:**

1. Determine which bore size you will need;
2. If you require a bore size other than the standard Hub bore, you can either order this special size from Nexen or machine it yourself;
3. Order the matching Air Union Bracket Assembly for Shaft-End mounting applications.

CLUTCHES

“Air Champ”

LSCC STRAIGHT BORE CONVEYOR CLUTCHES

Nexen’s air-engaged, straight-bore series of conveyor clutches offer high torque in a small package. The LSCC line is ideal for soft starts on accumulating, chain-driven live-roller, or in-line conveyor applications. With a maximum torque rating of 452 Nm [4000 in-lb] and a bore range from 12 to 38 mm [0.500-1.500 in], these products can outperform the competition at a lower cost. Nexen’s conveyor lines comes standard with a pilot designed for easy sprocket mounting or can be configured for a variety of mounting applications (double-single sprocket, timing belt sprocket, v-belt sheave, plate, etc.).

- ▶ High torque: 452 Nm [4000 in-lb] at 5.5 bar [80 psi]
- ▶ Bore range: 12-38 mm [0.500-1.500 in]
- ▶ Through-shaft design with three set screws for easy mounting
- ▶ Variable mounting configurations: plate or double-single sprocket, timing belt sprocket, plate, or sheave
- ▶ Open design, improved airflow, high thermal horsepower
- ▶ Internal spline drive for trouble free disengagement performance
- ▶ Shielded ball bearings for low disengagement drag
-sealed bearings also available
- ▶ No rotary air union required
- ▶ Compact size
- ▶ Spring biased for complete disengagement
- ▶ Field repairable o-rings, facings and springs

CLUTCHES

“Air Champ”

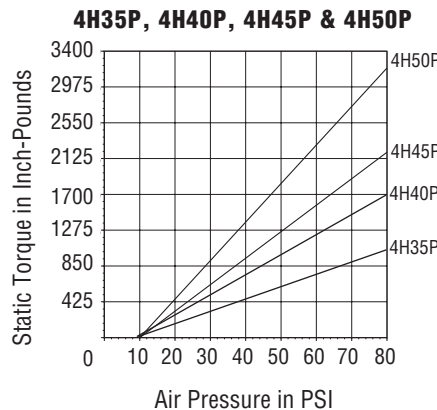

4HP SERIES, MULTIPLE DISC CLUTCHES

The 4HP Series provides:

- ▶ Static Torque up to 10,000 In. Lbs. @ 80 psi
 - ▶ Maximum Operating Speed up to 1800 rpm
 - ▶ **12 Bore** sizes ranging from 0.750 to 2.188 inches
 - ▶ For in-line applications to accommodate misalignment, we recommend use of Nexen Single and Double Flexible Couplings
- 7 Models** offer design flexibility:
- ▶ Clutch and Driving Shell as one unit
 - ▶ 3 or 4 Friction Disc Packs provide High Torque
 - ▶ **Pilot Mount** design with tapped mounting holes
 - ▶ Thru-shaft mounting design uses a full-length keyway
 - ▶ Ability to mount a pulley, sprocket, gear or Nexen Flexible Coupling

CAUTION! Do not use these clutches in applications where soft starts, sustained slipping or high cyclic performance is required. Such applications are best handled by standard “Air Champ” Clutches, Brakes or Clutch-Brakes.

TORQUE VS. AIR PRESSURE

NOTE: Dynamic torque is approximately 85% of static torque.

920800	1.625	923800	2
920900	1.750	923900	4
921000	1.938	924000	5

ATTACHMENT OPTIONS

Flexible Coupling Assemblies

Flexible Coupling Assemblies are required for in-line coupling applications and are available in single or double flex designs to provide **high misalignment capabilities with high torque**. Turn to pages 66 and 67 for Flexible Coupling details. For quick selection of Flexible Couplings, refer to the chart above.

Pulleys, Sprockets, Gears

These can be attached to the clutch for off set shaft applications. Tapped holes are provided for ease of mounting. Nexen does not furnish these items. For minimum sprocket requirements, see pages 369.

Study the Clutch Application Data, Torque Charts and RPM/Air Pressure information for these clutches carefully to ensure you have selected the proper 4HP Model for your requirements. If not properly used, failure or poor performance can occur. Please consult Nexen if you are unsure of your applications suitability.

Shown are maximum rpm values (based on 10,000 hours of bearing life) for various air pressures at which the 4HP Clutch Models can be run. For any other rpm at any other air pressure, please consult Nexen

SINGLE AND DOUBLE FLEXIBLE COUPLING ASSEMBLIES

Both Single and Double Flexible Couplings are available for the 4HP Multiple Disc Clutch. See the following pages for details.

CLUTCHES

“Air Champ”

4HP CLUTCH FLEXIBLE COUPLING ASSEMBLIES

Couple your shaft to a 4HP Multiple Disc Clutch with a Flexible Coupling Assembly. There are 14 Single Flex and 14 Double Flex Couplings, each designed to fit a specific 4HP Clutch. Whatever the design style, you'll get:

- ▶ High Misalignment Capability
 - ▶ Torque ratings up to 32,000 In. Lbs.
 - ▶ Nickel-plated surfaces
 - ▶ Coupling discs made from composite materials provide the benefits of both a steel disc and elastomeric coupling.
- Other benefits include:
- ▶ Corrosion resistant
 - ▶ Requires no lubrication
 - ▶ Coupling adds no backlash to the drive
 - ▶ Provides torsional stiffness
 - ▶ Dampens shock and vibration through the power train
 - ▶ Reverse Bushing Tapers for bushing installation from the inside of the coupling.

Find the Flexible Coupling that matches your clutch and your application specifications on this page.

4HP CLUTCH SINGLE & DOUBLE FLEXIBLE COUPLING SELECTION CHART

1. Determine the Clutch required for your application and find it on the chart below;
2. Find the matching Flexible Coupling Assembly at the top of the column;
3. Double check the Flexible Coupling specifications to ensure conformity with all mating components;
4. A Taper Lock Bushing is required, see chart below for recommended part. This is customer furnished.
5. Clutch and Flexible Coupling Assembly must be ordered separately.

SINGLE FLEXIBLE COUPLING MISALIGNMENT CAPACITY

Product Number	Angular (Degrees)	Axial (In)	Parallel (In)
909980	1.5	0.065	0.011
910080	1.5	0.070	0.012
910180	1.5	0.080	0.013
910280	1.5	0.090	0.014
910380	1.5	0.105	0.017
910480	1.5	0.120	0.019
910580	1.5	0.135	0.022

DOUBLE FLEXIBLE COUPLING MISALIGNMENT CAPACITY

Product Number	Angular (Degrees)	Axial (In)	Parallel (In)
909981	3.0	0.130	0.063
910081	3.0	0.140	0.078
910181	3.0	0.160	0.085
910281	3.0	0.180	0.091
910381	3.0	0.210	0.104
910481	3.0	0.240	0.117
910581	3.0	0.270	0.137

NOTE: If parallel, angular and axial misalignment are all required, be certain that the combined percentage of each does not exceed 100%. For instance, if 100% of the parallel misalignment rating is required, no angular or axial misalignment is allowed. If 50% of the parallel misalignment rating is required, only 50% of the angular misalignment OR 50% of the axial rating will be available.

Nexen Tension Control Clutches, The Ideal Selection.

TCC 7, TCC 10, TCC 14 & TCC 20

For nearly 50 years, Nexen has been providing tension control equipment for the paper, printing and converting industries; building clutches, brakes and controls for operations that manufacture and/or handle paper, foil, film, rubber, plastics and fabrics.

In fact, Nexen's very first pneumatic clutches were designed for the paper manufacturing industry in North America, to provide tension control for rewind and unwind stands.

Since then, Nexen has become a major supplier of all kinds of clutches to industry (and the world) at large. But our roots are still firmly anchored in the field of tension control.

Modular Construction

Nexen's innovative line of Modular Tension Control Clutches are designed to be the most flexible, maintenance-free pneumatic units available for continuous winding operations. Ruggedly built to endure the continuous drag and high heat load that tension control demands, yet extremely sensitive and responsive to a wide range of torque requirements.

Tailor-made design at off-rack prices..

Today's tension control operations may have standard horsepower requirements, but torque output needs that vary a great deal. For example, a web printing press may use a different grade and weight paper for each printing job—and the tension requirements for each roll of paper can vary considerably. The ideal tension control clutch is capable of handling all these changes. And, the ideal clutch is the Nexen Clutch.

Features

The Modular construction of Nexen TC Clutches lets a customer custom design a clutch that satisfies a variety of specific needs:

- A broad range of thermal horsepower and torque capacities.
- A full selection of Housing Assemblies with various caliper positions.
- Separate Caliper Assemblies.
- .20, .35 and .45 Coefficient Rated Friction Facings.
- Rotary Air Unions.

Design Versatility

Sprockets or pulleys are attached to the TCC Clutch housing pilot diameter. Torque output is varied by selecting a housing with the number of caliper positions that match the torque requirements to a particular rewind application.

Three friction coefficients are available in facings to further fine tune the performance characteristics of a TC Clutch.

The housing assembly and rotor assembly of the clutch both rotate. Calipers are attached to the clutch housing in equally spaced positions to maintain proper clutch balance.

Clutch housing product numbers are set up with the correct number of caliper positions for balance purposes.

The rotary air union, with dual output ports, is attached to the shaft for connecting the air supply to the calipers.

Torque ranges from a minimum of 8 inch pounds (0.90 Newton Meters) at 1 psi (7 kPa) per caliper set to a maximum of 10,400 inch pounds (1160 Newton Meters) at 80 psi. (550 kPa).

It can stand the heat...

The Nexen TC Units have excellent thermal capacity (required because of the constant drag on the friction facings). Capacities of maximum heat dissipation range from 4.5 to 16.5 thermal horsepower (3.4 to 12.3 Kilowatts). Since the clutch is air operated and air cooled, it does not require an expensive water cooling system.

It's practically care-free...

Only two parts of the TC Clutch will ever need replacing; the diaphragm in the caliper assemblies (virtually never) and the friction facing.

The diaphragms will last practically forever. However, the friction facings need replacing because of wear and the desire to change the coefficient of friction. All it takes is a wrench and screwdriver to remove four cap screws and two machine screws. The whole operation takes about 2 minutes per facing.

(Incidentally, Nexen's facings have been free of asbestos for over 20 years.)

Sensitive, accurate air control...

Each caliper assembly is constructed with a diaphragm instead of a piston/O-ring assembly. This provides a smoother, more sensitive response to the air pressure applied in response to signals from the control panel.

Internal springs return the piston to the disengaged position to guarantee clearance between the friction facing and the rotor when no air pressure is applied.

Air is supplied to the TC clutch calipers through a dual output rotary air union which is attached to the shaft.

Caliper Assemblies

Caliper Assemblies are common to all TC models. Each Caliper assembly consists of two Caliper halves. Order one Caliper assembly for each Caliper position.

Product Number835121

Ship Wt:2.5 lbs. [1,13 Kg]
 Air Chamber Volume per set:1.25 cu. in.
[1.97 cu. mm]

Friction Facing Kits

Friction Facing Kits contain two asbestos free facings of the specific coefficient of friction selected. One facing kit is required per caliper assembly.

Coefficient	Product Number
HICO .45.....	835111
STD .35.....	835112
LOCO .20.....	835113
Ship Wt: 1/2 lbs. [2,26 Kg]	

Rotary Air Union

The dual output Rotary Air Union is used to connect an air supply to the calipers for a Tension Control Clutch (TCC) installation. The Rotary Air Union is attached to the end of the shaft where the clutch is mounted. A 5/8-18 tapped hole, .78 deep is required.

Product Number835139

Ship Wt: 1.2 lbs. [5,44 Kg]

Thermal Dissipation Vs RPM

Caution:

Do Not operate clutch outside of shaded area.

Data derived at indicated ambient temperature:

- - - - - At 55° - 60° F, 13°-16° C. Ambient
- At 75° - 80° F, 24°-27° C. Ambient

Warning:

Caliper assemblies must be equally spaced on clutch housings to maintain proper balance. Match the number of calipers with a clutch housing that has the same number of caliper positions.

STC 600 AND 940 CLUTCHES

Superior tension control through a broad torque range.

Diagram 1: Plumbing the 600/940 with no valves

Diagram 2: Plumbing the 600/940 with three valves

Different piston sizes give you the widest range

Nexen's clutches actuate using a piston / diaphragm combination in three different sizes. There are no o-rings to stick, no seals to drag. There's nothing to hinder precise control of torque at lower operating pressures.

By engaging and disengaging various combinations of small, medium and large piston sets, you'll have a broad range of torque vs. Air pressure combinations. This gives you precise control over a wide range of torques and air pressures and lets you run a wider variety of materials on the same machine.

The STC 600 and 940 Clutches allow superior torque control for your web with Nexen's line of patented tension control clutches. Three different sized piston sets can be actuated singly, or in any combination for a large number of torque-to-air pressure ranges.

This unique design gives you precise torque control without the problems associated with operating at low air pressures.

Ventilated rotor keeps the clutch and brake cool

The ventilated rotor creates an airflow path that draws cooler ambient air into the center of the rotor. The flow path directs air past the interface and dissipates heat radially away from the unit. This keeps the unit running cooler and longer for better performance.

Features and benefits

- Fine torque control for precise tension control of web processes - 500:1 tension control range
- Field and dynamic programming of pressure/torque characteristics for flexible operations
- Diaphragm operation – no seals to drag or o-rings to stick for great low pressure performance
- Different size piston sets
- Through-shaft mounting
- Compact size
- No rotary air unions required – eliminates "gun drilling" shafts

Variable torque ranges through the use of valves

Use air valves to engage combinations of pistons as shown in Diagram 2. Read the torque value for each piston set directly from the Torque vs. Air Pressure graph on the next page and add them.

Example: STC 600

Large piston set at 40 p.s.i. has a rated torque of 95 in-lb.
Medium piston set at 40 p.s.i. has a rated torque of 67 in-lb.
Small piston set at 40 p.s.i. has a rated torque of 41 in-lb.

Total torque at 40 p.s.i.:
Large + Medium =
95 + 67 = 162 in-lb.
Small only = 41 in-lb.

The total torque range of the clutch will equal the sum of the torques of the individual sets from 0 to maximum air pressure.

TECHNICAL EVALUATION FOR CLUTCHES

TECHNICAL EVALUATION FOR CLUTCHES

GENERAL SELECTION CALCULATIONS

1. Fill in data for Roll Diameter, Web Speed, Web Width and Tension (See chart on page 75 for suggested tension levels for various materials).
2. If tension is given as pounds per mil per inch, (as newtons per micron per mm,) then web thickness is also required data.
3. Calculate maximum and minimum web tension (T_{Wmax} and t_{Wmin}).
4. Calculate Torque Requirement maximum

IMPERIAL SYSTEM (METRIC SYSTEM)

- and minimum. (Calculate Web Power, Total Power and Thermal Power.)
5. Some tension control systems feature a taper tension circuit to reduce tension as wind up roll size increases. Calculate and use maximum taper torque as a substitute for maximum torque when using these systems.
6. Calculate Belted RPM.
7. Calculate Web Horsepower (Power), Total Horsepower (Power) and Thermal Horsepower (Power).

CLUTCH SELECTION

(Refer to torque and horsepower charts on pages 74 and 77.)

1. Clutch must dissipate thermal horsepower (Power) at Belted RPM.
2. Clutch must be able to rotate at Belted RPM.
3. Clutch must deliver both the maximum and minimum torque within its normal control range.

TOOTH CLUTCHES

“Air Champ”

5H SERIES, FLANGE MOUNT TOOTH CLUTCHES

The 5H Series provides:

- ▶ Instantaneous Torque up to 17,500 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 3,700 rpm
- ▶ **7 Bore sizes** ranging from 0.875 to 2.188 inches
- ▶ Positive engagements in multiple positions
- ▶ Immediate start-up with no slippage
- ▶ Versatile mounting capability for bearing supported pulley, sprocket or gear

7 Models offer design flexibility:

- ▶ Sealed, radial ball bearings
- ▶ **Flange Mount** design with tapped mounting holes
- ▶ Thru-shaft mounting design uses a full-length keyway
- ▶ 8.25 inch hose included.

5H SERIES, FLANGE MOUNT TOOTH CLUTCHES

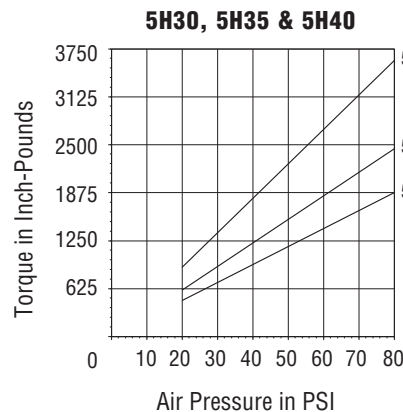

Model	Product Number	Speeds Up to RPM	Bore (In)	Key Size (Sq)	# of Teeth	Shipping Wt. (Lbs)
5H30	906700	3700	0.875	0.188	91	7
5H35	906800	3200	1.125	0.250	106	9
5H40	906900	3000	1.250	0.250	122	11
5H45	907000	3000	1.500	0.375	137	15
5H50	907100	3000	1.750	0.375	152	18
5H60	907200	2400	1.938	0.500	183	28
5H70	907300	2000	2.188	0.500	214	40

Bearing life is optimized at lower speeds and air pressure. For higher speeds consult factory. Keys are customer furnished and must be full-length.

CAUTION!

Tooth clutches are normally engaged when stationary. They are not intended for use in most cyclic applications or high speed engagement. In certain circumstances, tooth clutches can be engaged at differential speeds. Please consult Nexen if you are considering an application involving engagement at differential speeds.

TOOTH CLUTCHES

“Air Champ”

5HP SERIES, PILOT MOUNT TOOTH CLUTCH

The 5HP Series provides:

- Instantaneous Torque up to 55,000 In. Lbs. @ 80 psi
- Maximum Operating Speed up to 4,000 rpm
- 15 Bore sizes ranging from 0.625 to 3.938 inches
- Positive engagement in random positions
- For in-line applications to accommodate misalignment, we recommend use of Nexen Single and Double Flexible Couplings.

10 Models offer design flexibility:

- Sealed, radial ball bearing
- Pilot Mount design with tapped mounting holes
- Thru-shaft mounting design uses a full-length keyway
- Ability to mount a pulley, sprocket or gear on the clutch
- Ability to use a Flexible Clutch Coupling for in-line shaft coupling applications
- 8.25 inch flexible hose included.

ATTACHMENT OPTIONS

Flexible Coupling Assemblies

Flexible Coupling Assemblies are required for in-line coupling applications and are available in single or double flex designs to provide high misalignment capabilities with high torque. Turn to pages 84 and 85 for Flexible Coupling details. For quick selection of Flexible Couplings, refer to the chart above.

Pulleys, Sprockets, Gears

These can be attached to the clutch for offset shaft applications. Tapped holes are provided for ease of mounting. Nexen does not furnish these items. For minimum sprocket requirements, see page 369.

CAUTION!

Tooth clutches are normally engaged when stationary. They are not intended for use in most cyclic applications or high speed engagement. In certain circumstances, tooth clutches can be engaged at differential speeds. Please consult Nexen if you are considering an application involving engagement at differential speeds.

SINGLE AND DOUBLE FLEXIBLE COUPLING ASSEMBLIES

Both Single and Double Flexible Couplings are available for the 5HP Pilot Mount Tooth Clutch. See the following pages for details.

TOOTH CLUTCHES

“Air Champ”

5HP & 5HP-E CLUTCH FLEXIBLE COUPLING ASSEMBLIES

Couple your shaft to a 5HP or 5HP-E Series Tooth Clutch with a Flexible Coupling Assembly. There are 16 Single Flex and 16 Double Flex Couplings, each designed to fit a specific 5HP or 5HP-E Tooth Clutch. Whatever the design style, you'll get:

- ▶ High Misalignment Capability
 - ▶ Torque ratings up to 128,000 In. Lbs.
 - ▶ Nickel-plated surfaces
 - ▶ Coupling discs made from composite materials provide the benefits of both a steel disc and elastomeric coupling.
- Other benefits include:
- ▶ Corrosion resistant
 - ▶ Requires no lubrication
 - ▶ Coupling adds no backlash to the drive
 - ▶ Provides torsional stiffness
 - ▶ Dampens shock and vibration through the power train
 - ▶ Reverse Bushing Tapers for bushing installation from the inside of the coupling.

Find the Flexible Coupling that matches your clutch and your application specifications on this page.

5HP, 5HP-E SINGLE & DOUBLE FLEXIBLE COUPLING SELECTION CHART

1. Determine the Tooth Clutch required for your application and find it on the chart below;
2. Find the matching Flexible Coupling Assembly at the top of the column;
3. Double check the Flexible Coupling specifications to ensure conformity with all mating components;
4. A Taper Lock Bushing is required, see chart below for recommended part. This is customer furnished;
5. Clutch and Flexible Coupling Assembly must be ordered separately.

SINGLE FLEXIBLE COUPLING MISALIGNMENT CAPACITY

Product Number	Angular (Degrees)	Axial (In)	Parallel (In)
909980	1.5	0.065	0.011
910080	1.5	0.070	0.012
910180	1.5	0.080	0.013
910280	1.5	0.090	0.014
910380	1.5	0.105	0.017
910480	1.5	0.120	0.019
910580	1.5	0.135	0.022
911780	1.5	.0135	0.026
913140	2.0	0.216	0.012

DOUBLE FLEXIBLE COUPLING MISALIGNMENT CAPACITY

Product Number	Angular (Degrees)	Axial (In)	Parallel (In)
909981	3.0	0.130	0.063
910081	3.0	0.140	0.078
910181	3.0	0.160	0.085
910281	3.0	0.180	0.091
910381	3.0	0.210	0.104
910481	3.0	0.240	0.117
910581	3.0	0.270	0.137
911781	3.0	0.310	0.170

NOTE: If parallel, angular and axial misalignment are all required, be certain that the combined percentage of each does not exceed 100%. For instance, if 100% of the parallel misalignment rating is required, no angular or axial misalignment is allowed. If 50% of the parallel misalignment rating is required, only 50% of the angular misalignment OR 50% of the axial rating will be available.

TOOTH CLUTCHES

5HP-E SERIES, ENCLOSED PILOT MOUNT TOOTH CLUTCH

The 5HP-E Series provides:

- ▶ Water protection per NEMA standard 1.26.5 (Water-proof machine)
- ▶ Instantaneous Torque up to 12,000 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 1,650 rpm
- ▶ **6 Bore** sizes ranging from 0.875 to 1.938 inches
- ▶ Positive engagements in random positions
- ▶ For in-line applications to accommodate misalignment, we recommend use of Nexen Single and Double Flexible Couplings

6 Models offer design flexibility:

- ▶ Sealed, radial ball bearings
- ▶ **Pilot Mount** design with tapped mounting holes
- ▶ Thru-shaft mounting design uses a full-length keyway
- ▶ Ability to mount a pulley, sprocket or gear on the clutch
- ▶ Ability to use a Flexible Clutch Coupling for the in-line shaft coupling applications
- ▶ 8.25 inch hose included.
- ▶ Nickel-plated exterior
- ▶ For additional corrosion protection, contact the factory

ATTACHMENT OPTIONS

Flexible Coupling Assemblies

Flexible Coupling Assemblies are required for in-line coupling applications and are available in single or double flex designs to provide **high misalignment capabilities with high torque**. Turn to pages 84 and 85 for Flexible Coupling details.

For quick selection of Flexible Couplings, refer to the chart above.

Pulleys, Sprockets, Gears

These can be attached to the clutch for offset shaft applications. Tapped holes are provided for ease of mounting. Nexen does not furnish these items.

For minimum sprocket requirements, see page 371.

CAUTION!

Tooth clutches are normally engaged when stationary. They are not intended for use in most cyclic applications or high speed engagement. In certain circumstances, tooth clutches can be engaged at differential speeds. Please consult Nexen if you are considering an application involving engagement at differential speeds.

SINGLE AND DOUBLE FLEXIBLE COUPLING ASSEMBLIES

Both Single and Double Flexible Couplings are available for the 5HP-E Pilot Mount Tooth Clutch. See the following pages for details.

TOOTH CLUTCHES

5HP-SP SERIES, PILOT MOUNT TOOTH CLUTCH

The 5HP-SP Series provides:

- Instantaneous Torque up to 32,000 In. Lbs. @ 80 psi
- Maximum Operating Speed up to 3,700 rpm
- 13 Bore sizes ranging from 0.875 to 2.938 inches
- Positive engagements for accurate positioning and registration
- For in-line applications to accommodate misalignment, we recommend use of Nexen Single and Double Flexible Couplings.

8 Models offer design flexibility:

- Sealed, radial ball bearings
- Pilot Mount design with tapped mounting holes
- Thru-Shaft mounting design uses a full-length keyway
- Ability to mount a pulley, sprocket or gear on the clutch
- Ability to use a Flexible Clutch Coupling for in-line shaft coupling applications
- 8.25 inch hose included.

MIN. STATIC AIR PRESSURE FOR ENGAGEMENT Vs. RPM

SINGLE AND DOUBLE FLEXIBLE COUPLING ASSEMBLIES

Both Single and Double Flexible Couplings are available for the 5HP-SP Pilot Mount Tooth Clutch. See the following pages for details.

TOOTH CLUTCHES

5HP-SP & 5HP-SP-E CLUTCH FLEXIBLE COUPLING ASSEMBLIES

Couple your shaft to a 5HP-SP or 5HP-SP-E Series Tooth Clutch with a Flexible Coupling Assembly. There are 16 Single Flex and 16 Double Flex Couplings, each designed to fit a specific 5HP-SP or 5HP-SP-E Tooth Clutch.

Whatever the design style, you'll get:

- ▶ High Misalignment Capability
 - ▶ Torque ratings up to 46,300 In. Lbs.
 - ▶ Coupling discs made from composite materials provide the benefits of both a steel disc and elastomeric coupling.
- Other benefits include:
- ▶ Requires no lubrication
 - ▶ Coupling adds no backlash to the drive
 - ▶ Provides torsional stiffness
 - ▶ Dampens shock and vibration through the power train
 - ▶ Reverse Bushing Tapers for bushing installation from the inside of the coupling.

Find the Flexible Coupling that matches your clutch and your application specifications on this page.

- ▶ Nickel-plated exterior
- ▶ For additional corrosion protection, contact the factory

5HP-SP, 5HP-SP-E SINGLE & DOUBLE FLEXIBLE COUPLING SELECTION CHART

1. Determine the Tooth Clutch required for your application and find it on the chart below;
2. Find the matching Flexible Coupling Assembly at the top of the column;
3. Double check the Flexible Coupling specifications to ensure conformity with all mating components;
4. A Taper Lock Bushing is required, see chart below for recommended part. This is customer furnished;
5. Clutch and Flexible Coupling Assembly must be ordered separately.

SINGLE FLEXIBLE COUPLING MISALIGNMENT CAPACITY

Product Number	Angular (Degrees)	Axial (In)	Parallel (In)
909980	1.5	0.065	0.011
910080	1.5	0.070	0.012
910180	1.5	0.080	0.013
910280	1.5	0.090	0.014
910380	1.5	0.105	0.017
910480	1.5	0.120	0.019
910580	1.5	0.135	0.022
911780	1.5	0.155	0.026

DOUBLE FLEXIBLE COUPLING MISALIGNMENT CAPACITY

Product Number	Angular (Degrees)	Axial (In)	Parallel (In)
909981	3.0	0.130	0.063
910081	3.0	0.140	0.078
910181	3.0	0.160	0.085
910281	3.0	0.180	0.091
910381	3.0	0.210	0.104
910481	3.0	0.240	0.117
910581	3.0	0.270	0.137
911781	3.0	0.310	0.170

NOTE: If parallel, angular and axial misalignment are all required, be certain that the combined percentage of each does not exceed 100%. For instance, if 100% of the parallel misalignment rating is required, no angular or axial misalignment is allowed. If 50% of the parallel misalignment rating is required, only 50% of the angular misalignment OR 50% of the axial rating will be available.

TOOTH CLUTCHES

5HP-SP-E SERIES, ENCLOSED PILOT MOUNT TOOTH CLUTCH

The 5HP-SP-E Series provides:

- Water protection per NEMA standard 1.26.5 (Water-proof machine)
- Instantaneous Torque up to 12,000 In. Lbs. @ 80 psi
- Maximum Operating Speed up to 1,650 rpm
- 6 Bore sizes ranging from 0.875 to 1.938 inches
- Positive engagement for accurate position and registration
- For in-line applications to accommodate misalignment, we recommend use of Nexen Single and Double Flexible Couplings.

6 Models offer design flexibility:

- Sealed, radial ball bearings
- Pilot Mount design with tapped mounting holes
- Thru-shaft mounting design uses a full-length keyway
- Ability to mount a pulley, sprocket or gear on the clutch
- Ability to use a Flexible Clutch Coupling for the in-line shaft coupling applications
- 8.25 inch hose included.
- Nickel-plated exterior
- For additional corrosion protection, contact the factory

5HP-SP-E, ENCLOSED PILOT MOUNT TOOTH CLUTCHES—SINGLE POSITION

ATTACHMENT OPTIONS

Flexible Coupling Assemblies

Flexible Coupling Assemblies are required for in-line coupling applications and are available in single or double flex designs to provide high misalignment capabilities with high torque. Turn to pages 90 and 91 for Flexible Coupling details. For quick selection of Flexible Couplings, refer to the chart above.

Pulleys, Sprockets, Gears

These can be attached to the clutch for off set shaft applications. Tapped holes are provided for ease of mounting. Nexen does not furnish these items. For minimum sprocket requirements, see page 371.

CAUTION!

Tooth clutches are normally engaged when stationary. They are not intended for use in most cyclic applications or high speed engagement. In certain circumstances, tooth clutches can be engaged at differential speeds. Please consult Nexen if you are considering an application involving engagement at differential speeds.

TORQUE VS. AIR PRESSURE

5H30PSP-E, 5H35PSP-E & 5H40PSP-E

5H45PSP-E, 5H50PSP-E & 5H60PSP-E

MIN. STATIC AIR PRESSURE FOR ENGAGEMENT VS. RPM

NOTE: Proper Single Position Tooth Clutch engagement depends upon 1) the allowable engagement speed with specific inertia loads and air pressure, and 2) the acceptable speed and air pressure which allow the clutch to engage in one position.

5HP-SP-E SERIES, ENCLOSED PILOT MOUNT TOOTH CLUTCHES - APPROXIMATE DIMENSIONS (INCHES)

SINGLE AND DOUBLE FLEXIBLE COUPLING ASSEMBLIES

Both Single and Double Flexible Couplings are available for the 5HPSP-E Pilot Mount Tooth Clutch. See the following pages for details.

TOOTH CLUTCHES

“Air Champ”

5HS SERIES, SPROCKET TOOTH CLUTCHES

The 5HS Series Provides:

- ▶ Torque capacity up to 3500 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 4000 rpm
- ▶ **3 Bore** sizes ranging from 0.625 to 1.250 inches
- ▶ Positive engagement without slippage
- ▶ Bi-directional operation
- ▶ Adjustable torque by varying air pressure
- ▶ Sprocket mount capability
- ▶ Static air pressure operation
- ▶ Small, light weight durability
- ▶ 5 inch or 8.25 inch hose included

3 Models offer design flexibility:

- ▶ 1 Integral Single Sprocket design
- ▶ 2 Integral Double/Single Sprocket designs

These clutches are ideal for in-line, zoned conveyor applications, as well as other applications that require bi-directional movement.

TOOTH CLUTCHES

“Air Champ”

5HP-SE SERIES, SPRING ENGAGED TOOTH CLUTCHES, PILOT & FLANGE MOUNT MODELS

The 5HP-SE Series provides:

- ▶ Spring engaged, Air released
 - ▶ Instantaneous Torque up to 15,000 In. Lbs.
 - ▶ Maximum Operating Speed up to 3,200 rpm, Pilot Mount and 3,700 rpm, Flange Mount
 - ▶ **Bore sizes:** Up to 1.938
 - ▶ Positive engagements in multiple positions
 - ▶ Immediate start-up with no slippage
 - ▶ Versatile mounting capability for bearing supported pulley, sprocket or gear
 - ▶ For Pilot Mount in-line applications to accommodate misalignment, we recommend use of Nexen Single and Double Flexible Couplings.
- 16 Models** offer design flexibility:
- ▶ Designed with tapped mounting holes
 - ▶ Sealed, radial ball bearings
 - ▶ Thru-shaft mounting design uses a full-length keyway
 - ▶ Pilot Mount offers ability to mount a pulley, sprocket or gear on the clutch
 - ▶ Pilot Mount offers ability to use a Flexible Clutch Coupling for in-line shaft coupling applications
 - ▶ 8.25 inch hose included.

5H50SE	907101	3000	1.750	0.375 x 0.375	152	18	8230	105	

Bearing life is optimized at lower speeds and air pressure. For higher speeds consult factory. Keys are customer furnished and must be full-length.

▶ **ATTACHMENT OPTIONS (PILOT MOUNT SERIES)**

Flexible Coupling Assemblies

Flexible Coupling Assemblies are required for in-line coupling applications and are available in single or double flex designs to provide **high misalignment capabilities with high torque**. Turn to pages 84 and 85 for Flexible Coupling details. For quick selection of Flexible Couplings, refer to the chart above.

Pulleys, Sprockets, Gears

These can be attached to the clutch for offset shaft applications. Tapped holes are provided for ease of mounting. Nexen does not furnish these items. For minimum sprocket requirements, see page 371.

CAUTION!

Tooth clutches are normally engaged when stationary. They are not intended for use in most cyclic applications or high speed engagement. In certain circumstances, tooth clutches can be engaged at differential speeds. Please consult Nexen if you are considering an application involving engagement at differential speeds.

SINGLE AND DOUBLE FLEXIBLE COUPLING ASSEMBLIES

Both Single and Double Flexible Couplings are available for the 5HP Pilot Mount Tooth Clutch. See the following pages for details.

TOOTH CLUTCHES

“Air Champ”

METRIC 5H SERIES, FLANGE MOUNT TOOTH CLUTCHES

The Metric 5H Series provides:

- ▶ Instantaneous Torque up to 2,000 Nm
 - ▶ Maximum Operating Speed up to 3700 rpm
 - ▶ **7 Standard Bore** sizes ranging from 20 to 55 millimeters
 - ▶ **7 Minimum Bore** sizes ranging from 12,7 to 47,6 millimeters—you machine and assemble
 - ▶ Positive engagement in multiple positions
 - ▶ Immediate start-up with no slippage
 - ▶ Versatile Mounting Capability for bearing supported pulley, sprocket or gear.
- 7 Models** offer design flexibility:
- ▶ Sealed, radial ball bearings
 - ▶ **Pilot Mount** design with tapped mounting holes
 - ▶ Thru-shaft mounting design uses a full-length keyway
 - ▶ 222 millimeter hose included.

▶ **METRIC 5H SERIES, FLANGE MOUNT TOOTH CLUTCHES—MULTIPOSITION Standard Bore Clutch:**

Model	Product Number	Speeds Up to RPM	Bore (mm)	KEYWAY WD x DP	# of Teeth	Shipping Wt. (kg)

TOOTH CLUTCHES

METRIC 5HP-E SERIES, ENCLOSED PILOT MOUNT TOOTH CLUTCHES

The Metric 5HP-E Series provides:

- ▶ Water protection per NEMA standard 1.26.5 (Water-proof machine)
- ▶ Instantaneous Torque up to 1,300 Nm
- ▶ Maximum Operating Speed up to 1650 rpm
- ▶ **6 Standard Bore** sizes ranging from 20 to 45 millimeters
- ▶ Positive engagement in random positions.

6 Models offer design flexibility:

- ▶ Sealed, radial ball bearings
- ▶ Pilot mount design with tapped mounting holes
- ▶ Thru-shaft mounting design uses a full-length keyway
- ▶ Ability to mount a pulley, sprocket or gear on the clutch
- ▶ 222 millimeter hose included.
- ▶ Nickel-plated exterior
- ▶ For additional corrosion

▶ **METRIC 5HP-E SERIES, ENCLOSED PILOT MOUNT TOOTH CLUTCHES—MULTIPOSITION**

Standard Bore Units:

Model	Product Number	Speeds Up to RPM	Bore (mm)	KEYWAY WD x DP	# of Teeth	Shipping Wt. (kg)

TOOTH CLUTCHES

METRIC 5HP-SP SERIES, PILOT MOUNT TOOTH CLUTCHES

The Metric 5HP-SP Series provides:

- ▶ Instantaneous Torque up to 3,705 Nm
- ▶ Maximum Operating Speed up to 3700 rpm
- ▶ **8 Standard Bore** sizes ranging from 20 to 75 millimeters
- ▶ **8 Minimum Bore** sizes ranging from 12,7 to 47,6 millimeters— you machine and assemble
- ▶ Positive engagement for accurate positions and perfect registration
- ▶ Accurate timing between two shafts

8 Models offer design flexibility:

- ▶ Sealed, radial ball bearings
- ▶ **Pilot Mount** design with tapped mounting holes
- ▶ Thru-shaft mounting design uses a full-length keyway
- ▶ Ability to mount a pulley, sprocket or gear on the clutch
- ▶ 222 millimeter hose included.

CAUTION!

Tooth clutches are normally engaged when stationary. They are not intended for use in most cyclic applications or high speed engagement. In certain circumstances, tooth clutches can be engaged at differential speeds. Please consult Nexen if you are considering an application involving engagement at differential speeds.

NOTE: Proper Single Position Tooth Clutch engagement depends upon 1) the allowable engagement speed with specific inertia loads and air pressure, and 2) the acceptable speed and air pressure which allow the clutch to engage in one position.

Torque (In. Lbs.) = Nm x 8.849
PSI = Bar ÷ .0689

▶ METRIC 5HP-SP SERIES, PILOT MOUNT TOOTH CLUTCHES - SINGLE POSITION Standard Bore Clutch:

TOOTH CLUTCHES

METRIC 5HP-SP-E SERIES, ENCLOSED PILOT MOUNT TOOTH CLUTCHES

The Metric 5HP-SP-E Series provides:

- ▶ Water protection per NEMA standard 1.26.5 (Water-proof machine)
- ▶ Instantaneous Torque up to 1,300 Nm
- ▶ Maximum Operating Speed up to 1650 rpm
- ▶ **6 Standard Bore** sizes ranging from 20 to 45 millimeters
- ▶ Positive engagement for accurate position and registration
- ▶ Accurate timing between two shafts.

6 Models offer design flexibility:

- ▶ Sealed, radial ball bearings
- ▶ Pilot mount design with tapped mounting holes
- ▶ Thru-shaft mounting design uses a full-length keyway
- ▶ Ability to mount a pulley, sprocket or gear on the clutch
- ▶ 222 millimeter hose included.
- ▶ Nickel-plated exterior
- ▶ For additional corrosion protection, contact the factory

▶ METRIC 5HP-SP-E SERIES, ENCLOSED PILOT MOUNT TOOTH CLUTCHES— SINGLE POSITION

Standard Bore Units:

Model	Product Number	Speeds Up to RPM	Bore (mm)	KEYWAY WD x DP	# of Teeth	Shipping Wt. (kg)
5H30P-SP-E	913004	1650	20	6 x 2,8	91	3,3
5H35P-SP-E	913014	1350	25	8 x 3,3	106	4,7

NEXEN MECHANICAL TORQUE LIMITER FAMILY

▶ **SINGLE POSITION RE-ENGAGEMENT: Standard Version**

- ▶ After the overload has been removed, the coupling will re-engage precisely 360° from the original disengaged position.
- ▶ Overload signal with a mechanical switch or a proximity sensor.
- ▶ Suitable for use in machine tools, packing machines and automation systems and other applications requiring precise timing.

▶ **MULTI-POSITION RE-ENGAGEMENT:**

- ▶ Coupling re-engages at multiple set angular intervals.
- ▶ Immediate availability of the machine as soon as the overload has been removed.
- ▶ Overload signal with a mechanical switch or a proximity sensor.
- ▶ Standard engagement every 60°.
- ▶ Engagement after 30, 45, 90 and 120° optional.

▶ **FULL DISENGAGEMENT:**

- ▶ Permanent separation of drive and driven face in the event of a torque overload.
- ▶ Overload signal with a mechanical switch or a proximity sensor.
- ▶ No residual friction.
- ▶ Coupling can be re-engaged manually (Engagement every 60° with other engagement options available including single position.)
- ▶ For use in high dynamic applications.

▶ **DIMENSIONS:**

- ▶ Go to the Nexen web site (nexengroup.com)
- ▶ Select “Find Products” -- “Product Search by Category” -- “Mechanical Torque Limiters”

▶ **ORDERING INFORMATION:** See Page 124

TORQUE LIMITERS

Nexen's line of **Torque Limiters** is designed to protect your equipment by immediately disengaging the drive shaft when excessive torque occurs:

- ▶ Single position, ball detent design assures re-engagement of the drive from a complete stop in the same position every time, providing exact timing of both components

Nexen's **Air Pressure Circuits** complete the package for total overall protection:

- ▶ **Single Air Pressure** circuit allows for remote adjustment of the torque setting
- ▶ **Dual Air Pressure** circuit permits remote adjustment of torque while allowing a higher pressure for startup (high inertia loads) and a lower pressure for running torque requirements

When used with Torque Limiters, Nexen **Single or Double Flexible Couplings** allow:

- ▶ High shaft misalignment
- ▶ Zero backlash
- ▶ Excellent torsional stiffness

▶ **HOW A TORQUE LIMITER SYSTEM WORKS:**

1. Install Torque Limiter, Limit Switch and the Air Pressure Control System;
2. Set the air pressure for the desired overload torque;
3. If an overload occurs, the Torque Limiter interface separates, moving the cylinder to the disengaged position;
4. The Limit Switch detects the cylinder movement and interrupts electrical power. Interruption of electrical power de-energizes the 3-way N.C. solenoid valve, which exhausts air pressure from the Torque Limiter, causing it to disengage.
5. When the machinery comes to a **complete stop**, re-engage the Torque Limiter by jogging the drive, thus allowing machine operation to continue.

The following pages detail your Torque Limiter System options. You'll find information on Air Pressure Control Systems, Torque Limiter designs and Flexible Couplings. Once you have determined your total system requirements, order each item separately.

▶ **AIR PRESSURE CONTROL SYSTEMS:**

Choose from 2 Air Pressure Control Systems—Single or Dual:

The **Single Air Pressure System** provides basic protection:

- ▶ A constant bleed type Air Regulator is set to an air pressure that will allow the machine to operate, but low enough for Torque Limiter disengagement in the event of machine overload
- ▶ The Air Regulator also provides a constant bleed to eliminate back pressure in the air line while precisely maintaining pressure within .05 psi.
- ▶ Torque setting can be changed while the machine is running via the Air Regulator.

The **Dual Air Pressure System** provides ultimate protection, allowing higher startup pressure (high inertia load) and lower pressure for running with overload protection:

- ▶ Regulator #1 is set to an air pressure high enough to allow machine startup
- ▶ After a pre-set period of time, the Time Delay Control de-energizes the 3-way inline mount solenoid valve, allowing only the lower running air pressure to operate the Torque Limiter
- ▶ Regulator #2 is set to an air pressure that will allow the machine to operate, but low enough for Torque Limiter disengagement in the event of a machine overload
- ▶ Regulator #2 also provides a constant bleed to eliminate back pressure in the air line during overload

▶ **SMARTVALVE CONTROLLER**

The **Nexen SmartValve Controller** is a microprocessor based pressure controller that is ideally suited for use with Nexen torque limiters, brakes and clutches. The SmartValve replaces much of the valves, regulators, air lines and plumbing needed to provide multiple pressures to Nexen's pneumatic products.

- ▶ The SmartValve accepts pressure set points in two ways: analog and digital. A 0-10 analog signal caused the SmartValve to output a proportional 0-80 psig.
- ▶ Four digital inputs allow the SmartValve to output 16 different pressures that correspond to one of the standard or custom pressure tables stored onboard.
- ▶ Another input is used to sense a switch closure that signals the SmartValve to exhaust the air pressure, such as in the case of a torque limiter overload.
- ▶ A solid state relay output provides alarm indication during overload situations.

► AIR PRESSURE CONTROL SYSTEMS

Control Systems Style	Product Number
Dual System Consists of:	801579 (1) Air Regulator Air Gauge - Constant Bleed Type, 0-100 PSI, 125 NPT (2) Quick Exhaust Valve (2) Tee Fittings, 125 NPTF (1) Air Filter, regular duty, 250 NPT (1) Air Regulator/Gauge, 0-125 PSI, 250 NPT (2) 3-Way Inline Mount Solenoid Valve, N.C. (1) Adjustable Time Delay Control
Single System Consists of:	801578 (1) Air Regulator Air Gauge - Constant Bleed Type, 0-100 PSI, 125 NPT (1) 3-Way Inline Mount Solenoid Valve N.C. (1) Quick Exhaust Valve (1) Tee Fitting, 125 NPTF

► RECOMMENDED AIR LINE CONNECTIONS

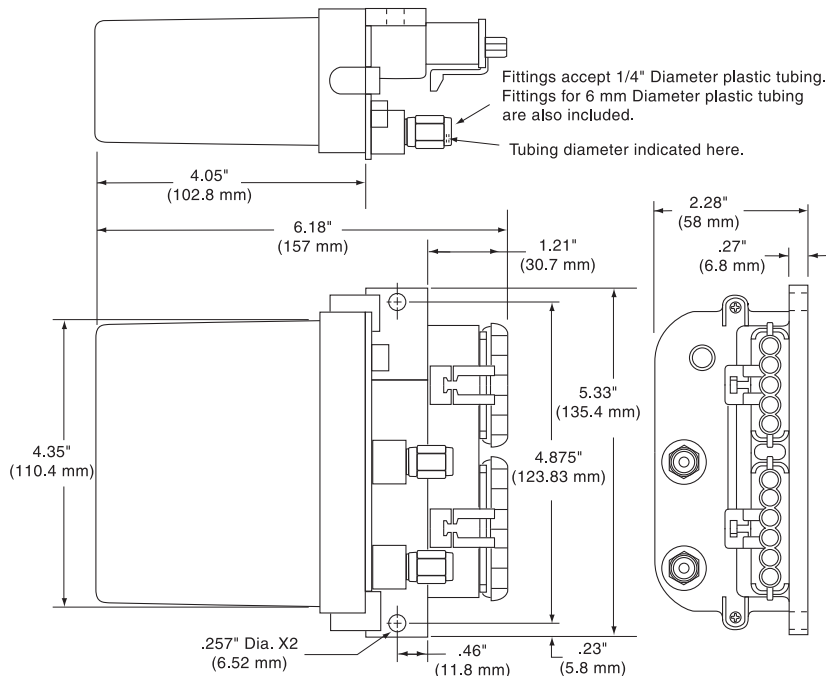

NOTE: Areas colored tan, and italicized tan type and arrows indicate “single air pressure system” installation only. “Dual air pressure system” requires all components.

► SMARTVALVE CONTROLLER

Control Systems Style	Product Number
SmartValve Controller	964508
115/230 VAC Power Supply	964509
Specifications:	DC Power, 24 VDC @ 500mA (Optional 24VDC CE, UL, CSA approved 115/230 VAC power supply available) Input Pressure Range, 85–150 PSIG (6–10 bar) Output Pressure Range, 0–80 PSIG (0–5.5 bar) Accuracy, ± .25% full scale @ 77°F (25°C) Cable, 6.5ft. (2m) cable included

TL-A SERIES TORQUE LIMITERS, SET SCREW MOUNTED

TL-A Series Set Screw Mounted, Open Design Torque Limiters provide:

- ▶ **16 Models** to choose from
- ▶ Torque up to 27,700 In. Lbs. @ 80 psi
- ▶ Operating Speed up to 2000 rpm
- ▶ Bore Sizes ranging from 0.625 to 2.938 inches
- ▶ Remote torque adjustment with Nexen's **Single** and **Double Air Pressure Circuits**
- ▶ Many Models available in either high torque or low torque versions
- ▶ Proximity Sensor with 3 ft. cord and hardware included on all models

TL80-A/2	801566	850	12000	2.938	0.750 x 0.500	70

Minimum Shaft insertion halfway through Hub. Keys are customer furnished.

Operating Speed: Disengaging speeds are limited to the maximum allowable feet per minute rating of the rotary seal between the drive flange and drive ring. Torque Limiters are engaged when stationary.

NOTE: For higher speeds-consult Nexen.

ATTACHMENT OPTIONS

Flexible Coupling Assemblies

Flexible Coupling Assemblies are required for in-line coupling applications, and are available in single or double flex designs to provide **high misalignment capabilities with high torque**. Turn to pages 118 and 119 for Flexible Coupling details.

Pulleys, Sprockets, Gears

These can be attached to the clutch for offset shaft applications. Tapped holes are provided for ease of mounting. Nexen does not furnish these items. For minimum sprocket requirements, see page 371.

TL-A-E SERIES TORQUE LIMITERS, SET SCREW MOUNT

TL-A-E Series Set Screw Mounted, Enclosed Torque Limiters provide:

- ▶ **10 Models** to choose from
- ▶ Torque up to 10,820 In. Lbs. @ 80 psi
- ▶ Operating Speed up to 1650 rpm
- ▶ Bore Sizes ranging from 0.875 to 1.938 inches
- ▶ Remote torque adjustment with Nexen's **Single** and **Double Air Pressure Circuits**
- ▶ Many Models available in either high torque or low torque versions
- ▶ Proximity Sensor with 3 ft. cord and hardware included on all models
- ▶ Water protection per NEMA Standard 1.26.55 (waterproof machines)
- ▶ Nickel-plated exterior
- ▶ For additional corrosion protection, contact the factory

▶ **TL-A-E SERIES TORQUE LIMITERS - SET SCREW MOUNT**

TL60A/2-E	802946	Yes	1000	3800	1.938	0.500	30

Minimum Shaft insertion halfway through Hub. Keys are customer furnished.

Operating Speed: Disengaging speeds are limited to the maximum allowable feet per minute rating of the rotary seal between the drive flange and drive ring. Torque Limiters are engaged when stationary.

NOTE: For higher speeds-consult Nexen.

Flexible Coupling Assemblies

Flexible Coupling Assemblies are required for in-line coupling applications, and are available in single or double flex designs to provide **high misalignment capabilities with high torque**. Turn to pages 118 and 119 for Flexible Coupling details.

For quick selection of Flexible Couplings, refer to the chart above.

Pulleys, Sprockets, Gears

These can be attached to the clutch for offset shaft applications. Tapped holes are provided for ease of mounting. Nexen does not furnish these items. For minimum sprocket requirements, see page 371.

TORQUE LIMITER FLEXIBLE CLUTCH COUPLING ASSEMBLIES

Couple your shaft to a Torque Limiter with a Flexible Coupling Assembly. There are 14 Single Flex and 14 Double Flex Couplings, each designed to fit a specific Torque Limiter. Whatever the design style you'll get:

- ▶ High Misalignment Capability
 - ▶ Torque ratings up to 46,300 In. Lbs.
 - ▶ Coupling discs made from composite materials provide the benefits of both a steel disc and elastomeric coupling
- Other benefits include:
- ▶ Requires no lubrication
 - ▶ Coupling adds no backlash to the drive
 - ▶ Provides torsional stiffness
 - ▶ Dampens shock and vibration through the power train
 - ▶ Reverse Bushing Tapers for bushing installation from the inside of the coupling.

Find the Flexible Coupling that matches your Torque Limiter and your application specifications on this page.

- ▶ Nickel-plated exterior
- ▶ For additional corrosion protection, contact the factory

TORQUE LIMITER SINGLE & DOUBLE FLEXIBLE COUPLING SELECTION CHART

1. Determine the Torque Limiter required for your application and find it on the chart below;
2. Find the matching Flexible Coupling Assembly at the top of the column;
3. Double check the Flexible Coupling specifications to ensure conformity with all mating components;
4. A Taper Lock Bushing is required; see chart below for recommended part. This is customer furnished.
5. Clutch and Flexible Coupling Assembly must be ordered separately.

Single Flex #:	909980	910080	910280	910380	910480	910580	911780

911780	1.5	0.155	0.026

DOUBLE FLEXIBLE COUPLING MISALIGNMENT CAPACITY

Product Number	Angular (Degrees)	Axial (In)	Parallel (In)
909981	3.0	0.130	0.063
910081	3.0	0.140	0.078
910281	3.0	0.180	0.091
910381	3.0	0.210	0.104
910481	3.0	0.240	0.117
910581	3.0	0.270	0.137
911781	3.0	0.310	0.170

NOTE: If parallel, angular and axial misalignment are all required, be certain that the combined percentage of each does not exceed 100%. For instance, if 100% of the parallel misalignment rating is required, no angular or axial misalignment is allowed. If 50% of the parallel misalignment rating is required, only 50% of the angular misalignment OR 50% of the axial rating will be available.

METRIC TL-A & TL-AE SERIES TORQUE LIMITERS, SET SCREW MOUNTED

Metric TL-A & TL-AE Series Torque Limiters provide:

- ▶ **12 Models** to choose from
- ▶ Torque up to 1350 Nm
- ▶ Operating Speed up to 2000 rpm
- ▶ Standard bore sizes ranging from 15 to 75 millimeters
- ▶ Minimum bore sizes ranging from 20 to 45 millimeters—you assemble and machine
- ▶ Proximity Sensor with 0,91 meters long cord and hardware included on all models

▶ **TL-AE METRIC SERIES TORQUE LIMITERS, SET SCREW MOUNT**

Model	Product Number	Speeds Up to RPM	Torque Up to (Nm)	Bore (mm)	Shipping Wt. Wt (kg)
TL20-AE	802904	1800	100	20	3,2
TL30-AE	802914	1650	260	25	4,5
TL40-AE	802924	1350	500	35	7,1
TL50-AE	802934	1200	750	40	9
TL60-AE	802944	1050	1300	45	13,5

Minimum Shaft insertion halfway through Hub. Keys are customer furnished.

Operating Speed: Disengaging speeds are limited to the maximum allowable feet per minute rating of the rotary seal between the drive flange and drive ring. Torque Limiters are engaged when stationary.

NOTE: For higher speeds-consult Nexen.

▶ **MINIMUM BORED TL-A ARE NOT TOTALLY ENCLOSED**

Minimum bore Models are supplied unassembled with machinable hubs.

Model	Product Number	Speeds Up to RPM	Torque Up to (Nm)	Bore (mm)	Key Size (WD X DP)	Shipping Wt. Wt (kg)
TL10-A	951302	2000	21	15	5 X 2,3	3,2
TL15-A	951312	2000	41	15	5 X 2,3	3,2
TL20-A	951203	1800	100	12,7		3,2
TL30-A	951213	1650	260	15,9		4,5
TL40-A	951223	1350	500	19,1		7,1
TL50-A	951233	1200	750	25,4		9
TL60-A	951243	1050	1300	31,8		13,5

Minimum Shaft insertion halfway through Hub. Keys are customer furnished.

Operating Speed: Disengaging speeds are limited to the maximum allowable feet per minute rating of the rotary seal between the drive flange and drive ring. Torque Limiters are engaged when stationary.

NOTE: For higher speeds-consult Nexen.

▶ **ATTACHMENT OPTIONS**

Pulleys, Sprockets, Gears

These can be attached to the clutch for offset shaft applications. Tapped holes are provided for ease of mounting. Nexen does not furnish these items. For minimum sprocket requirements, see page 369.

▶ **TORQUE VS. AIR PRESSURE**

Torque (In. Lbs.) = Nm x 8.849
PSI = Bar ÷ .0689

OVERLOAD PROTECTION DEVICES

“Air Champ”

OVERLOAD PROTECTION SYSTEM

Overload Protection System (OPS) is a combination of a flange-mounted, air engaged clutch and an electronic control that electronically detects clutch slip in torque overload conditions. Upon recognition of the overload, the system disengages the clutch, and can operate an external signalling device (i.e. warning light/alarm).

OPS includes two proximity sensors: one mounted on the clutch input, and one mounted on the clutch output. The control compares the signals from the individual sensors and determines if the clutch is slipping.

- ▶ The clutch is re-engaged at any speed, and at any position of the clutch interface
- ▶ The clutch torque is remotely adjusted with a simple air regulator
- ▶ The motor disconnects from the load when an overload occurs, so the motor runs cooler and more efficiently, without current surges and blown fuses
- ▶ The OPS also prevents the motor rotor inertia from contributing to damage caused by torque overloads
- ▶ The FMCE clutch is self-contained and protected from dirt and debris
- ▶ The controller is available in a NEMA Type 12 enclosure, or as a stand-alone board for panel mounting
- ▶ OPS operates on standard AC or DC voltages and frequencies
- ▶ Quick connect/disconnect wire connection coupling
- ▶ Soft-start capabilities provides more sensitive overload protection than ball-detent mechanisms

Order Example:

Ordering example: Select a single position torque limiter with a tapered bushing to fit a 1.000 inch shaft and have a trip torque of 500 in-lbs (56 Nm). MTL selection: MTL60-PMT-SP-1.000-25/80-56

SERVOMOTOR BRAKES

SERVOMOTOR BRAKES
High-torque, Spring-engaged, Power-off Brakes

ECLIPSE™ PRODUCTS

Nexen Spring-engaged, Air-released Products

Emergency stop, spring-engaged brakes to fit every servo, stepper or alternating current motor up to 20 horsepower. Eclipse brakes are designed to match NEMA and IEC flange and shaft dimensions.

Safety Brake

Nexen's Eclipse™ brakes function to safely hold a load in place in power-off situations. These units hold the load stationary until the motor moves again, helping to:

- Provide worker safety
- Prevent machine damage
- Perform emergency stops
- Protect product
- Function during power failures
- Reduce machine coasting time
- Provide safety during lock-out/tag-out procedures

Cool Operation

Holding brakes are typically disengaged with air or electricity. Brakes using air have several times more torque than similar sized electric brakes. When electric brakes remain disengaged for long periods of time, the electric coil is on and consuming energy. This energy, in the form of heat, is absorbed by the brake and can rob the brake of efficiency when it's called on to stop and/or hold the load. Conversely, when an air brake remains disengaged, a small amount of compressed air is dead-headed into an air chamber keeping the springs from engaging the brake. No energy is consumed and the brake remains cool until it is applied which dramatically reduces the chance of brake fade (loss of torque).

Servomotor Brake

Nexen has an Eclipse brake for every servo motor. Flanges range in size from 57 mm [2.25 in] up to 265 mm [10.43 in] square with shaft diameters from 6,35 mm [0.25 in] up to 48 mm [1.89 in]. Brake torque is four times that of servo motor internal brakes and ranges from 2,25 Nm [20 in-lb] to 125 Nm [1100 in-lb]. These low inertia brakes provide the holding power needed for every application.

AC Motor Brake, NEMA and IEC flanged

Nexen's motor brakes mount directly to the face of NEMA motor frame sizes 56C to 254TC and IEC motor frame sizes 80 to 132 M. These holding brakes provide torque up to 125 Nm [1100 in-lb].

Linear Stage Brake

The Eclipse Stage Brake mounts to support end of a ball screw or belt drive linear stage. The brake is available in NEMA 23, 34 and 42 frame sizes with holding capacities up to 22 Nm [200 in-lb] torque.

SERVOMOTOR BRAKE, INSTALLED, ISOMETRIC AND END VIEWS

SERVOMOTOR BRAKES

High-torque, Spring-engaged, Power-off Brakes

ECLIPSE™ SERVOMOTOR BRAKE

The Eclipse Servomotor Brake family now includes a line of spring-engaged servomotor brakes equipped with a split hub, clamp collar for attachment to the servomotor shaft. With superior torque outputs, these brakes provide rugged durability for dynamic stopping applications. Eclipse brakes offer consistent long-lasting performance with no maintenance needed. Nexen's servomotor brakes deliver at least 20-50% more torque than competitive brakes and provide safe, simple operation.

The easy-to-use, flange-mounted Eclipse brakes solve many of the problems associated with brake motors. Use them with standard motors for brake motor functionality and off-the-self availability. Nexen offers servomotor brakes in a variety of input and output flange/shaft combinations, all designed to increase the safety of your machines.

Servo Motor Brake with NEMA output flange

- Simple installation with split hub, shaft collar
- Spring-engaged, air-released
- True pilot mounting
- High torque when compared to electric brakes
- Zero backlash for precision holding
- Bidirectional braking
- Long facing life
- Cool operation, high efficiency, less energy consumption
- Designed for horizontal or vertical applications
- Strong enough to stall the servo motor

- Quick, safe emergency stopping and holding
- Remains engaged and holds load during motor change-outs
- Ideal for use with linear ball-screw stages and belt drives
- Field Serviceable
- Low inertia
- Output flange replicates motor flange
- Quick exhaust valve included
- High torsional rigidity
- Meets IP67 dust and waterproof standards

Optional Solenoid Valve allows for:

- Visual disengagement indication
- Manual disengagement on valve
- Simple connections with 24VDC control and 80 PSIG shop air

LINEAR STAGE AND LINEAR MOTION BRAKES

ECLIPSE™ LINEAR STAGE BRAKE

NEMA 23 sizes (NEMA 34 and 42 sizes available on request)

Designed with ease of installation, precision and security in mind, the Nexen Stage Brake provides simple mounting procedures that permit both vertical and horizontal holding for installation on the non-driven end of ball screw stages. This type of installation reduces the risks associated with motor shaft/coupling failure. A true zero backlash brake, it also allows high lead on ball screw stages with-out fear of back-drive.

SPECIFICATIONS

Nexen Product Number	Size Shaft "A"	USED IN: Thompson Super Slide™, Powerslide™ and Ball Screw Assembly

- Emergency holding and stopping for increased safety
- Zero backlash allows for precision holding
- Designed for vertical and horizontal applications
- 2.25 Nm [20 in-lb] of torque
- Simple pneumatic valve for easy installation
- Economical

DIMENSIONS MM [IN]

SPRING-SET MOTOR BRAKES For 1/2 to 20 HP NEMA TC Flange Motors

ECLIPSE™ SPRING-SET MOTOR BRAKE
For 1/2 to 20 HP NEMA Flange Motors

The Nexen flange mounted Eclipse Spring-Set Motor Brake is designed for use with 1/2–20 HP NEMA C-faced motors. This power-off brake is ideal for use in cycling, emergency stopping and holding applications. Low wear rate on the friction material combined with high thermal capabilities make this Motor Brake ideal for dynamic stopping applications. All Nexen spring-set pneumatic brakes run cooler and last longer than electrical spring-set brakes. Replace your double shafted brake motor with a standard motor and a Nexen Spring-Set Motor brake for off-the-shelf availability.

NEMA TC Flange Motor Brake

- Spring-set, air-released brake for holding applications
- Power-off brakes for emergency and dynamic stopping functions
- Fits 1/2 to 20 Horsepower NEMA TC flange motors
- High torque capacity
- Operating speed up to 5000 rpm
- Continuous thermal horsepower up to 0.30 HP_t [0,22 kW]
- Low inertia rotor/shaft
- Easy to install, completely assembled
- Vertical or horizontal mounting configuration
- Totally enclosed
- Exterior finish: black paint

SPRING-SET MOTOR BRAKES For 0,25 to 7,5 kW IEC B5 Flange Motors

ECLIPSE™ SPRING-SET MOTOR BRAKE
For 0,25 to 7,5 kW IEC B5 Flange Motors

The Nexen flange mounted Eclipse Spring-Set Motor Brake is designed for use with 0,25 – 7,5 kW IEC B5 faced motors. This power-off brake is ideal for use in cycling, emergency stopping and holding applications. Low wear rate on the friction material combined with high thermal capabilities make this Motor Brake ideal for dynamic stopping applications. All Nexen spring-set pneumatic brakes run cooler and last longer than electrical spring-set brakes. Replace your double shafted brake motor with a standard motor and a Nexen Spring-Set Motor brake for off-the-shelf availability.

IEC B5 Flange Motor Brake

- Simple installation with split hub and shaft collar
- Spring-set, air-released brake for holding applications
- Power-off brakes for emergency and dynamic stopping functions
- Fits 0,25 to 7,5 kilowatt IEC B5 flange motors
- High torque capacity
- Operating speed up to 10,000 rpm
- Continuous thermal horsepower up to 0,22 kW {0.30 HP_t}
- Low inertia rotor/shaft
- Easy to install, completely assembled
- Vertical or horizontal mounting configuration
- Totally enclosed
- Exterior finish: black paint

MICRO FRICTION BRAKE

The Micro Friction Clutch and a Flange Adapter combine to form a brake assembly which provides:

- ▶ Maximum Operating Speed up to 3600 rpm
- ▶ Thermal Horsepower rating of 0.06 at 3600 rpm
- ▶ Static Torque capacity up to 18 In. Lbs. @ 80 psi
- ▶ Heat Sink capacity of 1900 Ft. Lbs.
- ▶ 0.375 inch **Standard Bore**
- ▶ 5 inch hose assembly with 0.125 NPT included

The Brake and Flange Adapter must be ordered separately. Use the slot in the Flange Adapter to anchor the pilot.

▶ **MICRO FRICTION BRAKE**

Component	Product Number	Bore (In)	Shipping Wt. (Lbs)
Micro Clutch	856800	0.375	3
Flange Adapter	856700	--	1

Set Screw for shaft included.

Required shaft insertion into clutch hub = minimum of 1 inch. From flange adapter end.

BANTAM WEIGHT MODEL BW FRICTION BRAKE

The BW Friction Brake and Flange Adapter combine to form a brake assembly which provides:

- Maximum Operating Speed up to 3600 rpm
- Thermal Horsepower rating of 0.13 @ 3600 rpm
- Static Torque capacity up to 100 In. Lbs. @ 80 psi
- Heat Sink capacity of 5,650 Ft. Lbs.
- **Standard Bore** sizes of 0.500 and 0.625 inches
- 8.5 inch hose included .

The Brake and Flange Adapter must be ordered separately. Use the slot in the Flange Adapter to anchor the pilot.

- BW is equipped with sealed, radial bearings and a single key splined hub.
- B-275 is equipped with sealed, radial bearings and a multitooth splined hub.

STRAIGHT BORE FRICTION BRAKES MODELS S-450, S-600 & S-800

- ▶ Static Torque capacity up to:
 - S-450/440 In. Lbs. @ 80 psi
 - S-600/840 In. Lbs. @ 80 psi
 - S-800/1600 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 1800 rpm
- ▶ Thermal Horsepower rating of:
 - S-450/0.515 @ 1800 rpm
 - S-600/1.300 @ 1800 rpm
 - S-800/2.230 @ 1800 rpm
- ▶ Heat Sink capacity of:
 - S-450/30,000 Ft. Lbs.
 - S-600/60,000 Ft. Lbs.
 - S-800/125,000 Ft. Lbs.
- ▶ Standard or Low Coefficient Facings

These self-adjusting air cooled brakes mount easily and come with:

- ▶ **Standard Bore Sizes:**
 - S-450/1.125 inches
 - S-600/1.375 inches
 - S-800/1.938 inches
- ▶ Split friction facings for easy replacement without brake removal or disassembly
- ▶ Thru-shaft design can be **flange mounted** or **shaft mounted** with a torque pin

Options and Accessories include:

- ▶ **Bushings** That allow you to customize the bore to your shaft diameter
 - S-450/4 Sizes
 - S-600/7 Sizes
 - S-800/7 Sizes
- ▶ Torque Pin Bracket allows you to anchor the housing
- ▶ Brake Safety Guard for protection

▶ **S-450, S-600 & S-800 MODEL STRAIGHT BORE FRICTION BRAKES^①**

Model	Brake	Product Number	Max. Bore with Standard Keyseat (In)	Inertia In (Lb.In ²)	Key Size (SQ)	Shipping Wt. (Lbs)

- ▶ Static Torque capacity up to:
S-1000/3450 In. Lbs. @ 80 psi
S-1200/ 5500 In. Lbs. @ 80 psi
S-1400/ 10,000 In. Lbs. @ 80 psi
 - ▶ Maximum Operating Speed up to 1800 rpm
 - ▶ Thermal Horsepower rating of:
S-1000/ 3.0 @ 1800 rpm
S-1200/ 6.3 @ 1800 rpm
S-1400/ 12.5 @ 1800 rpm
 - ▶ Heat Sink capacity of:
S-1000/200,000 Ft. Lbs.
S-1200/ 555,000 Ft. Lbs.
S-1400/ 650,000 Ft. Lbs.
 - ▶ Standard or Low Coefficient Facings
- These self-adjusting air cooled brakes mount easily and come with:

- ▶ **Standard Bore Sizes:**
S-1000/ 2.938 inches
S-1200/ 3.375 inches
S-1400/3.750 inches
- ▶ Split friction facings for easy replacement without brake removal or disassembly
- ▶ Thru-shaft design can be **flange mounted** or **shaft mounted** with a torque pin

Options and Accessories include:

- ▶ **Bushings** That allow you to customize the bore to your shaft diameter
S-1000/9 Sizes
- ▶ Torque Pin Bracket allows you to anchor the housing
- ▶ Brake Safety Guard for protection

▶ **S-1000, S-1200 & S-1400 MODEL STRAIGHT BORE FRICTION BRAKES[®]**

Model	Brake	Product Number	Max. Bore with Standard Keyseat (In)	Inertia In (Lb.In ²)	Key Size (SQ)	Shipping Wt. (Lbs)

◀ **SPRING ENGAGED BRAKES**

“Air Champ”

TAPERED BORE SPRING ENGAGED BRAKES MODELS TSE-1000, TSE-1200 & TSE-1400

- ▶ Static Torque capacity up to:
 - TSE-1000/3700 In. Lbs.
 - TSE-1200/5500 In. Lbs.
 - TSE-1400/8000 In. Lbs.
- ▶ Maximum Operating Speed up to 1800 rpm
- ▶ Thermal Horsepower rating of:
 - TSE-1000/3.0 @ 1800 rpm
 - TSE-1200/6.3 @ 1800 rpm
 - TSE-1400/ 12.5 @ 1800 rpm
- ▶ Heat Sink capacity of:
 - TSE-1000/200,000 Ft. Lbs.
 - TSE-1200/ 555,000 Ft. Lbs.
 - TSE-1400/ 650,000 Ft. Lbs.

These spring engaged, air disengaged brakes mount easily and come with:

- ▶ Open spring sockets that allow you to add or remove springs to fit your torque needs
- ▶ Tapered bore to accept QD Bushings for mounting flexibility
- ▶ Single plate finned friction discs provide high heat dissipation
- ▶ High dynamic torque capacity ensures fast load response
- ▶ Split friction facing for easy replacement without brake removal or disassembly
- ▶ Flow restrictor valve controls disengagement air to prevent shock load on brake components

Options and Accessories include:

- ▶ Torque Pin Bracket allows you to anchor the housing
- ▶ Brake Safety Guard for protection
- ▶ **Tapered Bore** accepts **standard QD Bushings;**
TSE-1000/Size E, TSE-1200/Size E, & TSE-1400/Size F
 –NOT SUITABLE FOR FLANGE MOUNTING

▶ **TSE-1000, TSE-1200 & TSE-1400 MODEL TAPERED BORE SPRING ENGAGED BRAKES**

◀ **SPRING ENGAGED BRAKES**

“Air Champ”

**FMBES MOTOR BRAKE MODELS
625, 875, 1125 & 1375**

The FMBES is a NEMA C-Flange mounted, spring-engaged, nickel-plated motor brake that combines spring-on and air-release actuation with other performance-enhancing features to provide optimal reliability and application flexibility. Mountable on single shaft electric motors with 56C to 215TC frame sizes, the FMBES uses spring-actuation and designed-in greater heat-sink capacity to eliminate the heat-related brake inefficiencies and failure commonly associated with electric motor brakes. Additionally, the FMBES' dual friction interface provides a large volume of useable friction material for longer facing life.

- ▶ **Bore Sizes** of 0.625, 0.875, 1.125 and 1.375 in.
- ▶ Static Torque capacity up to 900 inch lbs.
- ▶ Covers fractional hp through 10 hp
- ▶ Maximum Operating Speed up to 3600 rpm

FMBES Features and Benefits:

- ▶ Spring-engaged for holding in power-off conditions
- ▶ Self-adjustment for friction material wear a standard feature. Totally eliminates the necessity to shut down for periodic adjustments
- ▶ No special requirements or additional parts for vertical-mounted applications
- ▶ Air-released, greater heat-sink capacity for cooler, more reliable performance
- ▶ Ideal for high-cycle applications
- ▶ Water protection per NEMA standard 1.26.55 (Waterproof machines)
- ▶ Torque from 17 to 75 ft. lbs. for varied applications, streamlined product selection
- ▶ Bearing arrangement designed for excellent overhung load capacity and bearing life
- ▶ Mounts on single shaft motors
- ▶ Side-mounted manual brake release
- ▶ Set screw to securely hold motor shaft key
- ▶ For additional corrosion protection, contact the factory

▶ **FMBES DOUBLE C-FACED MOTOR BRAKES**

FMBES is a NEMA C-Flange Mounted, Spring-engaged, Nickel-plated Motor Brake.

◀ **SPRING ENGAGED BRAKES**

“Air Champ”

SE MODEL SPRING ENGAGED BRAKES

These Spring Engaged Brakes provide protection to equipment when fast, dependable stops are required for non-cyclic applications:

- ▶ Static Torque capacity up to 1150 In. Lbs.
- ▶ Maximum Operating Speed up to 1800 rpm
- ▶ **4 bore sizes** up to 1.375 inches
- ▶ Thermal Horsepower rating up to 0.200

These air disengaged, spring engaged brakes are simply designed, yet are loaded with features:

- ▶ Restrictor Valve controls exhausted air during engagement, ensuring a smooth stop
- ▶ Only 3 moving parts insure durability and dependability
- ▶ Mounting flexibility—NEMA C **Flange mount** or **Shaft mount** capability. Not intended for vertical mount.
- ▶ No dynamic thrust load on bearings when unit is engaged
- ▶ No thrust load, or virtually no radial load, when unit is disengaged and motor is running
- ▶ Manual release mechanism allows ease of maintenance
- ▶ Optional Torque Arm anchors brake housing
- ▶ Optional Adapter Shaft for mounting between motor and reducer
- ▶ Additional options include Output Drive Unit and Mounting Foot for application flexibility

Order Brake, Output Unit, Adapter Shaft, Torque Arm and Mounting Foot separately

MB MODEL SPRING SET BRAKES

These Spring Set Brakes provide high torque in a compact unit:

- ▶ Static Torque capacity up to 1800 In. Lbs.
- ▶ Maximum Operating Speed up to 3600 rpm
- ▶ **Bore sizes** up to 1.875 inches
- ▶ Thermal Horsepower rating up to 0.450
- ▶ Designed to mount directly to NEMA “C” faced double shafted electric motors

CANNOT BE VERTICALLY MOUNTED

Order Brake and Hub separately

◀ CALIPER BRAKES

“Air Champ”

SINGLE PUCK BRAKES

These light duty drag brakes are perfect for custom applications where space is limited and which do not require a full caliper:

Models 625 & 1000

- ▶ **2 Piston** sizes
- ▶ “O” ring sealed, simple design for light duty tension control applications

TC Models

- ▶ **3 coefficients** of friction facings
- ▶ Diaphragm actuated, spring returned brake for tension control or low cyclic duty applications

▶ **SINGLE PUCK BRAKES**

Model	Product Number	Torque Factor (f) 80 PSI	Shipping WT. (oz.)	Clamp Force (lbs)
625 Brake*	837100	7	4	20
1000 Brake	837000	17	7	50
TC-L (LOCO)	835131	40	28	200
TC-S (Standard)	835132	70	28	200
TC-H (HICO)	835133	90	28	200

*625 Air Hose must be ordered separately; Product Number 857000

“Air Champ”

DB MODEL DISC CALIPER BRAKES

The design of this brake offers many features not found in other brakes of this type:

- ▶ Static Torque capacity up to 1040 In. Lbs. @ 80 psi w/16" Disk
- ▶ Brake Torque may be doubled or tripled by adding brake calipers
- ▶ Air Actuated DB brake ans spring engaged DBSE brake
- ▶ Arc contoured shoe provides large friction area, for greater facing life and stability
- ▶ Easily mounted in any position with T Bracket
- ▶ Disc Speeds up to 4500 rpm
- ▶ Disc Hubs use **QD Bushing** “SK” for shaft sizes from 0.5 to 2.125 inches/Standard Keyway.
- ▶ Spring return eliminates disc drag when disengaged
- ▶ Optional Air Hose Assembly comes with required fittings and hose for both air inlets

The Disc, Hub and Air Hose must be ordered separately. QD Bushing is customer furnished. Optional discs available from 10” to 16” diameter.

▶ **DB MODEL, DISC CALIPER BRAKES**

Component	Product Number	MAX Bore (In)	Torque Factor (f)	Shipping Wt. (Lbs)
DB Brake w/ T Bracket	835000	2.500	144	8
DB Brake w/o T Bracket	835071	2.500	144	8
DBSE Brake w/t Bracket	835030	2.500	181	15
Air Hose Assembly	835400	—	—	1

Air Hose must be ordered separately.
Calculated torque (T) = fR (Working Radius)

▶ **DISC & HUB OPTIONS**

The matching Hub is listed below each Disc.

Component	Product Number	Speed Up to (RPM)	Inertia Value (Lbs • in ²)	*Thermal Horsepower	Shipping Wt. (Lbs)	Working Radius (R)

BD MODEL AIR ACTUATED CALIPER BRAKES

BD Model Air Actuated Caliper Brakes provide:

- ▶ Static Torque capacity up to 19,000 In. Lbs. psi with 24 inch disc
- ▶ Air Actuated
- ▶ Actuators mount on either side of the brake
- ▶ Air connections can be rotated 360 degrees around actuator axis
- ▶ Multiply stopping power by installing more than one caliper brake per disc
- ▶ Shoes are mounted with detent pins for quick replacement
- ▶ Caliper spacing fits 0.500 inch wide discs
- ▶ SPC shoes fit on BD Model Caliper Brakes for longer life and higher peak input rate
- ▶ All pivot points have life-lubricated bearings
- ▶ Optional discs from 12 to 24 inch diameters
- ▶ Disc Speeds up to 3200 rpm with 14 inch discs
- ▶ **QD Bushing** compatible, for shaft sizes up to 3.875 inches

The Disc, Air Regulator and Valve must be ordered separately. QD Bushing is customer furnished.

▶ **BD MODEL, AIR ACTUATED CALIPER BRAKES**

Model	Product Number	Torque Factor	Shipping Wt. (Lbs)
BD, Air Actuated	933600	See Torque Chart for Values by Disc Size	35

Air Hose must be customer furnished.

▶ **DISC & QD BUSHING OPTIONS**

Discs must be ordered separately. QD Bushings are customer furnished. For additional Disc details, see pages 174 and 175. Bushings fit into the bore of the brake disc hub, changing the bore to the size needed.

Caution: QD Bushings must be capable of carrying the torque produced by the caliper brake and disc selected. Check with the QD Bushing manufacturer for bushing torque ratings.

NOTE: Air Regulator and Valve requirements will depend upon your application. Consult Nexen for proper specifications.

▶ **TORQUE VS. AIR PRESSURE**

NOTE: Dynamic torque is approximately 85% of static torque.

BD MODEL SPRING ACTUATED CALIPER BRAKES

BD Model Spring Actuated Caliper Brakes provide:

- ▶ Static Torque capacity up to 19,000 In. Lbs.
- ▶ Spring Actuated
- ▶ Actuators mount on either side of the brake
- ▶ Air connections can be rotated 360 degrees around actuator axis
- ▶ Multiply stopping power by installing more than one caliper brake per disc
- ▶ Shoes are mounted with detent pins for quick replacement
- ▶ SPC shoes fit on BD Model Caliper Brakes for longer life and higher peak input rate
- ▶ All pivot points have life-lubricated bearings
- ▶ Optional discs from 12 to 24 inch diameters
- ▶ Disc Speeds up to 3200 rpm with 14 inch discs
- ▶ **QD Bushing** compatible, for shaft sizes up to 3.875 inches

The Disc, Air Regulator and Valve must be ordered separately. QD Bushing is customer furnished.

▶ **BD MODEL, SPRING ACTUATED, AIR RELEASED, CALIPER BRAKES**

Model	Product Number	MIN Disengage Air Pressure	Shipping Wt. (Lbs)
BD, Spring Actuated, Air Released	933500	75 PSI	41

▶ **Disc & QD Bushing Options**

Discs must be ordered separately. QD Bushings are customer furnished. For additional Disc details, see pages 174 and 175. Bushings fit into the bore of the brake disc hub, changing the bore to the size needed.

Caution: QD Bushings must be capable of carrying the torque produced by the caliper brake and disc selected. Check with the QD Bushing manufacturer for bushing torque ratings.

NOTE: Air Regulator and Valve requirements will depend upon your application. Consult Nexen for proper specifications.

▶ **TORQUE VS. AIR PRESSURE**

NOTE: Dynamic torque is approximately 85% of static torque.

▶ **BD MODEL, SPRING ACTUATED, HYDRAULIC RELEASED, CALIPER BRAKES**

Model	Product Number	Torque Factor (f)	Maximum Pressure (PSI)	MIN Disengage Air Pressure (PSI)	Shipping Wt. (Lbs)
BD, Spring Actuated, Hydraulic Released	933700	2200 Lbs	1500	250	65
	933701	440 Lbs	1500	50	65
	933702	1500 Lbs	1500	170	65
	933703	650 Lbs	1500	75	65

Disc working radius (R) = DIA/2 - 1.437, For 18" Disc and larger.

Calculated Torque = fR, Example: Product 933700 with a 24" Disc; 2200 x 10.563 = 23,000 In.Lbs.

SINGLE-POST BRAKE CALIPER VC500

Nexen's VC500 caliper brakes provide:

- ▶ Spring-actuated braking and clamping force for demanding industrial machinery
- ▶ A high torque rating 4785.9 Nm [42,350 in-lb]* that is maintained throughout the life of the friction facing
- ▶ Release pressure at 4.1 bar [60 psi]
- ▶ Spring actuated for safety
- ▶ A Long cycle life using a rear linkage design that actually increases clamping force as the facings wear
- ▶ A high performance unit compact in size to fit into tight spaces on automotive conveyor systems, large converting machines, saw mills, and many other applications.
- ▶ 80% smaller than older models
- ▶ High performance piston seal
- ▶ Optimized springs
- ▶ Time savings for maintenance managers and machine builders
- ▶ Comes fully assembled and calibrated for easy installation
- ▶ Quick-release pins on friction facing shoes reduce downtime
- ▶ Additional safety guards and redundant constraints
- ▶ Corrosion resistant paint for improved aesthetics

* Maximum static torque when burnished with a 24 inch disc.

▶ VC500 SINGLE-POST BRAKE CALIPER

◀ CALIPER BRAKES

SPC MODEL AIR ACTUATED CALIPER BRAKES

SPC Single Post Caliper, Air Actuated Brake provides:

- ▶ Air Actuation
- ▶ Static Torque capability up to 50,000 In. Lbs.
- ▶ Brake actuator is moveable to permit a change in mechanical advantage which varies the torque range
- ▶ All models may be quickly and easily converted from one actuating system to another
- ▶ Arced brake shoes with quick removable pin mounting
- ▶ Pedestal style base is easily mounted in a small area
- ▶ Optional discs available from 16 to 24 inch diameter
- ▶ Disc Speeds up to 2800 rpm with 16 inch disc
- ▶ **QD Bushing** compatible, for shaft sizes up to 3.875 inches

The Brake, Actuator and Disc must be ordered separately. QD Bushing and Air Hose are customer furnished.

▶ **SPC MODEL, SINGLE POST AIR ACTUATED CALIPER BRAKE**

Ordering Information:
To achieve a complete brake assembly, you must order a Brake, the required number of Actuators and desired Disc. Performance values are dependent upon Actuator location, number of Actuators and Disc diameter. Determine performance required from the charts.

HEAT DISSIPATION - VENTILATED DISCS

Note: For maximum wear life of friction facings, operation above 450° F with standard facings should be minimized.

◀ DRUM BRAKES

“Air Champ”

MODEL J & K DRUM BRAKES

These Drum Brakes provide accurate tension control, light duty stopping, holding or continuous braking:

- ▶ Static Torque capacity up to 1200 In. Lbs. @ 80 psi
- ▶ Thermal Horsepower rating up to 0.500
- ▶ Air Actuated for accurate, economical operation
- ▶ Long wearing friction linings
- ▶ **2 Drums** for each Model, either with standard bore or no bore for customization
- ▶ Mounts directly on **shaft** or on a **self-centering mounting bracket**

Order Brake, Drum and Bracket separately for application convenience.

“Air Champ”

MODEL 8K & 12K STANDARD DRUM BRAKES

These Drum Brakes are ideal for high torque and slow speed tension control applications:

- ▶ 8 inch or 12 inch Drum size
 - ▶ Thermal Horsepower rating up to 3.000 HPt
 - ▶ Static Torque capacity up to 3750 In. Lbs. @ 80 psi
 - ▶ Each Model allows you to customize your drum bore
 - ▶ **Shaft mounted** design
 - ▶ Air Actuated for accurate, economical operation
 - ▶ Long wearing friction linings
- Order Brake and Drum separately.

▶ **MODEL 8K DRUM BRAKES**

HEAVY DUTY BRAKES

“Air Champ”

HEAVY DUTY SPRING ENGAGED BRAKE ELEMENTS DFB & QFB SERIES

This **16 Model** Series of spring engaged, air released **Dual Faced** and **Quad Faced Elements** are designed for heavy duty industrial applications requiring high torque and low inertia:

- ▶ Static Torque ratings up to 164,800 In. Lbs.
- ▶ Speeds up to 2200 rpm
- ▶ Thermal Horsepower values up to 14.7
- ▶ **Bore range** of 6.500 inches
- ▶ Brake can be **Thru-Shaft** or **Shaft-End** mounted. Units are intended for horizontal shaft mounting only
- ▶ Dual Faced Elements have two interface surfaces, Quad Faced Elements have four interface surfaces
- ▶ Available with either Standard or High coefficient friction Facings
- ▶ Single or Double Disc Assemblies available in disc sizes from 11.500 to 25.000 inches
- ▶ Rugged design ensures long product life
- ▶ O-ring sealed piston & cylinder design reduces maintenance costs
- ▶ Air is supplied directly at the cylinder air inlets

With this Heavy Duty Series, tough applications are made easy. Each of the 16 Models are detailed on the next few pages.

▶ **PEAK INPUT RATE**

The DFB and QFB Series of Brakes are designed for applications requiring high torque and low inertia. The peak input rate may be the limiting factor in high inertia starts or stops, even though the Heat Sink Capacity is efficient.

The peak input rate capacity is the rate at which the brake absorbs heat at the friction interface during the deceleration period while interfaces are slipping, or until the load and the clutch are operating at the same speed. See page 368 in the Engineering Data Section for information explaining how to calculate the Peak Input Rate and how to avoid potential problems.

▶ **HEAT SINK CAPACITIES & PEAK INPUT RATE**

Model	Heat Sink Capacity (Ft Lbs)	Peak Input Rate(HP)	Effective Interface Areas
DFB 1150-S/H	390,000	105	117 in ²
DFB 1650-S/H	870,000	204	227 in ²
DFB 2200-S/H	1,187,000	297	330 in ²
DFB 2500-S/H	1,146,000	363	404 in ²
QFB 1150-S/H	780,000	210	234 in ²
QFB 1650-S/H	1,740,000	408	454 in ²
QFB 2200-S/H	2,374,000	594	660 in ²
QFB 2500-S/H	2,920,000	727	808 in ²

▶ **CONTINUOUS RATED THERMAL HORSEPOWER DISSIPATION VS RPM**

▶ SHAFT-END MOUNTED BRAKE ELEMENT

▶ TO APPLY DFB & QFB BRAKES

Element can be Shaft-End or Thru-Shaft Mounted, but must be in a horizontal position.

The housing is flange mounted to the machine frame.

The Hub is keyed to the shaft.

Air is supplied directly at the cylinder air inlets.

Brake Air Connection:

Connect the air supply directly to the two air ports, located 180 degrees apart in the cylinder.

HEAVY DUTY BRAKES

“Air Champ”

**DFB MODEL SERIES,
SPRING ENGAGED BRAKE
ELEMENTS**

This **8 Model** Series of spring engaged, air released Dual Faced Elements are designed for heavy duty industrial applications requiring high torque and low inertia:

- ▶ Available with either Standard or High coefficient friction linings
- ▶ Available in disc sizes from 11.500 to 25.000 inches
- ▶ **Bore sizes** range up to 6.000 inches
- ▶ Static Torque ratings up to 82,400 In. Lbs.
- ▶ “O”-ring sealed piston and cylinder design reduces maintenance costs
- ▶ Speeds up to 2200 rpm
- ▶ Thermal Horsepower values up to 10.9
- ▶ Rugged design insures long product life
- ▶ Air is supplied directly at the cylinder air inlets
- ▶ Brake can be **Thru-Shaft** or **Shaft-End** mounted
- ▶ Units are intended for horizontal shaft mounting only

▶ **HOW TO ORDER DFB BRAKE ELEMENTS:**

1. Determine which bore size you will need;
2. If you require a bore size other than the standard Hub bore, you can either order this special size from Nexen or machine it yourself.

HUB BORE INFORMATION

All standard Hubs are furnished in the bore listed in dimension “U” and without keyway or set screw. The Hub bore can be increased to a size equal to the maximum diameter indicated in the table. If you need to increase the bore size of the Hub, you have two options:

1. Nexen can supply you with a specified bore and matching keyway at your request for an extra charge;
2. You can machine your own bore and keyway, with the limits listed in the table.

The following table indicates bore sizes and corresponding key and set screw sizes.

Bore Size	Key Size (sq)	Set Screw Dia.
1.000-1.250	0.250	0.312
1.312-1.375	0.312	0.375

HEAVY DUTY BRAKES

“Air Champ”

QFB MODEL SERIES,
SPRING ENGAGED BRAKE
ELEMENTS

This **8 Model** Series of spring engaged, air released Quad Faced Elements are designed for heavy duty industrial applications requiring high torque and low inertia:

- ▶ Available with either Standard or High coefficient friction linings
- ▶ Available in disc sizes from 11.500 to 25.000 inches
- ▶ **Bore sizes** range up to 6.000 inches
- ▶ Static Torque ratings up to 164,800 In. Lbs.
- ▶ “O”-ring sealed piston and cylinder design reduces maintenance costs
- ▶ Speeds up to 2200 rpm
- ▶ Thermal Horsepower values up to 14.7
- ▶ Rugged design insures long product life
- ▶ Air is supplied directly at the cylinder air inlets
- ▶ Brake can be **Thru-Shaft** or **Shaft-End** mounted
- ▶ Units are intended for horizontal shaft mounting only

Each of the 8 Models are detailed on the next 2 pages. Before looking at the details, first acquaint yourself with the important ‘how to order’ information.

▶ HOW TO ORDER QFB BRAKE ELEMENTS:

1. Determine which bore size you will need;
2. If you require a bore size other than the standard Hub bore, you can either order this special size from Nexen or machine it yourself.

Model	Product Number	Pilot Bore +.001/-.000	Max Bore	Torque Rating In. Lbs	Disc Inertia Lb. Ft ²	MAX Speed RPM	MIN Diseng. Air Pressure	Shipping Wt. (Lbs)

▶ TORQUE CAPACITIES

NOTE: Torque values for spring applied brakes will vary over the life of the brake as a function of spring force and the burnishing process of the lining. Published torque ratings are minimum values. Over the life of the linings, torque values may exceed published values by up to 40%.

HUB BORE INFORMATION

All standard Hubs are furnished in the bore listed in dimension “U” and without keyway. The Hub bore can be increased to a size equal to the maximum diameter indicated in the table. If you need to increase the bore size of the Hub, you have two options:

1. Nexen can supply you with a specified bore and matching keyway at your request for an extra charge;
 2. You can machine your own bore and keyway, within the limits listed in the table.
- The following table indicates bore sizes and corresponding key & set screw sizes.

Bore Size	Key Size (sq)	Set Screw Dia.
1.000-1.250	0.250	0.312
1.312-1.375	0.312	0.375
1.437-1.750	0.375	0.375
1.812-2.250	0.500	0.500
2.312-2.750	0.625	0.500
2.812-3.250	0.750	0.625

◀ METRIC BRAKES

“Air Champ”

METRIC S SERIES STRAIGHT BORE FRICTION BRAKES, S-450, S-600, S-800 & S-1000

- ▶ Static Torque capacity up to:
S-450/55 Nm & S-600/105 Nm
S-800/197 Nm & S-1000/420 Nm
- ▶ Maximum Operating Speed up to 1800 rpm
- ▶ Thermal capacity rating of:
S-450/380W @ 1800 rpm
S-600/970W @ 1800 rpm
S-800/1660W @ 1800 rpm
S-1000/2230W @ 1800 rpm
- ▶ Heat Sink capacity up to:
S-450 & 600/81,000 joules
S-800 & S-1000/271,000 joules

These self-adjusting air cooled brakes mount easily and come with:

- ▶ **Standard Bore Sizes:**
S-450/25 millimeters
S-600/35 millimeters
S-800/50 millimeters
S-1000/75 millimeters
 - ▶ **4 Minimum Bore Sizes** for custom machining
 - ▶ Split friction facings for easy replacement without brake removal or disassembly
 - ▶ Aluminum piston minimizes inertia for smoother response
 - ▶ Thru-shaft design can be **flange mounted** or **shaft mounted** with a torque pin
- Options and Accessories include:
- ▶ Torque Pin Bracket allows you to anchor the housing
 - ▶ Brake Safety Guard for protection

▶ METRIC S-450, S-600, S-800 & S- 1000 MODEL FRICTION BRAKES

◀ METRIC BRAKES

METRIC SSE SERIES STRAIGHT BORE SPRING ENGAGED BRAKES, MODELS SSE-450 & SSE-600

- ▶ Static Torque capacity up to:
SSE-450/50 Nm
SSE-600/110 Nm
- ▶ Maximum Operating Speed up to 1800 rpm
- ▶ **Standard Bore Sizes:**
S-450/25 millimeters
S-600/35 millimeters
- ▶ Thermal capacity rating of:
S-450/380W @ 1800 rpm
S-600/970W @ 1800 rpm
- ▶ Heat Sink capacity up to:
S-450/40,670 joules
S-600/81,000 joules

These spring engaged, air disengaged brakes mount easily and come with:

- ▶ Open spring sockets that allow you to add or remove springs to fit your torque needs
- ▶ Split friction facings for easy replacement without brake removal or disassembly
- ▶ Single plate, finned friction discs provide high heat dissipation
- ▶ High dynamic torque capacity insures fast load response
- ▶ Flow restrictor valve controls disengagement air to prevent shock load on brake components

Options include:

- ▶ Torque Pin Bracket Allows you to keep the housing from spinning
- ▶ Brake Safety Guard for protection

NEXEN XTB TENSION CONTROL BRAKES

Cool performance for hotter profits.

XTB shaft temperature at 140° F, (60° C), the shaft temperature of a competitive brake at 240° F, (115° C).

Recommended shaft bearing temperatures are normally around 170 ° F, (76° C). If this heat is not directed away, it travels back into the brake and up the shaft to the bearings. This can cause brake fade, shaft crystallization and bearing seal meltdown.

Fins on the one-piece rotor help deflect hot air and draw cool air over the brake.

your material runs all the way to the core. And your web will break even earlier when running delicate materials.

Why waste several hundred feet of product every roll due to breakage?

The new airflow path design that keeps the XTB brake cool.

The caliper fins redirect dissipated heat out into space

It's just one feature of this brake that will help generate hotter profits. Its lower weight and rotational inertia will simplify installation and reduce web waste. Quick change components make maintenance a snap. Plus, Nexen technical service, parts and accessories are only a phone call away. No other tension control brake in the industry has such a comprehensive package of features. Affordably priced, the XTB series comes in various sizes to fit your application.

With all these features, it makes you wonder why you'd consider using any other tension control brake.

Keeping cool with the XTB airflow path.

Unlike other brake designs that can direct heat back into the brake, shaft and bearings, the XTB maximizes heat dissipation by deflecting it away from the brake components.

This unique airflow design uses fins on the rotor, hub back and calipers to throw dissipated heat into space, not into the brake or shaft. The design also helps draw cooler air around and over the brake. The new, one-piece lightweight rotor pulls cool air into the brake and draws it over the air hoses so they don't overheat and crack.

Note that air hoses run along the inner, not outer, circumference of the calipers. This keeps hose lengths to a minimum, to help protect them and keep them cool.

The airflow path then directs the air over the caliper fins. These fins redirect air out and away from the assembly.

Fins on the back of the hub also draw cool air back over the calipers to help cool the friction material and hoses.

Tests run with the brakes at maximum torque show the

Less weight for lower rotational inertia

Not only is Nexen's rotor lighter than other brake rotors, the entire brake weighs 40% of what other brakes weigh for

Unwind roll dynamics

$$RPM = V/2\pi R \quad V = \text{product velocity (constant)} \\ R = \text{unwind roll radius}$$

$$I = wk^2 \quad I = \text{inertia} \\ w = \text{weight} \\ k = \text{radius}$$

up to 2/3 less rotational inertia. Lower weight and lower rotational inertia are critical because of the dynamics of the unwind roll. Tension is constant and the radius is changing constantly. Lower rotational inertia makes the XTB more precise at lower torques. This is especially important when running delicate materials that require precise tension, such as tissue or nylon.

Lower rotational inertia for less web waste

The XTB has up to 2/3 less rotational inertia than other brakes. Rotational inertia creates undesirable tension that can break your web before

Precisely control each caliper pneumatically or electronically

There are 2 pistons that activate the friction pads on each caliper. Choose up to 9 calipers per brake, depending upon brake size.

Precise control of the air pressure to the calipers generates the low to high torque range. High torque maintains the tension needs on a large roll of material. Low torque yields the delicate control needed near the core.

You get this precision control by using Nexen's Three Stage Caliper Control to divide the number of XTB calipers into three groups, or stages.

Pneumatically control these stages individually or in combination. This gives you the effect of having several brakes with different torque ranges.

For the ultimate in precision unwind control, combine the Three Stage Caliper Control with a Nexen Electronic Tension Control System. Don't risk downtime by using another brake you can't accurately control.

For precise control, choose a Nexen pneumatic or electronic controller.

Choose from a full line of controllers

Choose either single caliper or three stage caliper control for pneumatic control. For electronic control, choose from several models that vary by programmability, readout and control sophistication. Please consult Nexen for the best controller for your application.

Less weight for easier installation

40% less weight also makes XTB brakes easier to install and maintain. You will not need to adjust pad overhang or shim the pads for proper installation. A lighter brake also puts less strain on shafts, unwind rolls, bearings and stands.

Spring-loaded retaining pins make the friction pads easy to change

Friction pads change quickly without tools, springs or cotter keys.

Change the caliper friction pads by releasing two spring-loaded friction facing retaining pins that hold them in place. Replace them in seconds without tools, leaf springs, hitch pins. Pad retaining rod, pins or clips. There are no screws or cotter keys to remove or drop into the machinery. You do not even have to remove the caliper from the brake to change the friction pad.

Friction pads are completely interchangeable, so you won't need to stock different size pads for different size brakes. These features will maximize your uptime and keep maintenance simple.

Remove the disc without removing or disassembling the brake.

Change the disc without removing the brake from the shaft

Changing the disc on other brakes is no simple task. You must remove the brake from the shaft and mark the location for the new disc. Then you must disassemble it until you have enough access to remove the old disc. With the XTB, you can change the disc by pulling it from the shaft without removing the entire brake. The new disc can be installed without marking the disc location because the hub stays locked and located on the shaft.

XTB Cooling Enhancement

Increase heat dissipation at lower RPMs for increased performance without upgrading brake size. This squirrel cage fan mounts on the brake guard and blows air onto the hub and deflects heat out through the disc. Use it at lower RPMs when the rotor is less effective at dissipating heat because of the lower speed. Works on all XTB tension control brakes. Operates on 110 volts. Don't buy a larger brake just to get higher heat dissipation specifications. Try this cooling enhancement first!

Nexen Kits and Accessories

For information on Nexen kits, accessories or parts, including complete assemblies or individual rotors, hubs, mounting plates, friction pad kits or brake guards, call 800-843-7445.

Cool performance for hotter profits

The XTB brake gives you superior heat dissipation for worry-free performance, less weight for lower rotational inertia, and easier installation and maintenance. All this plus technical service from the folks who have been designing and manufacturing pneumatically actuated brakes for over 50 years. Add this to a full line of web controlling products with technical service to match and you won't go anywhere else for your web tension needs.

TENSION CONTROL BRAKES

BTBA TENSION CONTROL BRAKES

BTBA Brakes
Sizes 10 & 12

Nexen's BTBA delivers consistent tensioning in web control applications including corrugating, labeling, and printing. This innovative tension control brake offers a finned rotor with an integral fan for maximum heat dissipation. Low rotating inertia ensures proper tensioning regardless of roll size – even at core.

Designed with ease of assembly and maintenance in mind, these brakes feature long-life friction facings to limit replacement costs. The quick change feature on each facing shoe reduces downtime and maintenance expense. Intended for mounting on shaftless unwind stands and other shaft-end applications, the BTBA comes fully assembled and has a straight bore for fast and easy installation.

HIGH THERMAL CAPACITY
IN A SMALL PACKAGE

The BTBA features design improvements that ensure maximum heat capacity. An integral fan works with the finned rotor to cool the brake, while Nexen's open-design guard allows heat to dissipate away from the brake quickly. Cross-drilled holes in the rotor further increase air flow for optimal heat dissipation.

EASY INSTALLATION -
NO FLANGE REQUIRED

With simple electrical and pneumatic connections, the BTBA retrofits shaft-mounted brakes with a straight bore for quick and easy installation.

VERSATILE, PRECISE
TENSION CONTROL

The BTB utilizes multiple actuators to achieve different torque ranges across a wide range of applications.

DESIGN SIMPLICITY FOR
EASY MAINTENANCE

The BTBA is the model of simplicity. Effortlessly replace facings by pulling the spring-loaded locking pin and lifting the facing out.

THERMAL CAPACITY

Cross-drilled rotor with heat dissipating fins.

Utilizing a cross-drilled, finned rotor with an integral fan, the BTBA maximizes heat dissipation. Maximum ventilation holes in the guard allow heat to quickly dissipate away from the machine. This high thermal level helps ensure longer life and lower maintenance costs.

ADDITIONAL BTBA FEATURES

(BTBA 12 Shown)

- High torque capacity: (Standard & LoCo Facings)
BTBA-10 (Standard): 349.4 Nm [3092 in-lb]
BTBA-10 (LoCo): 174.7 Nm [1546 in-lb]
BTBA-12 (Standard): 587.6 Nm [5200 in-lb]
BTBA-12 (LoCo): 356.0 Nm [3150 in-lb]
- Fan-cooled for maximum thermal capacity:
BTBA-10: 5.6 kW [7.6 HPT]*
BTBA-12: 7.5 kW [10.0 HPT]*
- Low inertia:
BTBA-10: 0.04 kgm² [0.94 lb-ft²]
BTBA-12: 0.08 kgm² [1.90 lb-ft²]
- Maximum speed:
BTBA-10: 2000 rpm
BTBA-12: 2500 rpm
- Pneumatically actuated, bidirectional rotation
- Compact outside diameter (OD)
- Shaft-mounted design
- no precision flange required
- Diaphragm actuation - no seals to drag or o-rings to stick for improved low-end performance
- Torque control range of 50:1 using multiple actuators
- Simple connections: 120 VAC (optional 24 VDC) fan and 80 PSIG [5.5 bar] control air
- Thermal energy is dissipated into the atmosphere, not the machine frame, so your machine runs cooler.

*Braking in the counterclockwise direction reduces thermals by 10 - 15%

STB 600 AND 940 BRAKES

Superior tension control through a broad torque range.

Diagram 1: Plumbing the 600/940 with no valves

Diagram 2: Plumbing the 600/940 with three valves

Different piston sizes give you the widest range

Nexen's brakes actuate using a piston / diaphragm combination in three different sizes. There are no o-rings to stick, no seals to drag. There's nothing to hinder precise control of torque at lower operating pressures.

By engaging and disengaging various combinations of small, medium and large piston sets, you'll have a broad range of torque vs. Air pressure combinations. This gives you precise control over a wide range of torques and air pressures and lets you run a wider variety of materials on the same machine.

The STB 600 and 940 Brakes allow superior torque control for your web with Nexen's line of patented tension control brakes. Three different sized piston sets can be actuated singly, or in any combination for a large number of torque-to-air pressure ranges.

This unique design gives you precise torque control without the problems associated with operating at low air pressures.

Ventilated rotor keeps the clutch and brake cool

The ventilated rotor creates an airflow path that draws cooler ambient air into the center of the rotor. The flow path directs air past the interface and dissipates heat radially away from the unit. This keeps the unit running cooler and longer for better performance.

Features and benefits

- Fine torque control for precise tension control of web processes - 500:1 tension control range
- Field and dynamic programming of pressure/torque characteristics for flexible operations
- Diaphragm operation – no seals to drag or o-rings to stick for great low pressure performance
- Different size piston sets
- Through-shaft mounting
- Compact size
- No rotary air unions required – eliminates "gun drilling" shafts

Variable torque ranges through the use of valves

Use air valves to engage combinations of pistons as shown in Diagram 2. Read the torque value for each piston set directly from the Torque vs. Air Pressure graph on the next page and add them.

Example: STB 600

Large piston set at 40 p.s.i. has a rated torque of 95 in-lb.
Medium piston set at 40 p.s.i. has a rated torque of 67 in-lb.
Small piston set at 40 p.s.i. has a rated torque of 41 in-lb.

Total torque at 40 p.s.i.:
Large + Medium =
95 + 67 = 162 in-lb.
Small only = 41 in-lb.

The total torque range of the brake will equal the sum of the torques of the individual sets from 0 to maximum air pressure.

ADVANCED SERIES STRAIGHT & TAPERED-BORE TENSION BRAKES S450A, S600A, S800A, S1000A, T450A, T600A, T800A, T1000A

- ▶ Provide dependable, long-lasting torque for your unwind applications. The high thermal output and torque ratings of the advanced series make these units ideal for demanding tension operations.
- ▶ Full range of sizes to meet all unique specification requirements.
- ▶ Advanced Series offers both straight bore hubs or tapered bores for QD® mounting.
- ▶ Both models are available with Standard, Low Coefficient (LoCo) or Ultra LoCo friction facings to meet your torque requirements.
- ▶ ULTRA LoCo Models S-450A 827827, S-600 827926, S-800 824204, S-1000 824308
- ▶ Facings are split for fast and easy facing replacement, less downtime.
- ▶ **High Dynamic Torque** (at 5.5 bar [80 psi] air pressure) 42.3 – 331.3 Nm [374 – 2932 in-lb] with Standard Facings, 25.3 – 198.9 Nm [224 – 1760 in-lb] with LoCo Facings
- ▶ **High Thermal Capacity SA-Brakes:** 1.42 – 4.44 Kw [1.90 – 5.96 HPT] at 1800 rpm. TA-Brakes: 1.28 – 4.12 Kw [1.73 – 5.53 HPT] at 1800 rpm
- ▶ **Straight bore hub** in inch and metric sizes for easy mounting (SA only) Bore Range: 25 – 75 mm [1.125 – 2.938 in]
- ▶ **Tapered-bore hub uses QD bushings** for a variety of shaft diameters (TA only)
- ▶ **Variable mounting configurations** Flange mounting or shaft mounting with a torque pin (SA only), Shaft mounting with a torque pin (TA only)
- ▶ **Split facing** for easy replacement and low maintenance costs
- ▶ **High temperature o-rings**
- ▶ **High temperature bearing**
- ▶ **Brake guard for operator safety**

▶ **ADVANCED SERIES SA STRAIGHT-BORE & TA TAPERED-BORE TENSION BRAKES**

TECHNICAL EVALUATION FOR BRAKES

GENERAL SELECTION CALCULATIONS

1. Fill in data for Roll Diameter, Web Speed, Web Width and Tension (See chart on page 220 for suggested tension levels for various materials).
2. If tension is given as pounds per mil per inch, (as newtons per micron per mm,) then web thickness is also required data.
3. Calculate maximum and minimum web tension (T_{Wmax} and t_{Wmin}).

IMPERIAL SYSTEM (METRIC SYSTEM)

4. Calculate Torque Requirement maximum and minimum. (Calculate Web Power, Total Power and Thermal Power.)
5. Calculate Effective Cooling Speed

BRAKE SELECTION

(Refer to torque and horsepower charts on page 217.)

1. Brake must dissipate Maximum Horsepower (Power) at the Effective Cooling Speed. Use the cooling enhancement if needed.
2. Brake must be able to rotate at maximum RPM.
3. Brake must deliver both the maximum and minimum torque within its normal control range.

BRAKE SELECTION DATA

IMPERIAL SYSTEM (METRIC SYSTEM)

Roll Diameter

Max. _____ in. (_____ mm) (D)
Min. _____ in. (_____ mm) (d)

TYPICAL APPLICATIONS

Shown below are four typical mounting applications for these clutch-brakes. Any of the three design options (FMCBE, FMCBES or FMCE) can be mounted in any one of these configurations. You will find the specific product requirements listed on the catalog page for each design style.

In accordance with Nexen’s established policy of constant product improvement, the specifications contained in this document are subject to change without notice. Technical data listed in this document are based on the latest information available at the time of printing and are also subject to change without notice. CLUTCH/BRAKES

FMCBE FLANGE MOUNTED CLUTCH-BRAKES

- ▶ Available in either aluminum, electroless nickel plating or black oxide coating
- ▶ Flange or Foot mount capability
- ▶ Optional Input Unit available
- ▶ Double acting piston design prevents overlap of clutch and brake functions

Choose from **3 design options:**

FMCBE basic enclosed clutch-brake:

- ▶ **Bore/Shaft** sizes from 0.500 to 1.375 inches
- ▶ BISSC (Baking Industry) certified models, in 0.625 and 0.875 bores, available for use in “cleanroom” applications

FMCBES enclosed, spring engaged clutch-brake:

- ▶ Spring engaged brake combined with air engaged clutch

FMCE enclosed clutch:

- ▶ For clutch only applications
- ▶ Available in black oxide and nickle coating
- ▶ **Bore sizes** of 0.625 and 0.875 inches
- ▶ For additional corrosion protection, contact the factory

FMCBE FLANGE MOUNTED CLUTCH-BRAKES, TOTALLY ENCLOSED

All FMCBE clutch-brakes are totally enclosed for operation in environments where dirt, dust, moisture or other contaminants could cause power transmission components to fail. Enclosed design also prohibits worn friction material from escaping the clutch-brake and entering the process area.

FMCBEs mount directly to C-Face motors and reducers, and provide absolute control. These units fit NEMA frame sizes 48 to 215TC.

FMCBE CLUTCH-BRAKE, DESIGN STYLE COMPARISONS

The tables below show performance comparisons between the design styles. This is an overview, to aid in selection. Please refer to the product specific catalog pages prior to final determination, to ensure all features and benefits match your application.

THERMAL CAPACITIES

Thermal capacity is based upon 50% clutch and 50% brake usage. Operating speed is 1800 rpm for all data.

Model/Design Style	HP _T rating by Model Size					
	500	625	875	1125	1375	1625
FMCBE	0.10	0.14	0.18	0.33	0.44	–
FMCBES	–	0.14	0.18	0.33	0.44	–
FMCE	–	0.14	0.18	0.33	0.44	–
FMCB	–	0.14	0.18	0.33	0.44	1.19

OVERHUNG LOAD DATA

Data is based upon 50% clutch and 50% brake usage. Operating speed is 1800 rpm for all data.

FMCBE WITH INTEGRAL VALVE /LOCKING KEY CLUTCH-BRAKES – MODELS FMCBE 625 & 875

The FMCBE with Integral Valve combines a Nexen Flange mounted, totally-enclosed clutch/brake with a single solenoid 4-way spool valve mounted directly to the clutch/brake air chamber. Air pressure is directed to the piston to perform either clutch or brake functions. The FMCBE/I.V. is equipped with Nexen’s Locking Key feature. Choose from **2 Models**:

- ▶ **Bore sizes** of 0.625 and 0.875 in.
- ▶ Black oxide coating, Cooling fins
- ▶ Simplified; one product number for a clutch-brake combination, control valve and locking key feature
- ▶ Reduced number of air line connections for quicker install
- ▶ Shorter air lines for better air pressure
- ▶ Eliminates need for quick exhaust valves.
- ▶ 115 Volt is standard on FMCBE.
- ▶ The Integral Valve is available for 12, 24 and 115 volt systems
- ▶ Static Torque up to 325 In. Lbs. (brake) and 290 In. Lbs. (clutch)
- ▶ Overhung Load Cap. up to 292 Lbs.
- ▶ Design Speed up to 1800 rpm. Consult factory for higher speed
- ▶ Flange mounts directly to motors and reducers
- ▶ Compatible with C-face motors up to 2 HP
- ▶ Optional Foot Mount is available for belt drive applications
- ▶ Optional Input Unit allows you to incorporate pulleys or couplings into your application
- ▶ Single, double acting piston makes overlap impossible

FMCBE FLANGE MOUNTED CLUTCH-BRAKES, TOTALLY ENCLOSED, INTEGRAL VALVE/LOCKING KEY

Standard Clutch-Brake is Flange Mounted. Order Foot Mount set separately for belt drive applications. Order Input Unit to incorporate pulleys into your application.

FMCBE CLUTCH-BRAKES – MODELS FMCBE 625 & 875

FMCBE Flange Mounted Clutch-Brakes are designed for controlled starts and stops in hostile, dirty environments. Totally enclosed design prevents contaminants from interfering with operation of the units while keeping worn friction material from escaping into the environment. Choose from 2

Models:

- ▶ **Bore sizes** of 0.625 and 0.875 in.
- ▶ Static Torque up to 325 In. Lbs. (brake) and 290 In. Lbs. (clutch)
- ▶ Overhung Load Cap. up to 292 Lbs.
- ▶ Design Speed up to 1800 rpm. Consult factory for higher speed
- ▶ Flange mounts directly to motors and reducers
- ▶ Compatible with C-face motors up to 2 HP
- ▶ Optional Foot Mount is available for belt drive applications
- ▶ Optional Input Unit allows you to incorporate pulleys or couplings into your application
- ▶ Single, double acting piston makes overlap impossible

▶ **FMCBE FLANGE MOUNTED CLUTCH-BRAKES, TOTALLY ENCLOSED**

Standard Clutch-Brake is Flange Mounted. Order Foot Mount set separately for belt drive applications. Order Input Unit to incorporate pulleys into your application.

CLUTCH/BRAKES

“Air Champ”

FMCBE CLUTCH-BRAKES WITH LOCKING KEY FEATURE – MODELS FMCBE 625 & 875

FMCBE Flange Mounted Clutch-Brakes are designed for controlled starts and stops in hostile, dirty environments. Totally enclosed design prevents contaminants from interfering with operation of the units while keeping worn friction material from escaping into the environment. Fitted with a locking key system designed to eliminate keyway damage while providing positive connection for maximum torque in blind bore applications. The Locking Key system is an integral part of the Clutch/Brake output shaft. There is no extra installation required. Choose from **4 Models**:

- ▶ **Bore sizes** of 0.625 and 0.875 in.
- ▶ Both units available in either electroless nickel plating or black oxide coating
- ▶ Meets NEMA standard 1.26.5 for waterproof machines
- ▶ BISSC (Baking Industry) certified
- ▶ Static Torque up to 325 In. Lbs. (brake) and 290 In. Lbs. (clutch)
- ▶ Flange mounts directly to motors and reducers
- ▶ Compatible with C-face motors up to 2 HP
- ▶ Design Speed up to 1800 rpm. Consult factory for higher speed
- ▶ Optional Input Unit allows you to incorporate pulleys or couplings into your application

Special BISSC certified unit features:

- ▶ Smooth surface design prohibits bacteria buildup
- ▶ Single, double acting piston makes overlap impossible
- ▶ For additional corrosion protection, contact the factory

▶ **LOCKING KEY FEATURE FMCBE**

FLANGE MOUNTED CLUTCH-BRAKES, TOTALLY ENCLOSED

Standard Clutch-Brake is Flange Mounted. Order Foot Mount set separately for belt drive applications. Order Input Unit to incorporate pulleys into your application.

The Locking Key Bar is easily adjusted with a screwdriver. The bar screws into the output shaft, forcing the key tightly and securely into the mating keyway. Tipping of the key is prevented.

▶ **TORQUE VS. AIR PRESSURE**

NOTE: Dynamic torque is approximately 85% of static torque.

FMCB & FMCBE CLUTCH-BRAKES – MODELS 1125, 1375 & 1625

FMCBE Flange Mounted Clutch-Brakes are designed for controlled starts and stops in hostile, dirty environments. Models 1125 and 1375 enclosed design prevents contaminants from interfering with operation of the units while keeping worn friction material from escaping into the environment. Model 1625 has an open housing. Choose from **3 Models:**

- ▶ **Bore sizes** of 1.125, 1.375 and 1.625 inches
- ▶ Units available in either electroless nickel plating or black oxide coating
- ▶ Meets NEMA standard 1.26.5 for waterproof machines
- ▶ Static Torque up to 2400 In. Lbs. (brake) and 2000 In. Lbs. (clutch)
- ▶ Overhung Load Capacity up to 600 lbs.
- ▶ Design Speed up to 1800 rpm. Consult factory for higher speed
- ▶ Flange mounts directly to motors and reducers
- ▶ Compatible with C-face motors up to 20 HP
- ▶ Optional Foot Mount is available for belt drive applications
- ▶ Optional Input Unit allows you to incorporate pulleys or couplings into your application
- ▶ Single, double acting piston makes overlap impossible
- ▶ For additional corrosion protection, contact the factory

▶ **FMCB & FMCBE (TOTALLY ENCLOSED) FLANGE MOUNTED CLUTCH-BRAKES**

Standard Clutch-Brake is Flange Mounted. Order Foot Mount set separately for belt drive applications. Order Input Unit to incorporate pulleys into your application.

CLUTCH/BRAKES

“Air Champ”

FMCBES CLUTCH-BRAKES – MODELS 625 & 875

FMCBES Flange Mounted Clutch-Brakes come with a spring engaged brake and air engaged clutch. For applications where safety is a concern, this unit will engage the brake in the event of air pressure loss. Choose from **2 Models**:

- ▶ **Bore sizes** of 0.625 and .875 inches
- ▶ All units available in either electroless nickel plating or black oxide coating
- ▶ Meets NEMA standard 1.26.5 for waterproof machines
- ▶ Static Torque up to 142 In. Lbs. (brake) and 232 In. Lbs. (clutch)
- ▶ Overhung Load Capacity up to 292 pounds
- ▶ Design Speed up to 1800 rpm. Consult factory for higher speed
- ▶ Flange mounts directly to motors and reducers
- ▶ Compatible with C-face motors up to 1.5 HP
- ▶ Optional Foot Mount is available for belt drive applications
- ▶ Optional Input Unit allows you to incorporate pulleys or coupling into your application
- ▶ Single, double acting piston makes overlap impossible
- ▶ For additional corrosion protection, contact the factory

▶ **FMCBES CLUTCH-BRAKES/SPRING ENGAGED BRAKE**

Standard Clutch-Brake is Flange Mounted. Order Foot Mount set separately for belt drive applications. Order Input Unit to incorporate pulleys into your application.

CLUTCH/BRAKES

“Air Champ”

FMCBES CLUTCH-BRAKES – MODELS 1125 & 1375

FMCBES Flange Mounted Clutch-Brakes come with a spring engaged brake and air engaged clutch. For applications where safety is a concern, this unit will engage the brake in the event of air pressure loss. Choose from **2 Models**:

- ▶ **Bore sizes** of 1.125 and 1.375 inches
- ▶ All units available in either electroless nickel plating or black oxide coating
- ▶ Meets NEMA standard 1.26.5 for waterproof machines
- ▶ Static Torque up to 495 In. Lbs. (brake) and 680 In. Lbs. (clutch)
- ▶ Overhung Load Capacity up to 525 pounds
- ▶ Design Speed up to 1800 rpm. Consult factory for higher speed
- ▶ Flange mounts directly to motors and reducers
- ▶ Compatible with C-face motors up to 10 HP
- ▶ Optional Foot Mount is available for belt drive applications
- ▶ Optional Input Unit allows you to incorporate pulleys or coupling into your application
- ▶ Single, double acting piston makes overlap impossible
- ▶ For additional corrosion protection, contact the factory

▶ **FMCBES CLUTCH-BRAKES/SPRING ENGAGED BRAKE**

Standard Clutch-Brake is Flange Mounted. Order Foot Mount set separately for belt drive applications. Order Input Unit to incorporate pulleys into your application.

Model Number	Product Number	Bore (In)	HP _T Up To	OVERHUNG LOAD CAPACITY (LBS)		Shipping Wt. (Lbs)
				1200 RPM	1800 RPM	
Black Coating:						
FMCBES-1125	801625	1.125	0.33	360	240	68

CLUTCH/BRAKES

“Air Champ”

FMCE CLUTCHES

FMCE Flange Mounted Clutches are excellent in hostile, dirty environments where only a clutch is required. The totally enclosed design functions perfectly in areas where dirt, dust, moisture or other contaminants interfere. Choose from **4 Models:**

- Static Torque up to 1050 In. Lbs.
- Thermal Horsepower rating up to 0.18 @ 1800 rpm
- **Bore sizes** of 0.625 to 1.375 inches
- Available in black oxide coating
- Overhung Load Capacity up to 525 pounds
- Design Speed up to 1800 rpm. Consult factory for higher speed
- Mounts either vertically or horizontally
- Operates on static air pressure, requiring no expensive control system
- Optional Foot Mount is available for offset drive applications
- Optional Input Unit allows you to incorporate pulleys or coupling into your application

FMCE CLUTCH, TOTALLY ENCLOSED

Standard Clutch-Brake is Flange Mounted. Order Foot Mount set separately for offset drive applications. Order Input Unit to incorporate pulleys into your application.

MODULAR CLUTCH-BRAKE SYSTEM

Custom design a power transmission system to fit your specific requirements using the Nexen Modular Clutch-Brake “Building Block” System. Interchangeable modular components provide you with complete flexibility both for today’s requirements and for tomorrow’s changing needs. Construct your own Clutch, Brake or Clutch-Brake system to meet your application needs, selecting only those modules required for today’s job. Whenever plans change, you can easily add or subtract modules to construct a new application configuration. Customization through the use of standard interchangeable components saves you both time and money. The Modular Clutch-Brake System allows you almost limitless design control, provides time and cost savings, while providing you with the efficiency of air operation.

MODULAR APPLICATION CONFIGURATIONS

Four Modular Units (Brake, Drive, Input and Output) are the cornerstone of the System. Used either alone or in combination, they allow you to construct a variety of modular application configurations.

- ▶ Clutches (Input or Output)
- ▶ Brakes (Input or Output)
- ▶ Clutch-Brakes (Input or Output)

Once you’ve determined a configuration, you are provided these additional choices:

- ▶ Static Torque capacity up to 1150 In. Lbs. (Clutch) and 1550 In. Lbs. (Brake)
- ▶ Design Speed up to 1800 rpm. Consult factory for higher speed
- ▶ Thermal Horsepower rating up to 0.77 @ 1800 rpm
- ▶ 4 Standard Bore/Shaft sizes ranging from 0.625 to 1.375 inches
- ▶ Overhung Load Capacity up to 700 pounds
- ▶ Mounting flexibility: Vertically, Horizontally, Gearbox to C-Faced Motor or reducer
- ▶ Optional Foot Mount is available in 2 different designs

ADVANTAGES OF THE MODULAR SYSTEM

- ▶ Compatible with C-face motors up to 10 HP
- ▶ Operates on static air pressure for fast, dependable response, soft starts and positive stops, while eliminating the need for expensive control systems
- ▶ Less heat build-up. Special fin designed friction discs cool the interior, dissipate heat and decrease torque fade
- ▶ Longer Life through forced air cooling
- ▶ Self-adjusting clutch and brake modules get the most out of friction material; torque output is constant
- ▶ Interchangeability with electric modular units is easy, due to conformity with standard NEMA specifications

DESIGNING YOUR MODULAR SYSTEM

Designing your system is easily accomplished in 5 steps:

1. Determine the functions your system must perform -
 - Starting (Clutch configuration)
 - Stopping (Brake configuration)
 - Starting & Stopping (Clutch-Brake configuration)
2. Determine your application configuration using the Typical Application drawings on below.
3. A Modular Assembly is designated for each Application (i.e. MIB, MIDO, etc.) Modular Assemblies consist of one or more Module Units. The various Module Assemblies and the Units which comprise them are shown on page 243.

TYPICAL APPLICATIONS

INPUT BRAKE MOUNTED TO A REDUCER AND COUPLED TO A MOTOR (MIB)

INPUT CLUTCH OR INPUT CLUTCH-BRAKE MOUNTED TO A REDUCER AND COUPLED TO A MOTOR (MIDO OR MIDB)

CLUTCH-BRAKE ON C-FACED MOTOR (MDB)

INPUT CLUTCH OR INPUT CLUTCH-BRAKE WITH FOOT MOUNT (MIDO OR MIDB W/FOOT)

BRAKE MOUNTED BETWEEN MOTOR AND REDUCER (MBU)

INPUT BRAKE UNIT MOUNTED DIRECTLY TO A REDUCER (MIB)

INPUT CLUTCH OR INPUT CLUTCH-BRAKE MOUNTED DIRECTLY TO A REDUCER (MIDO OR MIDB)

CLUTCH OR CLUTCH-BRAKE UNIT MOUNTED TO A MOTOR AND REDUCER (MDO OR MDB)

BRAKE UNIT MOUNTED ON A C-FACE MOTOR (MBU)

INPUT CLUTCH OR INPUT CLUTCH-BRAKE WITH FOOT COUPLED TO A FOOT MOUNTED MOTOR (MIDO OR MIDB W/FOOT)

① Models FMCBE - 625 & 875, Shown on pages 229 - 237 are recommended for Single Phase Motors.

► OVERHUNG LOAD DATA

Values are based upon 10,000 hours of bearing life with the load one inch from pilot face.

Modular System	Module	Lbs. @ 1200 RPM	Lbs. @ 1800 RPM
625	Brake, MBU	321	281
	Output, MOU	321	281
	Input, MIU	279	244
875	Brake, MBU	321	281
	Output, MOU	321	281
	Input, MIU	279	244
1125	Brake, MBU	636	554
	Output, MOU	636	554
	Input, MIU	655	570
1375	Brake, MBU	700	610
	Output, MOU	700	610
	Input, MIU	655	570

► THERMAL CAPACITY DATA (HP_T)

Standard Modular Systems (Open Design)

► DESIGNING YOUR MODULAR SYSTEM, CONT.

4. Select the correct Modular Assembly System size.
 - Using the NEMA Motor/Frame Selection Chart, find the frame size, horsepower and output rpm of the motor you will be using. The size of the compatible Modular System is shown in the right hand column. Make a note of this number.
 - If your chosen Modular Assembly calls for a Brake (B), an Output Unit (O), an Input Unit (I) or a combination of these, consult the Overhung Load Data chart to know the limits of the Modular System Size chosen.
 - Review the Thermal Capacity chart to familiarize yourself with the rating of your chosen Modular Assembly by Size.
 - Review the Torque charts to ensure your selected System Size falls within your guidelines.

NOTE: Whenever Modular System Product values are less than your operational values, move up to a System Size to meet your specifications. Moving to a higher System Size may affect motor and frame size requirements.

CLUTCH/BRAKES

“Air Champ”

DESIGNING YOUR MODULAR SYSTEM, CONT.

5. Find your chosen System Size on the following pages. Locate your chosen Modular Assembly on the right hand column. The Product Numbers listed in the column are those components required to construct your Modular System. Order each separately.

Dimensional characteristics of each Modular Assembly can be found on the following pages.

625 MODULAR SYSTEM COMPONENTS (0.625 INCH BORE/SHAFT):

To achieve the Modular Assemblies shown for the Typical Applications:

1. Find the applicable component Model designation in the table below;
2. Order one of each of the product numbers shown in the column.

Module Component	Model Number	Product Number	Module Shipping Wt. (Lbs)	Model MBU Brake Only	Model MDO Clutch Only	Model MDB Clutch-Brake	Model MIB Input Brake	Model MIDO Input Clutch	Model MIDO-WF Input Clutch w/Foot	Model MIDB Input Clutch-Brake	Model MIDB-WF Input Clutch-Brake w/Foot
Brake Unit	MBU625	928500	18	928500	--	928500	928500	--	--	928500	928500
Drive Unit	MDU625	928600	13	--	928600	928600	--	928600	928600	928600	928600
Input Unit	MIU625	929600	7	--	--	--	929600	929600	929600	929600	929600
Output Unit	MOU625	928800	12	--	928800	--	--	928800	928800	--	--
Foot, U Shape		929300	3	--	--	--	--	--	929300	--	929300

OPTIONS FOR 625 MODULAR SYSTEM:

Optional Component	Model Number	Product Number	Shipping Wt. (Lbs)	Comments
Foot, L Shape	MDU-625	931000	3	Use in place of “U” Shaped Foot Mount.
Drip Proof Guard	MDU-625	929501	1	Product Thermal Capacity reduced to .20 HP _t
Drip Proof Guard	MBU-625	929502	1	Product Thermal Capacity reduced to .20 HP _t

875 MODULAR SYSTEM COMPONENTS (0.875 INCH BORE/SHAFT):

To achieve the Modular Assemblies shown for the Typical Applications:

1. Find the applicable component Model designation in the table below;
2. Order one of each of the product numbers shown in the column.

Module Component	Model Number	Product Number	Module Shipping Wt. (Lbs)	Model MBU Brake Only	Model MDO Clutch Only	Model MDB Clutch-Brake	Model MIB Input Brake	Model MIDO Input Clutch	Model MIDO-WF Input Clutch w/Foot	Model MIDB Input Clutch-Brake	Model MIDB-WF Input Clutch-Brake w/Foot
Brake Unit	MBU875	928000	18	928000	--	928000	928000	--	--	928000	928000
Drive Unit	MDU875	928100	13	--	928100	928100	--	928100	928100	928100	928100
Input Unit	MIU875	928400	7	--	--	--	928400	928400	928400	928400	928400
Output Unit	MOU875	928700	12	--	928700	--	--	928700	928700	--	--
Foot, U Shape		929300	3	--	--	--	--	--	929300	--	929300

OPTIONS FOR 875 MODULAR SYSTEM:

Optional Component	Model Number	Product Number	Shipping Wt. (Lbs)	Comments
Foot, L Shape	MDU-875	931000	3	Use in place of “U” Shaped Foot Mount.
Drip Proof Guard	MDU-875	929501	1	Product Thermal Capacity reduced to .20 HP _t
Drip Proof Guard	MBU-875	929502	1	Product Thermal Capacity reduced to .20 HP _t

▸ **1125 MODULAR SYSTEM COMPONENTS (1.125 INCH BORE/SHAFT):**

To achieve the Modular Assemblies shown for the Typical Applications:

1. Find the applicable component Model designation in the table below;
2. Order one of each of the product numbers shown in the column.

Module Component	Model Number	Product Number	Module Shipping Wt. (Lbs)	Model MBU Brake Only	Model MDO Clutch Only	Model MDB Clutch-Brake	Model MIB Input Brake	Model MIDO Input Clutch	Model MIDO-WF Input Clutch w/Foot	Model MIDB Input Clutch-Brake	Model MIDB-WF Input Clutch-Brake w/Foot
Brake Unit	MBU1125	935200	38	935200	--	935200	935200	--	--	935200	935200
Drive Unit	MDU1125	935100	21	--	935100	935100	--	935100	935100	935100	935100
Input Unit	MIU1125	935000	12	--	--	--	935000	935000	935000	935000	935000
Output Unit	MOU1125	935300	35	--	935300	--	--	935300	935300	--	--
Foot		936900	4	--	--	--	--	--	936900	--	936900
Motor Adapter	MBU1125	937000	1	937000	--	--	937000	--	--	--	--

▸ **OPTIONS FOR 1125 MODULAR SYSTEM:**

Optional Component	Model Number	Product Number	Shipping Wt. (Lbs)	Comments
Motor Adapter	MBU-1125	937000	1	Use when MBU Model configuration is mounted on a C Face motor alone.
Drip Proof Guard	MDU-1125	935901	1.5	Product Thermal Capacity reduced to .23 HP _f
Drip Proof Guard	MBU-1125	935902	1.5	Product Thermal Capacity reduced to .30 HP _f

▸ **1375 MODULAR SYSTEM COMPONENTS (1.375 INCH BORE/SHAFT):**

To achieve the Modular Assemblies shown for the Typical Applications:

1. Find the applicable component Model designation in the table below;
2. Order one of each of the product numbers shown in the column.

Module Component	Model Number	Product Number	Module Shipping Wt. (Lbs)	Model MBU Brake Only	Model MDO Clutch Only	Model MDB Clutch-Brake	Model MIB Input Brake	Model MIDO Input Clutch	Model MIDO-WF Input Clutch w/Foot	Model MIDB Input Clutch-Brake	Model MIDB-WF Input Clutch-Brake w/Foot
Brake Unit	MBU1375	936200	45	936200	--	936200	936200	--	--	936200	936200
Drive Unit	MDU1375	936100	30	--	936100	936100	--	936100	936100	936100	936100
Input Unit	MIU1375	936000	13	--	--	--	936000	936000	936000	936000	936000
Output Unit	MOU1375	936300	35	--	936300	--	--	936300	936300	--	--
Foot		936900	4	--	--	--	--	--	936900	--	936900
Motor Adapter	MBU1125	937000	1	937000	--	--	937000	--	--	--	--

▸ **OPTIONS FOR 1375 MODULAR SYSTEM:**

Optional Component	Model Number	Product Number	Shipping Wt. (Lbs)	Comments
Motor Adapter	MBU-1375	937000	1	Use when MBU Model configuration is mounted on a C Face motor alone.
Drip Proof Guard	MDU-1375	935901	1.5	Product Thermal Capacity reduced to .23 HP _f
Drip Proof Guard	MBU-1375	935902	1.5	Product Thermal Capacity reduced to .30 HP _f

CLUTCH/BRAKES

TORQUE Vs. AIR PRESSURE

NOTE: Dynamic torque is approximately 85% of static torque.

CLUTCH/BRAKES

“Air Champ”

MODEL BCB-275 & FCB-450 CLUTCH-BRAKES

The BCB-275 and FCB-450 are combination clutch-brakes. The BCB-275 and FCB-450 provide:

- ▶ Static Torque capacity up to 40 Nm, 350 In. Lbs. @ 5,5 Bar, 80 psi
- ▶ Maximum Operating Speed up to 3600 rpm
- ▶ Thermal Capacity ratings up to 0,22 kW, 0.30 HP_t for both the clutch and the brake

THESE CLUTCH-BRAKES MUST BE MOUNTED ON THE DRIVEN SHAFT ONLY; Brake stops the hub
Choose from **4 Models**:

- ▶ **Sheave Mount** unit comes with 1-“3V” Groove sheave
- ▶ **2 Pilot Mount** units offer **Standard bore sizes** of 0.500 and 0.625 inches
- ▶ For in-line applications, select the optional coupling half
- ▶ Better performance at lower cost
- ▶ Fewer parts and more torque
- ▶ Single piston engagement to eliminate clutch and brake overlap
- ▶ Torque capabilities to fit up to 2,2 kW, 3 HP drive motors
- ▶ Easy retrofitting of existing Nexen clutch-brakes; pilot dimensions are identical to the original Nexen clutch-brake series

▶ **MODEL BCB-275 CLUTCH-BRAKE**

Clutch-Brake Style	Product Number	Sheave Diameter mmOD [in]OD	Bore mm [in]	Key Size Sq mm [in]	Clutch Torque Nm [in-lb]	Brake Torque Nm [in-lb]	Thermal Capacity kW [HP _t]	Inertia kg-m ² [LB IN ²]	Speed max rpm	Shipping Wt. kg [Lbs]

Keys are included.

▶ **COUPLING HALF OPTIONS BCB-275**

A Coupling Half is used for in-line applications. To achieve a Pilot Mount with Coupling Half mounting configuration:

1. Select a Pilot Mount Clutch from above;
2. Select a Coupling Half from the chart below which fits your shaft requirements;
3. Order Clutch and Coupling Half separately.

Product Number	Bore Size mm [In]	Key Size Sq mm [in]	Shipping Wt. kg [Lbs]
826030	12,70 [0.500]	3,18 [0.125]	0,5 [1]
826031	15,88 [0.625]	4,78 [0.188]	0,5 [1]
826032	19,05 [0.750]	4,78 [0.188]	0,5 [1]

NOTE: Refer to pages 34 to 37 for coupling dimensions.

▶ **MODEL FCB-450 CLUTCH-BRAKE**

Clutch-Brake Style	Product Number	Bore ² mm [in]	Clutch Torque ³ Nm [in-lb]	Brake Torque ³ Nm [in-lb]	Thermal Capacity kW [HP _t]	Inertia kg-m ² [in-lb]	Speed max rpm	Shipping Wt. kg [Lbs]
Through-Shaft	827150	22,2 [0.875]	40 [350]	40 [350]	0,22 [0.30]	0,28 [6.6]	3600	7 [15]

²Accepts same bore reduction bushings as F450, L-600 and M-800 bushings. ³Torque measured at 80 psi.

▶ **COUPLING HALF OPTIONS FCB-450**

A Coupling Half is used for in-line applications. Before specifying it is important to review the maximum misalignment allowable. For FCB models, choose one of the couplings listed below.

Model	Maximum Misalignment mm [in]			Product Number	Max Bore mm [In]	Shipping Wt. kg [Lbs]	Taper Lock Bushing ¹
	Parallel	Angular	Axial				
FCB-450	0,38 [0.015]	1,02 [0.040]	3,18 [0.125]	802700	25,4 [1.000]	1,4 [3]	#1008

¹Use Dodge Taper Lock® bushings. NOTE: Refer to pages 34 to 37 for coupling dimensions.

CLUTCH/BRAKES

“Air Champ”

LSCB-44HT & 54HT STRAIGHT BORE CONVEYOR BRAKES

Nexen’s air-engaged, straight-bore series of conveyor Clutch-Brakes offer high torque in a small package. The LSCB line is ideal for soft starts on accumulating, chain-driven live-roller, or in-line conveyor applications. With a maximum Clutch torque rating of 316 Nm [2800 in-lb] and a bore range from 12 to 38 mm [0.500-1.500 in], these products can outperform the competition at a lower cost. Nexen’s conveyor lines comes standard with a pilot designed for easy sprocket mounting or can be configured for a variety of mounting applications (double-single sprocket, timing belt sprocket, v-belt sheave, plate, etc.).

- ▶ High torque: 316 Nm [2800 in-lb] at 5.5 bar [80 psi]
- ▶ Bore range: 12-38 mm [0.500-1.500 in]
- ▶ Through-shaft design with three set screws for easy mounting
- ▶ Variable mounting configurations: plate or double-single sprocket, timing belt sprocket, plate, or sheave
- ▶ Open design, improved airflow, high thermal horsepower
- ▶ Internal spline drive for trouble free disengagement performance
- ▶ Shielded ball bearings for low disengagement drag
-sealed bearings also available
- ▶ No rotary air union required
- ▶ Compact size
- ▶ Spring biased for complete disengagement
- ▶ Field repairable o-rings, facings and springs

CLUTCH/BRAKES

“Air Champ”

MODEL LCB-600 & MCB-800 CLUTCH-BRAKES

The LCB-600 and MCB-800 are combination clutch-brakes. The LCB-600 and MCB-800 provide:

- Static Torque capacity up to 124 NM, 1100 In. Lbs. @ 5,5 Bar, 80 psi
- Maximum Operating Speed up to 2000 rpm
- Thermal Capacity ratings up to 0,45 kW, 0.60 HP_t for both the clutch and the brake

THESE CLUTCH-BRAKES MUST BE MOUNTED ON THE DRIVEN SHAFT ONLY; Brake stops the hub
Choose from **2 Models**:

- For in-line applications, select the optional coupling half
- Better performance at lower cost
- Fewer parts and more torque
- Single piston engagement to eliminate clutch and brake overlap
- Torque capabilities to fit up to 7,5 kW, 10 HP drive motors
- Laboratory proven thermal capacities for fast cycle rates and large load handling capability
- Involute splines for axial motion
- Drive flange accepts components for right angle or in-line drive applications
- Easy retrofitting of existing Nexen clutch-brakes; pilot dimensions are identical to the original Nexen clutch-brake series

MODEL LCB-600 AND MCB-800 CLUTCH-BRAKE

Clutch-Brake Style	Product Number	Bore ² mm [in]	Clutch Torque ³ Nm [in-lb]	Brake Torque ³ Nm [in-lb]	Thermal Capacity kW [HP _t]	Inertia kg-m ² [LB IN ²]	Speed max rpm	Shipping Wt. kg [Lbs]

²Accepts same bore reduction bushings as F450, L-600 and M-800 bushings. ³Torque measured at 80 psi.

COUPLING HALF OPTIONS LCB-600 AND MCB-800

A Coupling Half is used for in-line applications. Before specifying it is important to review the maximum misalignment allowable. For FCB models, choose one of the couplings listed below.

Model	Maximum Misalignment mm [in]			Product Number	Max Bore mm [In]	Shipping Wt. kg [Lbs]	Taper Lock Bushing ¹
	Parallel	Angular	Axial				
LCB-600	0,38 [0.015]	1,63 [0.064]	3,18 [0.125]	804900	28,6 [1.125]	2,7 [6]	#1008
MCB-800	0,38 [0.015]	2,84 [0.112]	3,18 [0.125]	807400	63,5 [2.500]	10,4 [23]	#2517

¹Use Dodge Taper Lock® bushings. NOTE: Refer to pages 34 to 37 for coupling dimensions.

Clutch-brake with coupling option

CLUTCH/BRAKES

“Air Champ”

**CLUTCH-BRAKE MODELS
FWCB & LWCB**

The FWCB and LWCB are each an “Air Champ” clutch and an “Air Champ” brake combined into a single unit, forming a combination clutch-brake. They provide:

- ▶ Static Torque capacity up to:
 - FWCB/400 In. Lbs. @ 80 psi (brake)
 - FWCB/100 In. Lbs. @ 80 psi (clutch)
 - LWCB/400 In. Lbs. @ 80 psi (brake)
 - LWCB/350 In. Lbs. @ 80 psi (clutch)
- ▶ Maximum Operating Speed up to 1800 rpm
- ▶ Thermal Horsepower ratings of:
 - FWCB/0.25 (clutch) @ 1800 rpm
 - FWCB/ 0.52 (brake) @ 1800 rpm
 - LWCB/0.40 (clutch) @ 1800 rpm
 - LWCB/ 0.52 (brake) @ 1800 rpm

THESE CLUTCH-BRAKES MUST BE MOUNTED ON THE DRIVEN SHAFT. Brake housing must not be mounted rigidly.

Choice of Models:

- FWCB/5 Models, LWCB/7 Models
- ▶ **Sheave Mount** units are available:
 - FWCB/1-“3V” or 1-“A” Groove sheave
 - LWCB/2-“3V” or 2-“A” Groove sheave
- ▶ **Pilot Mount** units offer **Standard bore** sizes of:
 - FWCB/0.750 and 0.875 inches
 - LWCB/1.000 inches
- ▶ For in-line applications, select the optional coupling half

▶ **MODEL FWCB & LWCB CLUTCH-BRAKES**

Keys are included.

▶ **BUSHING OPTIONS
(FOR 0.875 & 1.000 BORE CLUTCH-BRAKES ONLY)**

Bushings fit into the clutch-brake, reducing the bore to the size indicated.

Bore Size	Product Number	Reduces Clutch Bore Size to (In)	Number Required	Shipping Wt.(Lbs)
0.875	827200	0.500	2	1
0.875	802500	0.625	2	1
0.875	802600	0.750	2	1
0.875	803100	No Bore/Customer machines	2	1
1.000	829000	0.625	2	2
1.000	829100	0.750	2	2
1.000	829200	0.875	2	2

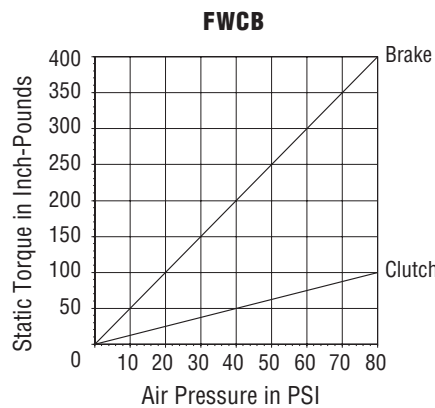

▶ **COUPLING HALF OPTIONS,
SEE PAGE 369 FOR COUPLING SPECIFICATIONS**

A Coupling Half is used for in-line applications. It is important to review the Maximum Misalignment allowable before specifying. To achieve a Pilot Mount with Coupling Half mounting configuration:

1. Select a Pilot Mount Clutch-Brake;
2. Order Clutch-Brake and Coupling Half separately.
3. Coupling Half is less taper lock bushing. Use Dodge Taper Lock® #1008/FWCB, #1215/LWCB, (0.500 to 1.000/FWCB, 0.500 to 1.125/LWCB, inch bore range). Customer furnished.

Model	Product Number	Maximum Bore Size (In)	Shipping Wt. (Lbs)
FWCB	802700	1.000	3
LWCB	804900	1.125	6

▶ **TORQUE VS. AIR PRESSURE**

NOTE: Dynamic torque is approximately 85% of static torque.

CLUTCH/BRAKES

“Air Champ”

**CLUTCH-BRAKE MODELS
MWCB & HWCB**

The MWCB and HWCB are each an “Air Champ” clutch and an “Air Champ” brake combined into a single unit, forming a combination clutch-brake. They provide:

- ▶ Static Torque capacity up to:
 - MWCB/900 In. Lbs. @ 80 psi (brake)
 - MWCB/600 In. Lbs. @ 80 psi (clutch)
 - HWCB/2800 In. Lbs. @ 80 psi (brake)
 - HWCB/2600 In. Lbs. @ 80 psi (clutch)
- ▶ Maximum Operating Speed up to 1800 rpm
- ▶ Thermal Horsepower ratings of:
 - MWCB/0.75 (clutch) @ 1800 rpm
 - MWCB/ 1.30 (brake) @ 1800 rpm
 - HWCB/1.25 (clutch) @ 1800 rpm
 - HWCB/ 2.23 (brake) @ 1800 rpm

THESE CLUTCH-BRAKES MUST BE MOUNTED ON THE DRIVEN SHAFT. Brake housing must not be mounted rigidly.

Choice of Models:

- MWCB/3 Models, HWCB/3 Models
- ▶ **Sheave Mount** units are available:
 - MWCB/3-“3V” or 2-“B” Groove sheave
 - HWCB/3-“5V” or 3-“B” Groove sheave
- ▶ **Pilot Mount** units offer **Standard bore** sizes of:
 - MWCB/1.437 and 1.500 inches
 - HWCB/1.688 and 1.875 inches
- ▶ For in-line applications, select the optional coupling half

CLUTCH/BRAKES

“Air Champ”

MODEL FCDB CLUTCH-DISC CALIPER BRAKES

Easily combine an F-450 “Air Champ” clutch with a DB Model Caliper Disc brake to create a clutch-disc caliper brake. THIS COMBINATION MOUNTS ON THE DRIVING SHAFT.

Clutch features:

- ▶ Static Torque capacity up to 140 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 3600 rpm
- ▶ Thermal Horsepower rating of 0.30 @ 3600 rpm
- ▶ Heat Sink capacity of 30,000 Ft. Lbs.
- ▶ Choose from either **Pilot Mount** or **Sheave Mount** styles with **Standard Bore sizes** of 0.750 and 0.875

Caliper Brake features:

- ▶ Static Torque capacity up to 600 In. Lbs. @ 80 psi
- ▶ Additional Calipers may be added to increase the brake torque
- ▶ Arc contoured shoe provides large facing area, for greater facing life and stability
- ▶ Mounts easily in any position with T-Bracket
- ▶ Available with 10 inch disc
- ▶ Disc Speed up to 3600 rpm
- ▶ Spring return eliminates disc drag when disengaged

All components must be ordered separately.

▶ **MODEL FCDB CLUTCH-DISC-CALIPER BRAKES**

1. Determine the Clutch style desired;
2. Order Clutch, Brake, Brake Hose and Disc separately to complete your assembly;
3. Additional Calipers can be added to increase brake torque .

Clutch Style	Product Number	Sheave Diameter	Bore (In)	Key Size (SQ)	Shipping Wt. (Lbs)
Clutch, Pilot Mount	802855	--	0.750	0.188	10
Clutch, Pilot Mount	802850	--	0.875	0.188	12
Clutch, Sheave Mount 1-“3V”	802810	3.35 OD	0.875	0.188	10
Clutch, Pilot w/Coupling Half	<i>Select a Pilot Mount and a Coupling Half to achieve this style of mount.</i>				
Caliper Brake w/T Bracket	835000				8
Brake Air Hose Assembly	835400				2
Disc, 10” OD	855900				3

Keys are included.

▶ **BUSHING OPTIONS (FOR 0.875 BORE CLUTCHES ONLY)**

Bushings fit within the bore of the existing clutch, reducing the bore to the amount indicated.

Product Number	Reduces Clutch Bore Size to (In)	Shipping Wt. (Lbs)
827200	0.500	1
802500	0.625	1
802600	0.750	1
803100	No Bore/Customer machines	1

▶ **COUPLING HALF OPTIONS, SEE PAGE 369 FOR COUPLING SPECIFICATIONS**

A Coupling Half is used for in-line applications. It is important to review the Maximum Misalignment allowable before specifying. To achieve a Pilot Mount with Coupling Half mounting configuration:

1. Select a Pilot Mount Clutch-Brake from above;
2. Order Clutch, Brake and Coupling Half separately.
3. Coupling Half is less taper lock bushing. Use Dodge Taper Lock® #1008 (0.500 to 1.000 inch bore range). Customer furnished.

Product Number	Maximum Bore Size (In)	Shipping Wt. (Lbs)
802700	1.000	3

▶ **TORQUE VS. AIR PRESSURE**

NOTE: Dynamic torque is approximately 85% of static torque.

CLUTCH/BRAKES

“Air Champ”

MODEL LCDB CLUTCH-DISC CALIPER BRAKES

Easily combine an L-600 “Air Champ” clutch with a DB Model Caliper Disc brake to create a clutch-disc caliper brake. THIS COMBINATION MOUNTS ON THE DRIVING SHAFT.

Clutch features:

- ▶ Static Torque capacity up to 370 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 3600 rpm
- ▶ Thermal Horsepower rating of 0.75 @ 3600 rpm
- ▶ Heat Sink capacity of 60,000 Ft. Lbs.
- ▶ Choose from either **Pilot Mount** or **Sheave Mount** styles with **standard bore** sizes of 1.000 and 1.125 inches

Caliper Brake features:

- ▶ Static Torque capacity up to 750 In. Lbs. @ 80 psi
- ▶ Additional calipers may be added to increase the brake torque
- ▶ Arc contoured shoe provides large facing area, for greater facing life and stability
- ▶ Mounts easily in any position with T-Bracket
- ▶ Available with 10 or 12 inch disc
- ▶ Disc Speed up to 3600 rpm
- ▶ Spring return eliminates disc drag when disengaged

All components must be ordered separately.

▶ **MODEL LCDB CLUTCH-DISC-CALIPER BRAKES**

1. Determine the Clutch style desired;
2. Order Clutch, Brake, Brake Hose and Disc separately to complete your assembly;
3. Additional Calipers can be added to increase brake torque .

CLUTCH/BRAKES

“Air Champ”

MODEL MCDB CLUTCH-DISC CALIPER BRAKES

Easily combine an M-800 “Air Champ” clutch with a DB Model Caliper Disc brake to create a clutch-disc caliper brake. THIS COMBINATION MOUNTS ON THE DRIVING SHAFT.

Clutch features:

- ▶ Static Torque capacity up to 960 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 1800 rpm
- ▶ Thermal Horsepower rating of 1.00 @ 1800 rpm
- ▶ Heat Sink capacity of 110,000 Ft. Lbs.
- ▶ Choose from either **Pilot Mount** or **Sheave Mount** styles with **standard bore** sizes of 1.438 and 1.625 inches

Caliper Brake features:

- ▶ Static Torque capacity up to 875 In. Lbs. @ 80 psi
- ▶ Additional calipers may be added to increase the brake torque
- ▶ Arc contoured shoe provides large facing area, for greater facing life and stability
- ▶ Mounts easily in any position with T-Bracket
- ▶ Available with 12 or 14 inch disc
- ▶ Disc Speed up to 1800 rpm
- ▶ Spring return eliminates disc drag when disengaged

All components must be ordered separately.

▶ **MODEL MCDB CLUTCH-DISC-CALIPER BRAKES**

CLUTCH/BRAKES

“Air Champ”

MODEL HCDB CLUTCH-DISC CALIPER BRAKES

Easily combine an H-1000 “Air Champ” clutch with a DB Model Caliper Disc brake to create a clutch-disc caliper brake. THIS COMBINATION MOUNTS ON THE DRIVING SHAFT.

Clutch features:

- ▶ Static Torque capacity up to 2800 In. Lbs. @ 80 psi
- ▶ Maximum Operating Speed up to 1800 rpm
- ▶ Thermal Horsepower rating of 2.25 @ 1800 rpm
- ▶ Heat Sink capacity of 230,000 Ft. Lbs.
- ▶ Choose from either **Pilot Mount** or **Sheave Mount** styles with **standard bore** sizes of 1.688 and 1.875 inches

Caliper Brake features:

- ▶ Static Torque capacity up to 1025 In. Lbs. @ 80 psi
- ▶ Additional calipers may be added to increase the brake torque
- ▶ Arc contoured shoe provides large facing area, for greater facing life and stability
- ▶ Mounts easily in any position with T-Bracket
- ▶ Available with 16 inch disc
- ▶ Disc Speed up to 1800 rpm
- ▶ Spring return eliminates disc drag when disengaged

All components must be ordered separately.

▶ **MODEL HCDB CLUTCH-DISC-CALIPER BRAKES**

1. Determine the Clutch style desired;
2. Order Clutch, Brake, Brake Hose and Disc separately to complete your assembly;
3. Additional Calipers can be added to increase brake torque .

METRIC FLANGE MOUNTED CLUTCH-BRAKES

Choose from **3 design options:**

FMCB basic open clutch-brake:

- ▶ Available in black oxide coating
- ▶ **Bore/Shaft** sizes from 19 to 42 millimeters
- ▶ Flange or Foot mount capability
- ▶ Optional Input Unit for use with pulleys and couplings

FMCBE basic enclosed clutch-brake:

- ▶ Available in either electroless nickel plating or black oxide coating
- ▶ **Bore/Shaft** sizes from 14 to 42 millimeters
- ▶ Flange or Foot mount capability
- ▶ Optional Input Unit for use with pulleys or couplings

FMCBES enclosed, spring engaged clutch-brake:

- ▶ Spring engaged brake combined with air engaged clutch
- ▶ Double acting piston design prevents overlap of clutch and brake functions
- ▶ Available in either electroless nickel plating or black oxide coating
- ▶ **Bore/shaft sizes** from 14 to 42 millimeters
- ▶ Flange or Foot mount capability
- ▶ Optional Input Unit for use with pulleys or couplings

▶ **METRIC FLANGE MOUNTED CLUTCH-BRAKES**

Metric Flange Mounted Clutch-Brakes are available in both an Open and an Enclosed design. The Open Design promotes improved air circulation for longer life and greater operating efficiency. The Enclosed design keeps dirt, dust, moisture and other contaminants out and worn friction material from escaping

These clutch-brakes mount directly to IEC-Face motors and reducers and provide absolute control. These units fit IEC frame sizes 71A to 160M.

▶ **DESIGN STYLE COMPARISONS**

The tables below show performance comparisons between the design styles. This is an overview, to aid in selection. Please refer to the specific product catalog pages prior to final determination, to insure all features and benefits match your application.

▶ **THERMAL CAPACITIES**

Thermal capacity is based upon 50% clutch and 50% brake usage. Operating speed is 1500 rpm for all data.

Model/Design Style	Watts rating by Model Size					
	14	19	24	28	38	42
FMCBE	104	134	134	246	328	328
FMCBES	104	134	134	246	328	328
FMCB	--	370	370	670	670	850

▶ **OVERHUNG LOAD DATA**

Data is based upon 50% clutch and 50% brake usage. Operating speed is 1500 rpm for all data.

Model/Design Style	Weight (Kg) rating by Model Size					
	14	19	24	28	38	42
FMCBE	35	100	95	95	120	135
FMCBES	35	100	95	95	120	135
FMCB	--	100	95	95	120	135

▶ **STATIC TORQUE CAPACITY**

Data is based upon maximum achieved at 6 Bars at psi.

Model/Design Style	Torque (Nm) rating by Model Size						
	14	19	24	28	7-38	8-38	42
FMCBE	25	33	33	85	125	167	270
FMCBES	10	18	18	32	46	74	107
FMCB	--	33	33	85	125	167	270
Clutch:							
FMCBE	22	33	33	77	110	151	240
FMCBES	18	27	27	44	64	72	105
FMCB	--	33	33	77	110	151	240

▶ **TYPICAL APPLICATIONS**

Shown are four typical mounting applications for these clutch-brakes. Any of the three design options (FMCBE, FMCBES or FMCE) can be mounted in any one of these configurations. You will find the specific product requirements listed on the catalog page for each design style.

FLANGE MOUNTED

FLANGE MOUNTED WITH INPUT UNIT

FLANGE MOUNTED

FLANGE MOUNTED WITH INPUT UNIT

METRIC FMCBE CLUTCH-BRAKES – MODELS 70-14

FMCBE Flange Mounted Clutch-Brakes are designed for controlled starts and stops in hostile, dirty environments. Totally enclosed design prevents contaminants from interfering with operation of the units while keeping worn friction material from escaping into the environment.

- ▶ Compatible with IEC-B14 face motors up to kW-56
- ▶ Static Torque up to 10 Nm (brake) and 10 Nm (clutch)
- ▶ Overhung Load Capacity up to 32 kilograms
- ▶ Design Operating Speed up to 3600 R.P.M.
- ▶ Flange mounts directly to motors and reducers
- ▶ FMCBE with Integral Valve combines a Flange mounted, totally-enclosed clutch/brake with a single solenoid 4-way spool valve mounted directly to the clutch/brake air chamber. Air pressure is directed to the piston to perform either clutch or brake functions.
- ▶ Eliminates need for quick exhaust valves
- ▶ 115 Volt is standard on FMCBE
- ▶ The Integral Valve is available for 12, 24 and 115 volt systems
- ▶ Available in black oxide coating
- ▶ Simplified; one product number for a clutch-brake combination control valve
- ▶ Reduced number of air line connections for quicker install

▶ **METRIC FMCBE CLUTCH-BRAKES, TOTALLY ENCLOSED**

Model Number	Product Number	Valve Voltage	Shaft/Bore (mm)	Thermal Capacity Up To	OVERHUNG LOAD CAPACITY (kg) 1500 RPM	Shipping Wt. (kg)
FMCBE-70-14	801360	N/A	14	75W	32	5
FMCBE-70-14/IV	801361	115V	14	75W	32	5.4

NOTE: Thermal Capacity (HP_c) and Overhung Load data is based upon 50% clutch and 50% brake usage.

▶ **IEC MOTOR/FRAME SELECTION CHART**

Use this chart as specification and operational criteria for your application.

HP/KW of Motor	RPM	Frame Number	Motor Shaft (mm)
.25/.33	3450	D71C	14
.25/.33	1725	D71C	14
.37/.50	3450	D71C	14
.37/.50	1725	D71C	14
.56/.75	3450	D71C	14

▶ **TORQUE VS. AIR PRESSURE**

NOTE: Dynamic torque is approximately 85% of static torque.

Torque (In. Lbs.) = Nm x 8.849
PSI = Bar ÷ .0689

▶ **METRIC FMCBE CLUTCH-BRAKES, APPROXIMATE DIMENSIONS**

▶ **METRIC FMCBE INTEGRAL VALVE CLUTCH-BRAKES, APPROXIMATE DIMENSIONS**

METRIC CLUTCH/BRAKES

“Air Champ”

METRIC FMCB CLUTCH-BRAKES – MODELS 130-19 & 130-24

FMCB Flange Mounted Clutch-Brakes with their open design, promote improved air circulation. Heat build-up and torque fade is reduced, providing longer life and greater operating efficiency. Choose from

2 Models:

- ▶ **Bore sizes** range from 19 to 24 millimeters
- ▶ Available in black oxide coating
- ▶ Static Torque up to 33 Nm (brake) and 33 Nm (clutch)
- ▶ Overhung Load Capacity up to 150 kilograms
- ▶ Design Speed up to 1500 rpm. Consult factory for higher speed
- ▶ Flange mounts directly to motors and reducers
- ▶ Compatible with IEC-B5 face motors up to 1,5 KW
- ▶ Optional Foot Mount is available for belt drive applications
- ▶ Optional Input Unit allows you to incorporate pulleys or coupling into your application

▶ METRIC FMCB CLUTCH-BRAKES, OPEN DESIGN

Standard Clutch-Brake is Flange Mounted. Order Foot Mount separately for belt drive applications. Order Input Unit to incorporate pulleys into your application.

METRIC CLUTCH/BRAKES

“Air Champ”

METRIC FMCB CLUTCH-BRAKES – MODELS 7-28 & 7-38

FMCB Flange Mounted Clutch-Brakes with their open design, promote improved air circulation. Heat build-up and torque fade is reduced, providing longer life and greater operating efficiency. Choose from **2 Models**:

- ▶ **Bore sizes** range from 28 to 38 millimeters
- ▶ Available in black oxide coating
- ▶ Static Torque up to 125 Nm (brake) and 110 Nm (clutch)
- ▶ Overhung Load Capacity up to 180 kilograms
- ▶ Design Speed up to 1500 rpm. Consult factory for higher speed
- ▶ Flange mounts directly to motors and reducers
- ▶ Compatible with IEC-B5 face motors up to 5,5 KW
- ▶ Optional Foot Mount is available for belt drive applications
- ▶ Optional Input Unit allows you to incorporate pulleys or coupling into your application

METRIC FMCB CLUTCH-BRAKES, OPEN DESIGN

Standard Clutch-Brake is Flange Mounted. Order Foot Mount separately for belt drive applications. Order Input Unit to incorporate pulleys into your application.

METRIC CLUTCH/BRAKES

“Air Champ”

METRIC FMCBE CLUTCH-BRAKES MODELS 110-14, & 130-19 & 130-24

FMCBE Flange Mounted Clutch-Brakes are designed for controlled starts and stops in hostile, dirty environments. Totally enclosed design prevents contaminants from interfering with operation of the units while keeping worn friction material from escaping into the environment.

Choose from **2 Models**:

- ▶ **Bore sizes** range from 14 to 24 millimeters
- ▶ All units available in either electroless nickel plating or black oxide coating
- ▶ Meets NEMA standard 1.26.5 for waterproof machines
- ▶ Static Torque up to 33 Nm (brake) and 33 Nm (clutch)
- ▶ Overhung Load Capacity up to 150 kilograms
- ▶ Design Speed up to 1500 rpm. Consult factory for higher speed
- ▶ Flange mounts directly to motors and reducers
- ▶ Compatible with IEC-B5 face motors up to 1,5 KW
- ▶ Optional Foot Mount is available for belt drive applications
- ▶ Optional Input Unit allows you to incorporate pulleys or coupling into your application
- ▶ For additional corrosion protection, contact the factory

▶ METRIC FMCBE CLUTCH-BRAKES, TOTALLY ENCLOSED

Standard Clutch-Brake is Flange Mounted. Order Foot Mount separately for belt drive applications. Order Input Unit to incorporate pulleys into your application.

“Air Champ”

METRIC FMCBE CLUTCH-BRAKES – MODELS 8-38 & 8-42

FMCBE Flange Mounted Clutch-Brakes are designed for controlled starts and stops in hostile, dirty environments. Totally enclosed design prevents contaminants from interfering with operation of the units while keeping worn friction material from escaping into the environment. Choose from **2 Models:**

- ▶ **Bore sizes** range from 38 to 42 millimeters
- ▶ All units available in either electroless nickel plating or black oxide coating
- ▶ Meets NEMA standard 1.26.5 for waterproof machines
- ▶ Static Torque up to 240 Nm (brake) and 220 Nm (clutch)
- ▶ Overhung Load Capacity up to 200 kilograms
- ▶ Design Speed up to 1500 rpm. Consult factory for higher speed
- ▶ Flange mounts directly to motors and reducers
- ▶ Compatible with IEC-B5 face motors up to 11 KW
- ▶ Optional Foot Mount is available for belt drive applications
- ▶ Optional Input Unit allows you to incorporate pulleys or coupling into your application
- ▶ For additional corrosion protection, contact the factory

METRIC FMCBE CLUTCH-BRAKES, TOTALLY ENCLOSED

Standard Clutch-Brake is Flange Mounted. Order Foot Mount separately for belt drive applications. Order Input Unit to incorporate pulleys into your application.

“Air Champ”

METRIC FMCBES CLUTCH-BRAKES – MODELS 110-14, 130-19 & 130-24

FMCBES Flange Mounted Clutch-Brakes come with a spring engaged brake and air engaged clutch, making overlap of functions impossible. For applications where safety is a concern, this unit will engage the brake in the event of air pressure loss. Choose from **3 Models:**

- ▶ **Bore sizes** range from 14 to 24 millimeters
- ▶ All units available in either electroless nickel plating or black oxide coating
- ▶ Meets NEMA standard 1.26.5 for waterproof machines
- ▶ Static Torque up to 18 Nm (brake) and 27 Nm (clutch)
- ▶ Overhung Load Capacity up to 150 kilograms
- ▶ Design Speed up to 1500 rpm. Consult factory for higher speed
- ▶ Flange mounts directly to motors and reducers
- ▶ Compatible with IEC-B5 face motors up to 1,5 KW
- ▶ Optional Foot Mount is available for belt drive applications
- ▶ Optional Input Unit allows you to incorporate pulleys or coupling into your application
- ▶ For additional corrosion protection, contact the factory

▶ METRIC FMCBES CLUTCH-BRAKES, ENCLOSED DESIGN - SPRING ENGAGED BRAKE

Standard Clutch-Brake is Flange Mounted. Order Foot Mount separately for belt drive applications. Order Input Unit to incorporate pulleys into your application.

◀ TENSION CONTROLS

RSTC1000 Tension Controller

Nexen's RSTC Tension Controllers are a closed loop, load cell based tension control products which use torque to control the tension of paper, film, foil, or fabric in all zones of web processing machines.

The RSTC uses an adaptive control algorithm to adjust internal gain values, resulting in a simple system with the inherent robustness of more complicated systems that rely on many external sensors and signals.

The RSTC1000 can be DIN rack mounted or panel mounted inside a machine control cabinet alongside other controllers. The RSTC1000 with Modbus RTU and the RSTC1100 with Profibus DPV1 communication protocols can communicate with HMIs and PLCs. For machines without a HMI, the RSTC Operator Panel (ROP), used with the RSTC1000, can be installed in a convenient location for the operator.

Features and benefits

- Tune once, then forget
- Smart Splicing – splice different size rolls without adjustment
- RSTC controls the torque output of brakes, clutches, and AC/DC drives
- Controller setup and tuning are performed at initial start-up from a customer's PC or HMI
- RSTC utilizes an adaptive control algorithm
- Software to set, tune and diagnose the RSTC is downloadable from the Nexen website
- ROP can be mounted anywhere on the machine
- RSTC and ROP are CE compliant
- The ROP has a text display with no menus, therefore, operators do not have to navigate menu structures or decode cryptic messages
- Each control on the ROP has only one function, simplifying operator training and use
- ROP supports easy storage and retrieval of parameters for frequently run jobs
- The ROP adjusts job parameters only, so operators cannot modify controller setup or tuning parameters
- Power supply, +24 VDC

TC 820 Tension Controller

Nexen's TC 820 Tension Controller is the central component of a closed loop tension control system that includes the controller, tension sensors, external controls and indicators and a clutch, brake or drive. The

system maintains uniform web tension in machinery that prints or converts web materials including paper, film, foil, cellophane, textiles, non-wovens, metal strip and rubber.

Features and benefits

- Both 4-20 mA and 0-10 VDC outputs in one unit—one controller for all your needs. Interface with pneumatic, hydraulic or electric clutches, brakes or drives.
- Tension selection at the push of a button—easy to operate.
- Remote tension inputs—Set tensions directly from external sources. (PC's, PLC's)
- Simple to setup, calibrate and operate—no need for costly external technicians.
- 16 LED control output display—keeps operator informed.
- Calibration lockout circuitry is standard— prevents unauthorized calibration changes.
- Operates using LVDT or strain gauge tension sensor signals—one controller for all sensors.
- Affordable—easy to justify cost.
- Set up and calibration from central control panel—ease of set up and calibration.
- Digital tension display—easy to read.

How the TC820 Tension Controller works.

The TC 820 Tension Controller receives an input signal from one or two Nexen tension sensors. These sensors can be LVDT or strain gauge-type sensors. The controller amplifies and adds both these signal values together. The sum of these combined signals is then compared to the desired setpoint tension level. The difference

between these two signals is the "deviation." The TC 820 reduces the deviation to zero by increasing or decreasing the output signal.

Two tension sensors are normally placed one on either end of a sensing roll. This eliminates errors caused by a difference in tension from one side of the

web to the other. Narrow web sensing can be done using only one sensor.

You choose whether the output signal is 4-20, mA, or 0-10 VDC depending on the needs of the interface element. The 4-20 mA signal is used with the Nexen Electro-Pneumatic Converters, which vary output

air pressure in direct relation to the variable input signal from the TC 820. This output air pressure can be used to actuate a pneumatic brake, clutch or motor. The 4-20 mA or 0-10 VDC output signal can interface with variable speed motors, controllers, or other elements such as the power supply for electric brakes or clutches.

Applications

Unwind Control

Center Wind Drive Control

Center Wind Clutch Control

Mid-process Control

INPUTS	Sensor Input	MB or SW tension sensors
	External tension setpoint Input*	0 to 10 VDC (input impedance: 200kΩ)
CUSTOMER SUPPLIED INPUTS	Auto trigger	Maintained contact, rated at (30 VDC, <0.2Ω)
	Splicing Contact*	Momentary contact, rated at (30 VDC, <0.2Ω)
OUTPUT	Tension Error Signal*	30V DC 0.2A or 100V AC 0.2A (resistance load)

*Special features not required for typical applications. Use as necessary.

MB SERIES TENSION SENSORS

Precise, accurate measurement of web tension

LVDT coil, the output of the coil varies directly with the core movement, which varies directly with the force F . The output is thus proportional to F .

The mechanical structure of the torsion bar and the mechanical limit stops on the load plate allow the MB Sensors to survive 100-to-1 overloads without structural failure or variance in calibration.

The LVDT housing also contains a high-frequency oscillator circuit which guarantees excellent linearity and a thermal compensating circuit which ensures zero thermal drift when used within the stated temperature range.

MB Series Tension Sensors

The MB Series of load cells uses an LVDT type sensor to convert tension into a proportional electrical signal. The LVDT system provides precise, accurate tension measurement while the mechanical design allows for extremely high overloads without damage to the unit.

Features

- Extremely accurate LVDT type sensor
- Mountable at any angle
- Suitable for either symmetrical or asymmetrical web path angles
- Capable of taking extreme overloads without structural damage or loss of calibration
- Simplified mechanical structure
- No calibration or maintenance required

Function

As web tension increases, the resultant force F (see Figure 1) also increases. This causes the load plate to rotate minutely around the pivot point. This pivot point is a torsion bar which resists the force F . Due to leverage advantage, actual sensing roll movement is quite small. Movement of the core in the LVDT is proportionately larger,

as the core moves within the

Cables

Standard cable (16 ft. [5m]) provided with each sensor. Optional cables listed below, purchased separately.

Sizing

Two factors affect Sensor Sizing. The sensor must be able to measure the Force (F) created by the Web Tension (T) wrapping the roll at given angle. The sensor must also support the tare weight of the sensing roll and bearings. These two factors are independent of one another and must be calculated separately.

Force Calculation

Symmetrical Wrap

$$F = 2T \cdot \cos A/2$$

Asymmetrical Wrap

$$F = (T \cdot \cos X) + (T \cdot \cos Y)$$

Load range per sensor (see spec. chart next page) is F divided by the number of points supporting the load, i.e. two support points in bilateral, Unilateral or Cantilevered configuration, or one support point in Narrow Web or Wire and Filament configuration. Tare per sensor (see spec. chart next page) is calculated the same way. The tare per sensor is the total weight of the sensor roll and the bearings divided by the number of support points.

Warning

Tare capacity can decrease by up to 50% when sensors are mounted vertically or at an angle (see items B and D under "Sensor Mounting" next page). Reduce tare per sensor rating in spec. chart by 50% or contact the factory.

Contact Nexen or your Nexen distributor or representative if you have any question about sensor sizing.

Installation

Sensor Configuration

Bilateral - Standard arrangement used on most machines. Sensing tension on both ends provides maximum sensitivity and eliminates sensing errors due to tension variation from edge to edge.

Unilateral - More economical sensing method. Not recommended for webs over 14 inches (355,6mm) wide or on machines where the web is run off center.

Narrow Web - Useful on narrow web machines. Should not be used where roll face exceeds six inches.

Cantilevered Rolls - MB Sensor mounted on support bracket to machine frame.

Wire or Filament

- Similar to narrow web style. For tension in excess of 2 lbs. (0,09 kg).

For tensions less than two pounds multiply the force with leverage. $F = 2T(Y/X)$

MB SERIES TENSION SENSORS

Sensor Mounting

Mounting dimensions for the five frame sizes are given on previous pages. Sensors may be mounted at any angle (see Figures A-D).

All sensors include a 16 ft. (5M) cable which may be extended with 18 AWG 4 conductor shielded cable to as long as 500 ft. (152M). Presized, Extension Cables are also available. (see Page 298).

All sensors must be mounted according to the following guidelines:

1. Flatness must be 0.002" (0.05 mm) over the length of the sensor. This can be achieved by milling of the mounting surface.

NOTE: Any shimming required for sensor roll leveling must be done between sensor and pillow block. Never shim between sensor and sensor mounting surface.

2. Sensor roll span must equal sensor span. This is achieved by securing the sensor to the mounting surface, then the pillow block bearings to the sensors, and finally the bearings to the sensor roll shaft (see Fig. E).

3. When sensors are mounted to a base of material different than that of the sensor roll, i.e. aluminum roll, steel mounting base; secure only one pillow block bearing to the roll shaft. This will allow for different rates of thermal expansion (see Fig. E).

4. Mounting surfaces must be parallel. Self centering pillow block bearings are required to take up any variations in parallelism (see Fig. F).

Figure A

B

C

D

Figure E

Figure F

Figure G
MB II

NOTE: Noncompliance with these condi-

Figure H
MB 25

tions will induce heavy side loads within the sensor. This will cause hysteresis, and the sensor will measure mechanical resistance rather than tension load.

MB 05, MB 11 and MB 25 only

MB05 is normally mounted using the side mounting plate and cap screws provided with the unit.

MB 11 and MB 25 may be mounted on customer supplied wall mounting brackets. (See figures G & H).

All three sizes may be mounted for either normal or reverse web wrap. The tension induced force (F) is calculated the same in both cases and the allowable load range per sensor (see chart page 3) does not change.

MB 33 and MB 41

Due to the high forces generated by webs needing MB 33 and 41 load cells, reverse wrap is not recommended.

Due to the high forces generated, side wall mounting is not recommended.

Contact Nexen or your Nexen distributor or representative if you have any question about sensor sizing.

Installation

Sensor Location

Figures 3

Correct Location

Figure (3) illustrates correct sensor location for winding or unwinding control. One transport roll (A) located between the sensors and roll stand serves to fix the web angle over the sensor roll.

Figure (4) illustrates angular changes as the roll changes diameter during processing.

Figure 4

Incorrect Location

These angular changes will cause incorrect readings from the Tension sensors and must be avoided by use of roll (A) (see Fig. 3).

Figure (5) illustrates a common mistake in sensor mounting. In this configuration, the "S" wrap drive will effectively isolate tension into two zones, T₁ and T₂. A nip roll at the same position would provide the same isolation. The roll stand brake or clutch can only control tension in T₁ zone. Since

Figure 5

the sensors are mounted in the T₂ zone, they can not sense any tension changes caused by the roll stand and can not be used for closed loop control. The sensors must be moved to position "A" for proper control of the roll stand and T₁ tension.

Contact Nexen or your Nexen distributor or representative if you have any question about sensor sizing.

SIDEWALL MOUNT TENSION SENSOR

Measures web tension in unwind, intermediate and rewind applications

Sidewall mount strain gauges for accurate tension sensing. Nexen's line of sidewall mounting tension sensors measure the web tensions in unwind, intermediate and rewind applications. Use them in applications where sidewall mounting is required in conjunction with Nexen's line of tension controllers.

Features and Benefits

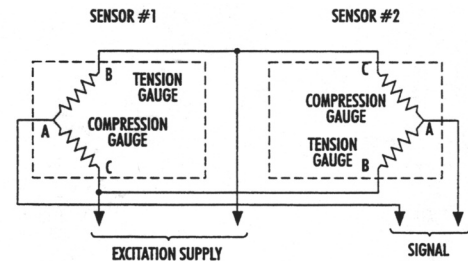

- Accurate tension measurement
–Provides consistent product quality
- Flexible mounting—For easy installation
- Interfaces with Nexen Tension Controls and Meters
–For a quality tension control system

Principle of Operation

Diagram of "Twin Beam" Sensor Gauging and Wiring

Basic Wiring Diagram to Form a Complete Bridge

Specifications

Gauge Resistance:	Each sensor contains half a bridge having a nominal resistance of 120 ohms per gauge
Excitation Voltage:	6 VDC or VAC (RMS) maximum
Output Signal at Rated Maximum Force:	250mV nominal per Tension Sensor (1/2 bridge) 500mV nominal per Tension Sensor pair (full bridge)
Operating Temperature Range:	0°F to +200°F (-18° to +93°C)
Sensitivity Change with Temperature:	Less than 0.02%/°F of rated output typical
Humidity:	95% R.H.
Combined Non-linearity and Hysteresis:	±0.5% maximum of rated output
Repeatability:	±0.2% maximum of rated output
Non-destructive Overload Rating:	150% of force
Ultimate Overload Rating:	300% of force typical
"MS" Connectors:	MS-3102A-10SL-3P (3-Pin Connector)
Cable:	16 foot (5 meters) cable included
Input Impedance Required: (Sensor Signal Amplifier if not supplied)	5K ohms per Tension Sensor (1/2 bridge) 10K ohms per pair (full bridge)
Output Impedance:	Approximately 850 ohms per Tension Sensor at 25°C (1/2 bridge) or 1700 ohms per pair (full bridge)
Weight:	3.4 lbs. (1.5 kg) each

All data subject to change without notice.

Installation

Selection of Force Rating

The proper sensor force rating for any application is calculated using known values for maximum web tension, wrap angle and idler roll weight. To calculate the force rating, first select the appropriate wrap configuration, 1, 2 or 3. Then calculate the force using the formula for that wrap configuration.

These formulas allow for a tension transient of 2 times the average tension. Thus, in some cases, it may be appropriate to use a sensor pair with a force rating slightly less than the calculated net force.

In some applications, a transducer roll can be so heavy that its weight takes up the operating range weight of the sensors. If

this happens, it may not be possible to zero the tension when the transducer roll is unloaded. This is caused by exceeding the adjustment range of the tension controller or meter.

To determine if your idler roll is too heavy, compare the force rating with the effective weight of the roll using this formula: If W COS (A) is more than 95%

of the force rating selected, the tension meter or controller cannot be adjusted to zero. If this is the case, one or more of these changes must be made to reduce W COS (A) to less than 95% of the force rating:

- Reduce the sensor roll weight
- Increase angle (A)
- Use the next higher force rating (this is not desirable as sensor signal output is reduced)

Selection of Force Rating

ELECTRO-PNEUMATIC CONVERTERS

Converts an electric current input signal into a pneumatic signal.

EN 50 & EN 40
Dimensions
page 305

EN 50 Electro-Pneumatic Converter

The EN 50 is designed to accept a low power 4-20 mA or 0-10 volt signal, and to convert this signal into a proportional pneumatic pressure.

Standard Features

- High pneumatic pressure output
- Excellent linearity and response
- Temperature compensated
- Compact size
- Simple Installation and Maintenance
- Flexible mounting options
- Field reversible for reverse output operation
- Optional volume booster available for even more flow capacity
- CE marked

Function

The electro-pneumatic converter, Model EN 50, converts a current or voltage signal into a proportional pneumatic output. The typical application is controlling a pneumatic clutch or brake from an electronic controller. Nexen tension controllers, either the open loop or closed loop types, require the EN 50 as an interface to control a pneumatic clutch or brake.

Filtering

Instrument quality air, per ISA Standards D7.3-1981, is required. Use a filter to remove dirt and liquid from the air line ahead of the transducer if necessary. If an air line lubricator is used, it must be located downstream, beyond the transducer.

Product Number	Description
912142	See page 305

Available in three output ranges

The EN 50 Electro-pneumatic transducer is available in 3 output ranges to match your requirements.

ELECTRO-PNEUMATIC CONVERTERS

Converts an electric current input signal into a pneumatic signal.

EN 40 Electro-Pneumatic Converter

The EN 40 is designed to input a DC signal in the ranges of 4-20 mA or 10-50 mA, and to convert this signal into a proportional pneumatic pressure.

Standard Features

- High pneumatic pressure output
- Excellent linearity and response
- Compact size
- Simple installation and maintenance
- External zero adjustment
- Can be mounted at angles of up to 15°
- Temperature compensated
- Volume booster incorporated
- Can be applied to manifold circuits

Function

The electro-pneumatic converter, Model EN 40, converts a current signal into a proportional pneumatic output. It also incorporates a volume booster to assure the flow rate and pneumatic pressure required by pneumatic equipment for industrial use.

Flow vs. Pressure
EN 40-1D @ 20 psi input-138 kPa

Flow vs. Pressure
EN 40-1A @ 70 psi input-483 kPa

EN 40-1B & EN 40-2B
@ 92 psi input-634 kPa

Applications

Tension Control

Model EN 40 is employed in web tension control systems using an air brake or clutch.

Rider Roll Control

Control roll hardness at the winder by means of a rider roll.

Specifications EN 40

Product No.	Model No.	Current Input	Air Output	Air Input Maximum	Air Consumption
912001	EN 40-1D	4-20 mA	0-15 psi 10-100 kPa	20 psi 138 kPa	.18 SCFM @20 psi 5 kPa
912004	EN 40-2B	10-50 mA	0-85 psi 0-595 kPa	100 psi 690 kPa	.42 SCFM @85 psi 12 kPa
912028	EN 40-1B	4-20 mA	0-85 psi 0-595 kPa	100 psi 690 kPa	.42 SCFM @85 psi 12 kPa
912035	EN 40-1A	4-20 mA	0-57 psi 0-343 kPa	70 psi 483 kPa	.32 SCFM @57 psi 9 kPa

Load Resistance 450 Linearity ± 1% Weight 4.4 lbs

Filtration

This converter must be used with an air supply filtered to 0.10 micron. We recommend Nexen filters.

Product Number	Description
912142	3 micron prefilter and .1 micron final filter

ELECTRO-PNEUMATIC CONVERTERS

Converts an electric current input signal into a pneumatic signal.

Base Mounting Dimensions

AUXILIARY PNEUMATIC CONTROLS

Single Stage Caliper Control

This simple, easy-to-use control is ideal as a manual brake control. Simply connect inlet and outlet lines and set the regulator to desired starting air pressure. Turn the regulator down as roll diameter decreases to maintain constant tension. Turn the toggle valve on or off to allow airflow to the brake calipers.

Regulation of air pressure to control brake calipers

- Wall mount
- 5-125 psi (34-862 kPa) range gauge
- 3/32" (4mm) internal flow passages
- 1500 SCFM (42,475 liter/min) flow rate at 100 psi (690 kPa)
- 300 psi (2068 kPa) maximum inlet pressure
- 180° F (82° C) maximum operating temperature
- 1/8 NPT air inlet connection (1)
- On/Off toggle valve control
- Perfect as a manual backup to an automatic tension control system

3-Stage Caliper Control

Use this control to direct regulated air pressure to three separate sets of caliper connections. Like the single caliper model, this control has an adjustable regulator, but 3 rocker valves allow you to individually control 3 set of calipers. The sets can be configured as you see fit. You control caliper sets as a single, as a pair, or as a series. This gives you up to 8 different control configurations. This flexibility means you can control lines running delicate tissue or heavy stock without worrying about variations in brake control.

- Wall mount
- 5-125 psi (34-862 kPa) range gauge
- 3/32" (2.38 mm) internal flow passages
- 1500 SCFM (42,475 liter/min) flow rate at 100 psi (690 kPa)
- 300 psi (2068 kPa) maximum inlet pressure
- 180° F (82° C) maximum operating temperature
- 5/32" (4 mm) push-insert output connections (3)
- On/Off toggle valve and 3 rocker control valves
- 8 possible configurations
- Perfect as a manual backup to an automatic tension control system

Four Stage Caliper Manifold

This manifold gives you 16 combinations of on/off caliper control. Run pressure-regulated air to the manifold and use the on/off valves to select the correct combination of calipers.

- Mounts directly to guard or wall
- 3/32" (2.38 mm) internal flow passages
- 1500 SCFM (42,475 liter/min) flow rate at 100 psi (690 kPa)
- 300 psi (2068 kPa) maximum inlet pressure
- 180° F (82° C) maximum operating temperature
- 1/8 NPT air inlet connection (1)
- 5/32" (4 mm) push-insert output connections (4)
- 4 on/off toggle valves
- 16 possible configurations (on/off only)

Typical Multi-Stage Air Line Connection

Ordering Information

Model	Product Number	Shipping Wt. Lbs.[kg]
Single Stage Caliper Control	854000	2.5 [1,1]
3-Stage Caliper Control	835120	5.7 [2,6]
Four Stage Caliper Manifold	835134	1.0 [0,45]

TCD600 DIAMETER TENSION CONTROLLER

The central component of a tension control system.

TCD 600 Open Loop Diameter Tension Controller

The TCD 600 is the central component of a tension control system that includes controllers, sensors, and a clutch, brake, or drive. The system maintains uniform web tension in an open loop control system for printing or converting web

materials including: paper, film, foil, textiles, non-wovens, metal strip and rubber. The TCD600 provides an easy-to-use operator interface in a non-contact, open loop, tension control system that provides reliable wind and unwind control.

Features and Benefits

- Three measuring systems available:
 1. Ultrasonic Sensor: direct measurement of roll diameter.
 2. Proximity Switch and Optical Encoder: calculates roll diameter.
 3. Proximity Switch only: counts up or down from initial roll diameter.
- Front panel buttons allow operator to change parameter settings of system functions.
- Illuminated two-line display allows easy set-up and continuous operational viewing.
- Automatic or manual mode control.
- Taper tension circuit included for tapered winding.
- 115/230 VAC (50/60Hz) input select switch.
- 0-10 VDC, 4-20 mA outputs for easy interface with the controlled component.
- Automatic control—minimal operator attention.
- Programmable—allows customized operating parameters for up to five jobs in non-volatile memory.
- Can be used with a broad range of web thicknesses.
- Built-in service braking—controls web spillage during deceleration.
- Start Output Control—controls web slack and provides initial tension.
- Flexible installations—Web path alteration not required.
- Sensing elements do not contact the web— helps prevent web surface damage.
- Automatic job recall after power up.
- Press single button to adjust tension set point.

Easy Calibration, Set-up and Operation

Specifications

AC Power	115 VAC/230 VAC, 0.3A/0.6A, 50/60Hz, 1 Phase
Torque Control Output	0-10 VDC @ 10mA, 4-20mA @ 650Ω max.
Diameter Output	0-5 VDC @ 10mA
Alarm Outputs	30 Volts @ 100mA (optically isolated)
Switch Inputs (Start, Stop, Hold)	14 VDC @ 1.5mA (optically isolated)
Ambient Temperature	32°F to 120°F (0°C to 50°C)
Weight	1 pound (1.6kg)

Encoder Mounting Bracket	912141
Proximity Switch	912068

TCD 600 DIAMETER TENSION CONTROLLER

The central component of a tension control system.

How the TCD 600 works.

- Maintains constant tension by varying brake or clutch torque proportional to the change in product roll diameter. The setpoint is adjusted for the maximum torque needed at full roll diameter, the TCD600 applies a correction based on its diameter calculation and proportionately increases clutch torque as a wound roll builds up or decreases brake torque as an unwind roll becomes smaller.

Applications

- The TCD 600 determines roll diameter with one of three methods:

1. An ultrasonic sensor measures the distance to the surface of the product roll. A short distance indicates a full roll and a longer measurement indicates a smaller roll.

Output to pneumatic clutches and brakes is through an electro pneumatic converter (see pages 305-307). Output to electric clutches and brakes is through an external power supply. Output to a variable speed motor is through the motor control.

Ultrasonic Sensor (912127)

Power Supply: 20-30VDC Reverse Polarity Protected
Input Current: 50mA
Operational Range: Adjustable 4" To 40" [100 TO 1000 mm]

Proximity Switch (912068)

Power Supply: 10-30VDC
Output: Open Collector
Target: Ferrous Iron
Sensing Distance: <394 in. [10 mm]
Target Size: 1-1/2 x 1-1/2 x .04 in. [40,0 x 40,0 x 1,0 mm]
Cable Length: 80 in. [2 m]

Optical Encoder (912140) Mounting Bracket (912141)

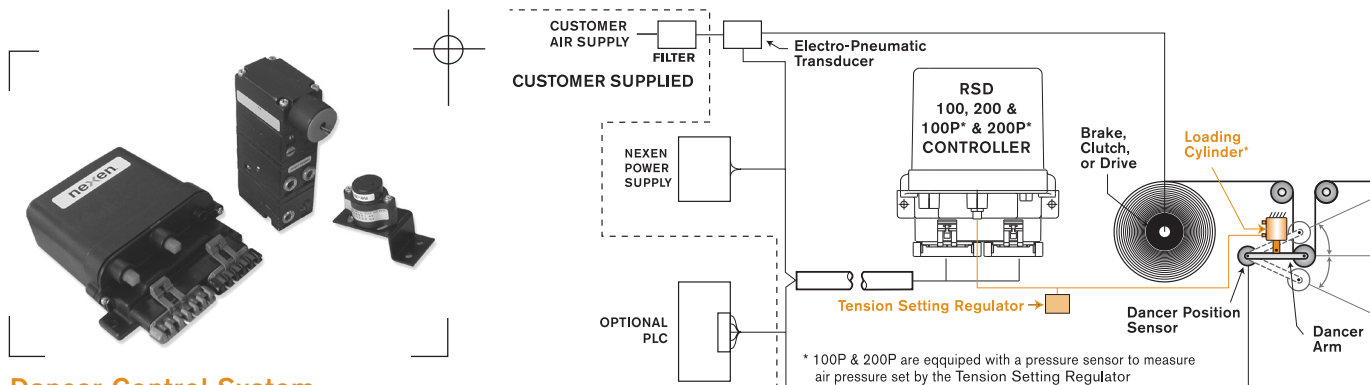

(Optical Encoder Bracket ordered separately)

Power Voltage: 5-28VDC
Current Draw: 80mA No Output Load
Output Signal: Open Collector, NPN
Frequency Response: 20KHz Maximum (12" circumference wheel provided)
Cable Length: 120 in. [3 m]

RSD DANCER CONTROL SYSTEMS

Advanced Technology for Simple Installation, Precise Control, and No Scheduled Maintenance

Dancer Control System

The dancer arm stores web material in a loop, and maintains constant downstream tension by increasing or decreasing the amount of material in the loop whenever the upstream web tension varies. The dancer arm performs best when it is kept in its mid-range position, where it is always capable of increasing or decreasing the volume of web storage, when reacting to tension changes.

RSD Common Features

All of the controllers are designed to work with the Nexen DPS30 or 60 Hall Effect Sensor to sense dancer arm travel through either 30 or 60 degrees of arm movement.

The controllers can also provide either a 4 – 20 mA or 0-10 VDC control output signal for use with clutches, brakes, or drives.

Each controller is capable of communicating via RS232 that allows commands to be sent and status/data to be received via computer or programmable logic controller.

The RSD system works to maintain constant tension and keep the dancer arm in the center of its travel range. If the dancer arm position changes, Nexen's DPS Dancer Position Sensor, senses the movement and sends a signal to the RSD controller, which provides a corrective signal to the clutch, brake, or drive to increase or decrease web storage and reposition the arm.

Each controller is packaged in a sealed enclosure, operates over a 0 - 60°C [32 - 140°F] temperature range, and is CE and ETL approved.

Communications Software

Set up and calibration of the controllers is performed with the Nexen Communications Software installed on a computer. This Software is Windows 98, and later compatible and can be downloaded from Nexen's website. The software guides you through

Nexen's closed Loop dancer control systems feature the RSD Series of Dancer Controls for consistent web tension that automatically adjusts for changes in roll size and inertia. The four controls in this series are RSD100, RSD100P, RSD200, and RSD200P. The last product in this group is a complete unwind dancer control package for use with pneumatic brakes, the RSD250.

the simple set up steps and even features a diagnostic screen to display, both graphically and digitally, the real time effects of any tuning adjustments.

Once the controller is up and running there should be no need to ever redo the set up. Set it and forget it.

All setup and tuning parameters can be saved to a file and reused to setup an identical machine in the future.

Conforms to ANSI/UL STD60950
 Certified to CAN/CSA-C.22.2 No.60950
 +24 VDC, 500 mA max

The Dancer Controller System is CE compliant when used with the following components: RSD100 or RSD100P, RSD200 or RSD200P, EN50. DPS. and Nexen's power supply.

RSD100, 100P, 200 & 200P DANCER CONTROLS

Minimizes dancer arm movement and maintains running position.

RSD100 Specific Features

The RSD100 features automatic control gain adjustment based upon roll diameter change. As the roll diameter changes, the RSD100 can modify its control gains automatically, by observing changes in the output control signal level, or more accurately by using a roll diameter sensor.

The roll diameter sensor is an ultra sonic ranging sensor that senses the distance from the sensor to the surface of the unwind or wind up roll.

The RSD100 uses a PID control algorithm, which is tuned with the Nexen Communications Kit.

RSD100P Specific Features

The RSD100P is an RSD100 equipped with a pressure sensor to sense the air pressure in the dancer arm's loading cylinder. This pressure signal provides the RSD100P with

the ability to adjust control gains automatically as the web tension is changed. This controller is recommended over the RSD100 if web tension is changed more than +/- 20%.

RSD200 Specific Features

The RSD200 features automatic gain adjustment based on changes in roll diameter and inertia. Internally, the RSD200 utilizes a non-linear adaptive algorithm that models an ideal unwind or wind torque control application.

Adjusting tuning parameters allows the RSD200 to adjust that model to fit the actual application. The end result is high performance control without the need for the additional feedback sensors common to many drive systems.

Simplicity is another feature of the RSD200. The basic system only requires a dancer arm position sensor and a machine start/stop signal to deliver high performance.

The adaptive algorithm also provides for Smart Splicing, which allows the RSD200 to accommodate different size rolls during splicing without readjusting settings.

The Super Crawl feature of the RSD200 gives it the ability to maintain stable performance with small roll diameters and slow web speeds.

RSD200P Specific Features

The RSD200P is an RSD200 equipped with a pressure sensor to sense the air pressure in the dancer arm's loading cylinder. This pressure signal provides the RSD200P with the ability to adjust control gains automatically as the web tension is changed. This controller is recommended over the RSD200 if web tension is changed more than +/- 50%.

See next page for RSD250 Unwind Dancer Package Features

RSD100, 100P & RSD200, 200P Approximate Dimensions

Features

- Control outputs of 4-20 mA and 0-10 V
- 12 VDC reference output for Dancer Arm Position Sensor
- Inertia compensation
- Accommodates Flying Splice Applications
- Operating temperature of 0°-60°C [32°- 140°F]
- PID control algorithm
- Setup parameters adjusted via computer interface - No potentiometers to adjust
- RSD control status available via RS232 communications
- Designed for mounting anywhere on a machine
- Drip proof and dust tight enclosure
- No risk of hazardous voltages with 24 VDC operation
- ETL & CE certified

RSD250 UNWIND DANCER PACKAGE

Includes all the essential components for state-of-the-art dancer arm control.

Unwind Dancer Package

Nexen's RSD250 Unwind Dancer Package includes all the essential components for state-of-the-art dancer arm control. Pre-configured for unwind applications using a pneumatic brake, this closed loop dancer control system features the RSD250 dancer position controller, which automatically adapts to changes in roll size and inertia.

The RSD250 is a modified version of the RSD200. The Communications Kit is not needed for normal operations because calibration and tuning is accomplished with two potentiometers located on the PC

board. For more demanding applications the Communications Kit can be used to configure calibration and tuning parameters for more exacting control.

Each RSD250 Package includes an RSD250 dancer controller, DPS60 dancer arm position sensor, EN50 pressure converter, air supply filter, air line tubing with fittings, and electrical cables with quick connect fittings. This complete package, ideal for paper, film, foil, textiles, rubber, and wire applications, combines high performance with easy installation.

RSD250 Preconfigured System Simplifies Setup and Installation

The RSD250 Package comes preconfigured for unwind pneumatic brake applications, with essential setup parameters set. Installers simply calibrate the dancer arm range and select the start/stopped signal used on the machine. Tuning is also simple with only two potentiometer adjustments. Once tuned and calibrated, it automatically compensates for tension disturbances.

Adaptive Gain Ensures Optimal Tension Control

The RSD250 Package features state-of-the-art technology that actually takes into account the changes in both roll diameter and inertia, compensating for these issues before tension disturbances occur. This keeps the dancer arm stable while maintaining constant web tension.

Smart Splicing Reduces Roll Waste

The RSD250 quickly adapts to new rolls without causing tension disturbances, regardless of differences in roll size or speed.

All-Inclusive Package Integrates Individual Components

The RSD250 Package is designed to take care of itself, requiring only dancer arm feedback and a machine start/stop signal to expertly adapt to any tension situation. Electrical connections between each component of the RSD250 system are prewired; pneumatic

Connections feature tool-less quick connect fittings, so making connections is fast and easy with little chance of error.

Additional Features/Benefits

- Simple setup and use
- Adaptive gain control
- Drive-like performance without the cost
- Inertia and diameter based gain compensation
- Super crawl: handles very small rolls and low speeds
- Minimal sensor feedback needed
 - Automatically compensates for roll-diameter changes, egg-shaped rolls, and other tension disturbances
 - Low integration and startup costs
- Only two potentiometer adjustments for tuning
- Connectors provided on external components
- All-in-one filter included

EN50 Electro-Pneumatic Transducer

EN50 Specifications See page 305

RSD100, 100P, 200, 200P & RSD250 Product Compatibility

COMPONENT	SYSTEM TYPE				
	RSD100	RSD100P	RSD200	RSD200P	RSD250
Dancer Position Sensor	N	N	N	N	I
Roll Diameter Sensor	O	O	NN	NN	NN
EN50 Transducer	O	O	O	O	I
Air Filter	O	O	O	O	I
Air Loaded Dancer Arm	NN	N	NN	N	NN
Power Supply	O	O	O	O	I
Communications Kit	N	N	N	N	O

Explanation:

N = Needed Component, NN = Not Needed, I = Included, O = Optional Component; the EN50 and the Filter needed to clean it's air supply are only needed when the RSD system is to be used to control a pneumatic device. The Power supply is only needed when there is not a 24VDC supply available on the machine. The Ultrasonic roll Diameter Sensor is needed for more accurate diameter feedback on the RSD100 and RSD100P controllers.

DPS30A AND DPS60A DANCER POSITION SENSOR

Nexen's dancer position sensors are designed to accurately measure the rotational movement of a dancer arm. This family of sensors uses Hall Effect technology for infinite resolution, low drag, and no mechanical wear. The DPS30A and DPS60A offer non-contact operation without the use of potentiometers or gearing. This means smooth operation (low drag), no maintenance, and high accuracy. Its small size makes the DPS easy to install and incorporate into existing systems.

TA 100/TA 110 TENSION AMPLIFIERS

Superior signal conditioning for web tension sensors.

TA 100/TA 100A and TA 110/TA 110A Tension Amplifiers

These Tension Amplifiers both interface with LVDT tension sensor or strain gauge sensors to measure tension in a continuous web strip or strand of material during converting or printing. The material can be paper, film, foil, rubber, wire, metal strip, non-wovens or textiles used in continuous process.

These amplifiers are ideal when you need low cost, accurate tension measurement of a web process interfaced with machine controls. Applications include input for data loggers, process controllers. Host computers or other applications that require a precise tension interface.

Precision input from either LVDT or strain gauge sensors.

Use either the TA 100 or TA 110 amplifier with any Nexen MB or SW sensors.

They provide an excitation signal to the sensors and then separately amplify the return signals from each sensor. The signals from both sensors are then added to provide the 0-10 VDC or 4-20mA proportional tension output.

Choose chassis-mount model for concealed OEM installations.

The chassis-mount style of the TA 110 makes it ideal for installations in cabinets or enclosures.

Choose fully enclosed model for easy retrofit.

The TA 100 comes complete with a NEMA-12 enclosure, making is a good choice when adding on to an existing tension control drive or other retrofit installation.

Features and benefits

- Low cost signal conditioning for LVDT or strain gauge tension sensors—easy to cost justify
- Wide tension range—flexible installation
- Chassis or enclosed versions—for easy, flexible installation
- Ideal for use with PLC's motor controllers or data logging systems where local readout is not required—saves cost
- Both 0-10 VDC and 4-20 mA outputs—easy to interface
- NEMA-12 enclosure (TA 100 & TA 100A)
- Pre-wired 8 ft. [2.4 m] Power cord included with TA100
- UL and UL_C Listed, Enclosed models only

SIGNAL CONDITIONER – SC100

Use with indicators, PLCs, PCs, or web controls

Signal Conditioner–SC100

Nexen's SC100 signal conditioner provides excitation and signal processing to amplify low voltage sensor signals. Signals are amplified to industry standard voltage/current levels and outputs are suitable for use with indicators, PLCs, PCs, and web controls.

The SC line offers two sensor channels and supports two different sensor families: differential signal sensors and single-ended signal sensors. Differential sensors such as strain gauge load cells are used to measure force or tension. Single-ended sensors such as LVDT load cells and web guide sensors are used to measure force, tension or we edge position. Operators can optimize signal conditioner outputs using either the summation of both sensor channels or each channel individually.

Specifications

Model	SC100
Product Number	964420
Power Supply	+24 VDC at 500mA
Isolated Power Supply (Optional)	+24 VDC at 500mA
Analog Inputs	Individual: 0-1 V Max Summed: 0-500 mV Max

TM 210 TENSION METER

TM 210 Tension Meter

The Nexen TM 210 Tension Meter is ideal for precise, accurate measurement, with digital readout of a tension within a web.

The digital readout can be field adjusted for a maximum reading anywhere from 9 to 1999 pounds or kilograms. The readout is displayed as a four digit number with a decimal point for all ranges up to 100 lb/Kg. Beyond the 100 lb/Kg range, the decimal is deleted as irrelevant.

The TM 210 also provides a 0 - 10VDC analog output signal that is proportional across the full scale tension range. Choose a filtered or unfiltered output signal.

The TM 210 is useful as a tension readout-only device to measure mid-process tension. Its 0 to 10VDC analog output is ideal as a proportional tension data signal to process controllers, data loggers and sophisticated variable speed motor controls.

Features

- Use one or two LVDT type Tension Sensors
- Digital readout
- Panel mount
- Selectable readout of Sensor #1, Sensor #2 or total web tension
- 0 to 10VDC filtered or unfiltered control output, proportional from zero to full scale
- Calibrate digital scale to read out maximum reading anywhere in the 9-1999 range
- Front panel access to calibration controls

How the system works

Use the TM 210 with a pair of MB Tension Sensors to precisely measure web tensions. Use one of the sensors for narrow webs, single strands of wire, or any other narrow material where tension will not vary from one side to another.

The TM 210 provides an excitation signal to the MB Tension Sensors and separately

amplifies the return signals from each sensor. The signals from both sensors are then added to provide the 0 to 10VDC control output.

Use the selector switch on the front panel to display the tension measurement from either sensor or the sum of both sensors.

Specifications

Product Number	912675
Digital Display	0000 to 1999 (pounds or kilograms)
Decimal Point	Used in ranges up to 100 (lb/Kg). Not used in higher ranges
Analog Output	0-10 VDC (5mA) proportional from 0 to full scale tension
Ambient Temperatures	32 to 122°F (0 to 50°C)
Power Supply	100, 110, 200, 220 VAC, 50/60 Hz
Weight	3.5 lb (1.6 Kg)

220 VAC	912727	GC 300 with Second Sensor Board
220 VAC	912747	GC 300 with Remote Operator Board
220 VAC	912749	GC 300 with Second Sensor Board and Remote Operator Board
	912696	Automatic Centering Proximity Sensor
	912736	Second Sensor Board

Three easy to use Operating Modes for flexibility.

Nexen's straight forward touch pad controls simplify adjustments and changes in operating mode.

Automatic

Actuator is constantly driven to reduce web position error to zero. Following setup and calibration this mode automatically keeps the web positioned correctly.

Manual

This mode allows you to steer the guide mechanism left or right during setup or when manual override is necessary.

Auto-centering

Using either reed switches or proximity sensors, this mode automatically centers the roll stand or guide roll assembly for machine setup, calibration or as a system "standby."

The GC 300 Web Guide Controller uses sophisticated electronics to correctly position moveable roll stands or guide roll assemblies used in printing and converting operations. The GC 300 provides accuracy to within ± 0.004 inches (0,01mm) of edge or centerline positions.

The GC 300 receives signals from web position sensors and translates them into control signals for web position drive motors. The system maintains constant position of paper, film, foil, textiles, non-woven materials, metal strip, rubber or any product processed in a continuous strip.

The GC 300 can take signals from either pulsed LED sensors

for opaque edge monitoring, or ultrasonic sensors for monitoring opaque and transparent materials. A special sensor is also available for following printed lines or pattern edges on previously printed webs. This is the Line Follower Sensor.

A single sensor can be used for Edge Position Control (EPC). With an optional daughter board and a second sensor, the GC 300 can provide Center Position Control (CPC). The sensor should be mounted with it's measuring center aligned with the desired position of the web edge.

CPC requires two sensors placed opposite one another on either side of the web. This configuration assures that the

center of material being processed stays aligned with the center of the machine.

Standard Features

- Smart Current Limiting protects motors.
- Automatic Calibration simplifies setup.
- Universal Symbology for international applications.
- Use either Proximity or Reed auto-center sensors for flexible installation and easy set-up.
- Internal thermal protection prevents overheating.

GC 300 WEB GUIDE CONTROLLERS

Easy Calibration, Set-up and Operation

Maximum Output:
24VDC at 6 amps max.

Smart over-current protection and indication. Protects motors while allowing full force operation when needed.

Thermal overload protection of driver stages. Motor miswiring warning. Determines and displays motor wiring errors.

Right and left travel limit protection and indication. (Both visual and relay closure).

Sensor type selection.
Dip-switch selection of ultrasonic, LED, or Line Follower type sensor.

Automatic sensor calibration.
Sets optimal offset, gain and deadband.

Manual sensor calibration to override the automatic settings when needed.

Programmable sensor offset (with fault indication).

Remote sensor offset.
A remote pot. can be used to electronically offset the center of the guide sensor.

Instrumentation output available.

Center guiding available.
(Use daughter board accessory for second sensor). Automatically enabled when daughter board is present.

Auto-center function included standard.
Operates with either reed switch or proximity sensor input.

Front panel membrane switches.
Allows all calibration to be accomplished from the front panel.

Front panel LED bar graph for rapid interpretation of status.
Used to display web position within the sensor window; and also display faults and parameters during calibration.

Factory settings stored in memory.
Return the unit to "factory parameter status" quickly and easily.

Sealed for use in dusty environments.

Dimensions

Specifications

Accuracy	± 0.004" [0,1mm] with Appropriate sensors
Power	110 VAC or 220 VAC, 160 VA at 50/60 Hz
Ambient Temp. Range	32° F. to 120° F. (0° C. to 50° C.)
Inputs	Standard Line Follower LH100 (Requires second sensor board)
	Standard One Ultrasonic UH21 or One Infrared LED PH16
	Optional Second UH21 or PH16 (requires daughter board)
Auto-center Switch	Either Limit Switch or Proximity Switch (Auto-Detect)
End-of-Travel	Limit Switches
Remote Offset Pot	2kΩ Pot. (customer supplied)
Outputs	
Motor	6 amp Max, 24 VDC, Over Current protected
End-of-Travel	SPDT Relays, Rated 0.3 amp max. @ 24 VDC
Web Position	Indication: 0-10 V

AE 120 WEB GUIDE CONTROLLER

The brains of the Nexen Web Guiding Systems

Amplifier for Automatic Web Positioning

Web position information from the sensor is fed to a web guide controller or amplifier.

The amplifier contains a SCR motor control which will drive an electrical linear actuator to correct the web position through the moveable roll stand or the guide roll mechanism.

The primary purpose of the amplifier is automatic positioning of the web in the sensor.

Amplifier Auxiliary Functions

Automatic Centering to move the roll stand or guide roll to its

midpoint or neutral position during rewinding.

Over Travel Alarm to indicate when the linear actuator has reached its maximum travel limit without being able to position the web.

Remote Position Readout to give a visual indication of web position at a remote location or as data input to a PC or PLC.

Amplifier Special Control Requirements

Special Auxiliary controls include:

A Remote Fine Tuning control to allow minute adjustment the of web position without having

AE 120 Web Guide Controller Product Number 912674

Precise edge or center positioning control for all opaque web guiding applications.

The AE 120 Web Guide Controller is an electronic controller that correctly positions moveable roll stands or guide roll assemblies used in web printing or web converting operations. It is the controller for Nexen's Self-Contained Web Guides and can also be used as a stand-alone controller in edge or center positioning control applications.

Compact and fully featured.

It's only 7.5 inches (191mm) wide by 2.25 inches (57mm) high, by 10 inches (254mm) deep, yet the AE 120 totally controls edge and center web positions within 0.004 inches (0,01mm).

You choose the operating mode and input signals that best suit your application.

It's part of the Self-Contained Web Guide package.

The AE 120 is the controller for Nexen's Self-Contained Web Guides. It uses a proximity sensor signal to automatically center your guide roll assembly or moveable roll stand.

It's also a stand-alone web guide controller.

The Controller also accepts several types of input signals and can send signals to various actuating devices. This makes it a compact and flexible addition to any edge or center positioning web guide system.

Controls edge positions within 0.004 inches (0,01mm).

Nexen's opaque or ultrasonic sensor provides the edge position signals to the AE 120.

Mount a single sensor on one side of the web with its measuring center aligned with the desired web edge position. This maintains the edge of the web at the measuring center of the sensor.

to physically move the sensor.

A Remote Operators Station to allow remote switching of the automatic and manual functions of the amplifier during initial tuning and running.

A Remote Position Locking

Control to lock the linear actuator at any position in its travel.

Controls centerline positions within 0.004 inches (0,01mm).

Mount two sensors equally spaced from the centerline of the machine. This maintains alignment of the web to the center of the machine.

Accepts input signals from 5 sources.

Nexen's AE 120 accepts signals from 5 external sources. This eliminates duplicating electronics if you need different input signals. One of the primary signal sources is required for operation. Auxiliary signal sources are optional.

Primary signal sources include:

- Opaque or ultrasonic sensor

Auxiliary signal sources include:

- Centering sensor (proximity sensor)
- Customer-supplied 10K ohm remote fine adjustment pot
- Customer-supplied lock-out switch to momentarily disable the auto correction mode
- Customer-supplied travel limit switches

Operates in three different modes for easy, flexible operation.

Simply flip a switch to choose one of these three operating modes:

Automatic – constantly drives an actuator to reduce error to zero. This keeps your web position left, right or centered, depending on configuration of edge guide sensors. Use this mode for normal running conditions following set-up and calibration.

Manual – allows you to manually steer the mechanism to the right or left. Disregards automatic settings. Use this mode for complete manual override.

Auto-Centering

– automatically centers the web using a proximity sensor. Locks down the equipment for safe control. Use this mode for machine set-up, calibration or as a system "stand-by."

AE 120 WEB GUIDE CONTROLLER

AE 120 Web Guide Controller

- Operates as a stand alone unit, or included as an on-board controller for Nexen Self-Contained Web Guides
- Easy to install and calibrate
- Accepts opaque edge or ultrasonic sensor input
- Remote control option
- Lock-out switch provision
- Strain-relief clamps -eliminates disconnects.

Specifications

Model	AE 120 Web Guide Controller
Product Number	912674
Power Supply Voltage	100 to 240 VAC (continuous input), 50/60 Hz
Power Consumption	100 VA
External Input	Standard Line Follower LH100
	Standard One or Two Ultrasonic UH21 or Infrared LED PH16 Position Sensor
	Centering Sensor: Proximity Sensor
	Fine Adjuster: Optional
	Lock-out Switch: N.O. 250mA, 15 DC, 1 mA (Customer supplied)
	Limit Switches: N.C. (Customer supplied)
Output	DC Motor: 24 V DC, 1.3 A
	Lamp Power Supply: 12 V DC, 1.8 W
	End of Travel: Dry Contact, Rated 0.1 A, 250 V AC, 0.1 A, 24 V DC
Ambient Temperature	32 to 122° F. (0 to 50° C)

WEB GUIDING SENSORS

Nexen Web Guiding Products: Precise Yet Rugged

Nexen Web Guiding systems give you both; extreme precision, and rugged dependability.

Precise enough for the laboratory, tough enough for the mill,

Nexen Web Guiding Systems are backed by a recognized leader in guiding equipment for over three decades.

You can be sure of quality, durability and performance... with Nexen

Three types of sensors

Several types of sensors are used to detect a web's position. The type required for any web guiding system is determined by the method required (EPC, CPC, or LFC) and type of material to be sensed.

Infrared Sensor

This type of sensor is the electrical equivalent of the pneumatic sensor. Light is transmitted by a lamp across the web edge. It is received by a light sensitive sensor. Web edge position is directly related to the amount of light sensed at the

receiving element. A variation of this method uses a pulsed LED in the infrared range as a light source. This type of sensor is not affected by ambient light, and is useful for processing photosensitive materials.

Line Following Sensor

LFC is achieved by bouncing light off a web as it passes around a transport roll in the machine. This type of sensor contains the lamp and sensor element in the same housing.

Ultra Sonic Sensors

Ultra Sonic Sensors can be used to sense photo sensitive products (photo film, print paper, etc.) or for transparent films with coating or printing near the edge.

Sensor Utilization Chart

MODEL	PRODUCT NUMBER	EPC	CPC	LFC	COMMENTS
PH 16	912085	X	X		Opaque edges only. Pulsed LED
PH 21	912626	X	X		Miniature version of PH 16, Opaque edges only. Pulsed LED
LH 100	912119	X		X	Line follower and web or pattern edges
UH 01 *	912153	X	X		Opaque or transparent edges, Ultra Sonic
AWL 280	912662	X	X		Use with AS 10 Preamplifier to sense various web widths without repositioning
AS 10	912721	X	X		Preamplifier used with AWL 280

* Cable Only, 16' #30710

Dimensions

Sensor Mounting Bracket

Product Number 3792

Universal Mounting Bracket for use on all Nexen Web Sensors. One is included free with each sensor. Brackets can also be purchased separately.

WEB GUIDING SENSORS

The Eyes of the Web Guiding System

Dimensions

PH 16 Opaque edge sensor
Product Number 912085

For sensing opaque web edges. It uses an infrared pulsed LED light source, to eliminate problems caused by ambient light. Because of its wave length (950nm) it is also usable with photo sensitive film or paper.

PH 16 is provided with a mounting bracket featuring a micro adjustment screw for fine adjustment.

Specifications

- Space between emitter and receiver 1.18 in. (30 mm)
- Measuring width ± .20 in. (± 5,08 mm)
- Cable length 16 ft. (5m)
- Light source Pulsed light emitting diode (LED)
- Light source wavelength 950 nm (Near infrared)
- Weight 2.5 lb. (1,1 kg)
- Body material Diecast aluminum alloy
- Excitation 12 VDC@ 40mA
- Output Voltage 0-350 mV
- Sensitivity 0.004 in. (0,1 mm)
- Temperature Range 32-122° F (0-50° C)

Dimensions

PH 21 Opaque edge sensor
Product Number 912626

The PH 21 is a photo electric edge sensor for webs. One PH 21 can be used for sensing either side of the web for Edge Position Control or EPC™. Two PH 21's one on each side of the web, can be used for Center Position Control or CPC™. The PH 21 senses edge position with a pulsed light emitting diode (LED), in the infrared range. This light source is not affected by ambient light.

The PH 21 is a miniaturized version of the PH 16. It is primarily used to position a sensor in a dimensionally restricted area.

PH 21 is provided with a mounting bracket featuring a micro adjustment screw for fine adjustment.

Specifications

- Measuring range ± .20 in. (± 5,08 mm)
- Cable length 16 ft. (5m)
- Light source Pulsed light emitting diode (LED)
- Light source wavelength 950 nm (Near infrared)
- Weight 1.3 lb. (0,6 Kg)
- Body material Diecast aluminum alloy
- Excitation 12 VDC @ 40 mA
- Output Voltage 0-350 mV
- Sensitivity 0.004 in. (0,1 mm)
- Temperature Range 32-122° F (0-50° C)

WEB GUIDING SENSORS

The Eyes of the Web Guiding System

Specifications

Detection line width	0.008" [0,2 mm] or greater (may differ depending on color or gradation of the line.)
Field of View	0.1"/0.2"/0.4" [2,5/5/10 mm] diameter (selectable)
Resolution	0.0005" [14µm]
Light receiving element	CCD linear image sensor.
Light source.	High luminance LED (2 colors; blue and red)
Power supply	+15V DC, 300 mA, -15V DC, 50 mA
Output	Position Signal
	Actuator/Lock Signal
Mass	LH100: 1.3 Lb. [0,6 kg] (Including cable). Mounting Bracket: 1 Lb. [0,5kg]
Attached cable length.	16 Ft. [5m]
Ambient temperature	32° to 122°F [0° to 50° C]

LH 100 Line Follower Sensor Product Number 912119

This sensor reflects light off a web and receives it back in the same sensor housing as the light emitter. The light source is an array of red and blue LED's. Superior optics allow following very low contrast guide lines as well as pattern edges. The LH 100 has a self focusing feature to simplify calibration. It can be used for sensing printed lines, pattern edges (either left or right) and for edge sensing either transparent or opaque webs.

LH 100 is provided with a mounting bracket featuring a micro adjustment screw for fine adjustment.

Dimensions

UH 01 Ultra Sonic Sensor Product Number 912153

The UH 01 senses opaque or transparent edges, even if the transparent film has coating or printing which on occasion reaches the edge of the film. Because the sensing medium is ultra-sonic, the UH 01 is ideally suited for use with any photo sensitive material.

UH 01 is provided with a mounting bracket featuring a micro adjustment screw for fine adjustment.

Specifications

Center frequency	220 KHz
Sensor gap	1.89 in. (48 mm)
Measuring width	.031 in. (8 mm)
Sensitivity	0.004 in. (0,1 mm)
Power Supply	+15 VDC/100mA -15 VDC/50mA
Output	Open, 300 mVDC (Lo) Open, 5 VDC (Hi) Blocked, 0 mVDC (Lo & Hi)
Weight	1 lb. (0,45 Kg)
Ambient temperature	32° F-120° F (0° C-50° C)
Cable length	16 ft. (5m)

CENTER PIVOT WEB GUIDES

Controlled alignment for reduced scrap, increased line speeds and improved roll quality.

Center Pivot Web Guides Web guiding without side-to-side distortion or wrinkling.

Center Pivot Web Guides won't cause wrinkling because they don't create the side-to-side tension variations that end pivot guides do. Also, unlike end pivot guides, they can operate when mounted in any position.

Center pivot guiding is the kindest to your webs. Its configuration generally requires smaller lead-in and lead-out distances than end pivot guiding. Proper correction takes fewer degrees of roll movement. Less web movement means less stress on the web and a shorter lead-out distance is needed to stabilize tension. This makes the whole guiding system more compact and reduces "hunting" and over-correcting that requires slower web speeds and increases waste.

Applications

- Mid-process
- Web converting
- Web printing
- Web slitting
- Web coating

Choose from 3 styles

The Self-Contained Center Pivot Web Guide models have a Nexen linear actuator, automatic centering sensor, controller and web guide sensor built right into the guide roll mechanism. You simply mount it and provide 100-240 VAC power.

The Small Free Standing Web Guides have an actuator and automatic centering sensor built into the guide roll mechanism. These models come in standard roll lengths of 9" (229mm), 12" (305mm) and 15" (381mm), and require a 16 foot (5M) interface cable.

The Large Free Standing Web Guides also have a built-in actuator, an automatic centering

sensor and include a 16 foot (5M) interface cable. They come in standard roll lengths of 18" (457mm), 21" (533mm), 24" (610mm), 28" (711mm) and 32" (813mm). The Free Standing models let you choose from a wide range of sensors and controllers to best suit your application.

Features and Benefits

- Self-contained guides are a complete package and completely pre-wired. Simply mount and supply 100-240 VAC.
- Web correction without wrinkles. These guides make the proper corrections to keep your web at highest speeds with the least amount of stress.
- Optional roll finishes accommodate materials with differing coefficients of friction, such as polished films and rubber sheets.
- Completely U.S.A. made.
- Ideal for tight installations because they operate when mounted in any position.
- Complete technical support and field service available.
- A complete line of sensors, tension control systems and tension control clutches and brakes from Nexen let you match components and systems that best meet your needs.

How Nexen gives you worry-free, wrinkle-free web guiding.

Nexen Center Pivot Web Guides let you run your web with minimal waste and set-up because you make corrections on-the-fly at high speeds.

Corrections are made without side-to-side tension distortions that cause wrinkles. This also minimizes web stress that can cause web breaks.

Operation and installation are simple. The web guides can operate when mounted in any position (Figure 1). Entry guide rolls and exit guide rolls are part of the web guide mechanism.

Lead-in and lead-out rolls are customer supplied (Figure 2). Calculate lead-in and lead-out distances and mount the web guide. Lead-in and lead-out distances should be at least as long as the web width. Preferably, these distances are 1.25 times the web width.

On the Free Standing Web Guides, mount the sensor between the exit guide roll and the lead-out guide roll (Figure 2). The sensor is already properly mounted in the Self-Contained Web Guides.

The web always enters the unit on the pivot side and exits on the sensor side.

Large Free Standing Center Pivot Web Guide

Guide Roll

Turned and ground aluminum. Available in 5 roll lengths. Optional finishes available.

SMALL CENTER PIVOT WEB GUIDES

Controlled alignment for reduced scrap, increased line speeds and improved roll quality.

9"(229mm) & 12"(305mm) Web Guides

Nexen Center Pivot Web Guides are engineered to provide excellent web positioning at mid-process locations, eliminate wrinkling, allow maximum flexibility in component location, and enhance ease-of-operation.

Selecting a Web Guide is Easy

- Determine the roller face length you require. Typically, this is 2" (100 mm) greater than the width of your web. These guides have roll faces from 9" to 12". (229 mm to 305 mm) Consult your Nexen representative for other sizes.
- Select a controller. Available options currently available are:
 - AE 120 Self-contained for compact mounting of the controller integral with the guide.
 - AE 120 Separate—The same controller, but mounted remotely. (Order controller separately.)
 - GC 300—Full function controller to handle international power requirements and/or unusual sensor requirements. (Order GC 300 separately.)
- Select Controller mounting (applicable to AE 120 self-contained only). Choices are:
 - Controller mounted on the left or right side, referenced to the direction of web travel.
 - Controller mounted normally, or inverted. In an inverted mounting position, the rollers are below the base. (See dimensional drawing).
- For free-standing applications (where the controller is ordered and mounted separately from the guide) select the necessary cable length. Available lengths are 16' (4,88M) and 35' (10,67M). No cable is required for self-contained units. They come totally pre-wired.
- Select a sensor:
 - None—If you want to mount the sensor remotely from the guide. (Order your sensors separately.)
 - PH 16—LED-based sensor for paper and similar opaque material.
 - UH 21— Ultrasonic sensor for transparent material and paper.
- For configurations that include sensor (i.e. either the PH 16 or the UH 21 in Step 5), select the sensor mounting.

Available choices are:

 - Left—to have the sensor mounted on the left side (looking in the direction of the web travel).
 - Right—to have the sensor mounted on the right side.
 - Both—to have two sensors mounted one each side for center guiding applications.

Product Selection Guide and Ordering Information

Determining the product number for your configuration

Example: WG-9-A-LN-NA-U-R

Roller Size	Controller	Control Mounting	Cable Length	Sensor	Sensor Mounting
9"	A = AE 120 Self-Contained	LN = Left Normal	NA = None	N = None	N = None
12"	E = AE 120 Separate	RN = Right Normal	16 = 16 feet long	P = PH 16 LED	L = Left
	F = GC 300 Mounted Separate	LI = Left Inverted	35 = 35 feet long	U = UH 31 Ultrasonic	R = Right
		RI = Right Inverted			B = Both
		NA = Not Applicable			

Please use the Web Guide Product List on the next page to specify any configuration not listed here.

SMALL CENTER PIVOT WEB GUIDES

Controlled alignment for reduced scrap, increased line speeds and improved roll quality.

WEB TENSION: 5 LBS/IN MAX

ACTUATOR SPECIFICATIONS:
GEAR RATIO: 15:1
VOLTAGE: 24V DC

* Protected against the ingress of dust and dripping water

Linear Actuators

Nexen's Linear Actuators provide the thrust that is required to move an unwind stand, a wind up roll stand or to convert an existing hydraulically actuated web guiding mechanism to electrical actuation.

Nexen's Linear Actuators are available in several models with different strokes.

To ensure optimum response and accuracy, roll stands should be mounted on linear ball bearings. Sliding ways and wheel track systems have higher coefficients of friction which requires greater break away thrust. Greater break away thrust prevents accurate, minute corrections.

CAUTION—Do NOT use the Linear Actuator for Radial (side) loads. The Linear Actuator is designed for axial (thrust) loads ONLY.

MAINTENANCE
Apply a few drops of light machine oil to the actuating rod. The frequency in which the Linear Actuator will require lubrication depends upon the working environment.

Features:

- 24 VDC permanent magnet motor
- Built-in, end limit switches
- Strong plastic housing protects motor and gear.
- Scratch-and wear-resistant powder painted outer tube
- Elegant and compact design with small overall dimensions
- 2000 mm (78.74") straight cable with DIN plug
- Protection class: IP51
- Ambient temperature: +41°F [5.0°C] to +104°F [40.0°C]
- Black in color
- Steel piston rod eye
- Zinc alloy back fixture
- CE marked

Limit Switch Adjustments

Linear Actuator Product Numbers 912730, 912731, 912732

These actuators have adjustable internal limit switches. If there is a physical obstruction or stop, then the Limit Switches can and must be adjusted to interrupt the Linear Actuator's movement before contact is made with the physical obstruction or stop.

If there is no physical obstruction to travel, then the Limit Switches may be left in their factory set default positions.

Linear Actuator Product Numbers 912733, 912734

These actuators have nonadjustable internal limit switches that are factory pre-set for the maximum stroke length. For applications that require less than the maximum stroke, an external limit switch connected to the web guide controller, must be installed.

If there is a physical obstruction or stop that prohibits the use of the maximum stroke length, then an external limit switch MUST be installed to interrupt the Linear Actuator's movement before contact is made with the physical obstruction or stop.

Failure to use an external limit switch will damage both the Linear Actuator and the web guiding mechanism.

If there is no physical obstruction to travel, then the nonadjustable, internal limit switches may be used in their default position for maximum stroke length.

Failure to use and adjust Internal or External Limit Switches properly, can damage both the Linear Actuator and the Web Guiding Mechanism.

LINEAR ACTUATORS

Accurate, positioning of roll stands for web guiding applications

Linear Actuator Dimensions

Product Number	Description	Stroke	Dimension "X"
912730	Linear Actuator 600	4 [102]	14.68 [372,9]
912731	Linear Actuator 600	6 [152]	16.68 [423,7]

TA 100B/TA 110B TRANSDUCER AMPLIFIERS

Superior signal conditioning for web position sensors.

TA 100B and TA 110B Transducer Amplifiers

Designed to interface with one PH 16 or UH 21 Web Guide Sensor to provide a 0-10 VDC or 4-20mA indication of the position of the web edge.

Used where a position feedback signal is needed to close a control loop; or where position indication only is required, without control.

These amplifiers are ideal when you need low cost, accurate web position indication interfaced with machine controls. Applications include input for data loggers, process controllers. Host computers or other applications that require a precise tension interface.

Choose chassis-mount model for concealed OEM installations.

The chassis-mount style of the TA 110B makes it ideal for installations in cabinets or enclosures.

Choose fully enclosed model for easy retrofit.

The TA 100B comes complete with a NEMA-12 enclosure, making it a good choice when adding on to an existing tension control drive or other retrofit installation.

Specifications

Model	TA 100B - 110 VAC, Enclosed	Product Number	964414
Model	TA 110B - 110 VAC, Chassis	Product Number	964415
Input power	110 VAC, 50/60 Hz, 1 Phase; Prewired 8 ft. [2.4 m] power cord for TA 100B		
UL and ULC Listed	Enclosed model only		
Sensor compatibility	Any Nexen PH 16 or UH 21 Web Position Sensor		
Outputs	0-10 VDC, 4-20 mA		
Operating temperature	50°F to 120°F (10°C to 50°C)		
Operating humidity	10% to 90% relative non-condensing		
Storage temperature	-30°F to 150°F (-35°C to 65°C)		
Storage humidity	10% to 90% relative non-condensing

AUXILIARY EQUIPMENT	
Safety Chuck	336-337
Paper Checker PC 210	338
Splice Detector System	339

WEB AUXILLARY CONTROLS

Web Products

Safety Chuck

Nexen's line of rugged safety chucks provide roll shaft support and torque transmission at a low cost. The maintenance-free design ensures optimal performance throughout the life of each safety chuck. Nexen's units safe-guard your equipment by securing the roll shaft in place during any wind or unwind operation. Our safety chucks will only open with the socket in the upright position.

Available for either foot or flange mounting, these safety chucks complement Nexen's dependable line of tension control brakes, clutches and electronic tension control systems, offering you a complete package with seamless installation and operation.

Features and benefits

- Redundant safety mechanisms securely lock shaft in place
- Long, maintenance-free life
 - Durable construction
 - Cast iron housing
 - Chrome plated, steel hand wheel
 - Shaft socket hardened to Rockwell 56C
- Available in ready-to-assemble brake packages
- Manual unlock for most models
- Free turning precision ball bearings
- Finger guards on all models
- Shaft extensions with keyway
- Foot or flange mounting
- Metric size sockets available upon request

Redundant safety mechanism locks the handwheel closed during rotation.

Nexen's easy to use safety chucks increase productivity by allowing for quick roll changes. Simply push the handwheel open to insert or remove a roll, then push closed to secure the roll in place.

These quick couplings are an essential part of any web operation, adding ease and safety to your process with minimal cost and no maintenance required.

BRAKE OPTIONS

Nexen is committed providing easy-to-use mounting options to integrate our advanced brakes into your system. We offer brake adaptor plates that match each model to ensure superior design and seamless operation.

PRODUCT NUMBERS AND DIMENSIONS

For product numbers and dimensions refer to Nexen's web site at www.nexengroup.com

PAPER CHECKER – PC 210

Detects web breaks, splices and double sheet feeding.

Paper Checker – PC 210

The Paper Checker System detects web breaks and splices on web-fed machinery. It also detects double sheet feeding on sheet-fed machines.

When the system senses a splice, break or double sheet feed, an alarm indicator lights and a relay changes state (normally open or normally closed).

Main Applications

Web splice and break detection on rotary presses, slitters, laminators, coaters, winders and other machines running a web.

Double feed detection on sheet-fed presses, bag machines and laminators.

Features

- Non-contact sensing
- Wide range of web (sheet) thicknesses
- Senses all materials including paper, cellophane and poly laminates
- Ultrasonic sensing eliminates false triggering caused by printed characters or patterns
- Simultaneous detection of web splice and web break
- Color and material of splicing tape, and use of a butt splice or overlap splice do not affect splice detection
- Synchronous signal can be used to eliminate false triggering caused by web sag during web stop
- Self calibrating to new web thickness

How the System Works

The Paper Checker System has two parts—the PC 210 Paper Checker Control and the UH 200 or UH 215 Ultra-sonic Sensor, composed of a transmitter and receiver element.

The PC 210 provides an excitation signal to the transmitter and reads the return signal from the receiver. The PC 210 indicates machine-feed conditions through the front panel LEDs and contact closures. There are two sets of contacts: one for web splice or double feed and one for web break.

The ultrasonic signal enables the sensor to “see through” clear and opaque film, papers and laminates without false triggering that patterns or printing can cause when other types of sensors are used. It also recalibrates to a new web thickness when product is changed.

Specifications

Model	Product Number	Web Splice Detection	Web Break Detection	Two-Sheet Feed Detection	Sensor Specification	Specifications
PC 210 with UH 200	913071	<p>Web Thickness 0.0004 to 0.031 in. (1µm to 0,8mm)</p> <p>Splice Width 0.787 in or more (20mm or more)</p> <p>Line Speed 3300 ft./min. (1000 m/min. or less)</p>	<p>Web Thickness 0.0019 to 0.031 in. (50µm to 0,8mm)</p> <p>Line Speed 3300 ft./min. (1000 m/min. or less)</p>	<p>Sheet Thickness 0.0019 to 0.031 in. (50µm to 0,8mm)</p>	UH 200 40kHz frequency	<p>Power Supply 100 to 240 VAC, 50/60 Hz</p> <p>Power Consumption 10 VA</p> <p>Output Contacts, Web Break and Web Splice/Double Feed</p> <p>Rating: 240 VAC, 01 A 24 VDC, 0.1 A</p> <p>Reset Time, Web Splice Double Sheet Contact 0.2 - 6 seconds</p> <p>Weight: Controller 0.91 lb. (2kg) Sensor 0.23 lb. (0.5kg) (one pair)</p> <p>Cable Length 16 ft. (5 meters)</p>

SPLICE DETECTOR SYSTEM

Senses splices or double thicknesses in translucent papers allowing splices to pass without web damage.

The Splice Detector System normally operates with no operator input. Three seconds after a single thickness of web is inserted into the sensor gap, the controller calibrates itself to the web thickness. From then on, the system will give the alarm signal whenever the web thickness is exceeded, as by a splice or double sheet.

Presence of a new web thickness in the sensor gap for more than three seconds will cause the controller to recalibrate to the new web.

Specifications

Supply Voltage:
115, 127, 220, 240 VAC

Power Supply Fuse:
250 VAC 0.1A slow blow

Output Contact Rating:
200 VAC, 2A

Output Time:
3 seconds (approximately)

Temperature Range:
32-122°F (0-50°C)

Detectable Web Thickness:
0.002" - 0.008" (0,05 to 0,2 mm)
paper or equivalent

Nexen-Nireco

Splice Detector System

Senses splices or double thicknesses in translucent papers allowing splices to pass without web damage.

The Splice Detector System is a two component system composed of a JD 100 Splice Sensor and a JC 100 Splice Controller.

The JC 100 Splice Controller provides the excitation signal to the sensor and reads the return

signal. The JD 100 displays a red LED "output" lamp, and changes the state of a normally open (N.O.) or normally closed (N.C.) relay, when a splice or double thickness is detected. The contact change lasts for about three seconds and then automatically returns to its normal state.

The Splice Detector System is ideally suited for use where high nipping pressures in a machine must be momentarily relaxed to allow a splice to pass through without damaging webs, blankets or other components.

Features and Benefits

- Automatic recalibration to new web thickness—**needs no operator set up.**
- Incandescent lamp type sensor—**easy to visually check the lamp operation.**
- Web thickness is measured by light transmission—**no false triggering due to web flutter.**
- Circuitry designed for extra long lamp life and resistance to power fluctuation fading—**lower maintenance.**

"Air Champ"

CONTROLS

THE NEXEN FRL SYSTEM

- ▶ Modular.
- ▶ Simple, compact design.
- ▶ Easily serviced — no special tools required.
- ▶ Body shape allows regular mounting in any of four positions, at the 90° increments, relative to the filter and lubricator.
- ▶ Solid porting, .250" sizes.
- ▶ Threaded bowl attachment.
- ▶ Simple joining method uses standard machine screws.
- ▶ Designed to meet or exceed NFPA standards, and other international specifications.
- ▶ Regulator features non-rising, tamper-resistant adjusting knob.
- ▶ Metal bowls — standard.

FILTER

Self-sealing, plastic deflector — no gasket. One-piece molded element-retainer and baffle.

- ▶ Flow: 39.5 SCFM
- ▶ Port Size: .25" NPTF
- ▶ Temperature Range: 40°-180° F (4.4°-82.2°C)
- ▶ Pressure Range: 300 Psig Max. (20.4 Bars)
- ▶ Bowl Capacity: 1.5 oz. Std.
- ▶ Body: Zinc
- ▶ Bowl: Metal
- ▶ Drain: Manual Drain
- ▶ Filter Rating: 5 Micron
- ▶ Weight. per Unit: .91 lbs.

Product No. 939101

NOTE — All flows taken at 100 Psig inlet pressure, and 5 Psig pressure drop.

► **REGULATOR**

Features non-rising adjustment knob. Aspirator for performance. Dual in-line gauge ports. Alignment system allows four different orientations. at 90° increments, relative to the filter and lubricator.

- Flow: 39.4 SCFM
- Port Size: .25" NPTF
- Supply Pressure: 300 Psig Max. (20.4 Bars)
- Pressure Range: 0-125 Psig (0-8.5 Bars) std.
- Temperature Range: 40°-120° F (4.4°-48.9°C)
- Piston Operated
- Relieving
- Body: Zinc
- Spring Cage: Celcon
- Bottom Plug: Celcon
- Adjustment Mech.: Locking Knob
- Weight per Unit: .824 lbs.

Product No. 940001

NOTE: Flows taken at 100 Psig inlet pressure, and 25, 50 and 75 Psig reduced pressures.

► **LUBRICATOR**

Proven fog-type design. Has anti-vibration, tamper-proof adjustment.

- Flow: 53.4 SCFM
- Port Size: .25" NPTF
- Temperature Range: 40°-180° F (4.4°-82.2°C)
- Pressure Range: 300 Psig Max. (20.4 Bars)
- Bowl Capacity: 1.5 oz. Std.
- Body: Zinc
- Bowl: Metal
- Weight. per Unit: .94 lbs.

Product No. 939201

NOTE — All flows taken at 100 Psig inlet pressure, and 5 Psig pressure drop.

► **LUBRICATOR DRIP RATE SETTING**

A. Determine the average internal air volume of the clutch or brake. See clutch and brake air volume/rate data pages 367 and 368.
 Example: Nexen Brake Model T-1000
 $Average\ Volume = V_n + V_o/2 = 1.739 + 8.656/2 = 6.067$ cubic inches.

B. Multiply the result in step A by the maximum cycle rate per minute.
 Example: At 20 cycles per minute;
 $Cubic\ Inches\ per\ Minute = 20 \times 6.067 = 121.34$

C. Determine the CF factor for the air pressure setting from the graph on page 366.
 Example: The CF factor for 80 psi = 6.5

D. Multiply the result in Step B by the CF factor to determine the cubic inches of free air;
 Example: $6.5 \times 121.34 = 788.7$ cubic inches per minute of free air.

E. Divide the result in step D by 1728 to convert to cubic feet per minute.
 Example: $788.7/1728 = 788.7/1728 = .456$ cubic feet per minute.

NOTE: Nexen recommends one drop of oil for every 20 cubic feet of air.

F. To determine the amount of time between drops, divide 20 by the flow rate.
 Example: Divide 20 by the result of step E; $20/.456 = 44$ minutes between drops of oil.

WARNING

The polycarbonate plastic material used to manufacture the sight dome may be attacked by certain chemicals. Do not use this lubricator on systems with air supplied by a compressor lubricated with synthetic oils or oils containing phosphate esters or chlorinated hydrocarbons. These oils can carry over into the air lines and chemically attack and possibly rupture the sight dome. Also, do not expose the sight dome to materials such as carbon tetrachloride, trichlorethylene, acetone, paint thinner, cleaning fluids, or other harmful materials, for they too will cause the plastic to craze and/or rupture. For use in environments where these, or any, chemicals may be present, consult the factory for approval.

CONTROLS

3-WAY CLUTCH OR BRAKE CONTROLS

.125” or .250” NPT, 3-Way Controls feature 6 watt coils. Available in three mounting configurations, normally open and normally closed. For explosion proof or encapsulated coils, consult factory. 0-150 psi operating range standard.

3-Way Controls, In-Line Mount

Valve	Operating Range (PSI)	Effective Orifice	Port Size ^①	Volts ^②	Power Consumption	Product Number

NORMALLY OPEN (N.O.)

DE-ENERGIZED
Allows air supply to flow to a clutch or brake.

ENERGIZED
Blocks the air supply and allows the air in the clutch or brake to exhaust.

NORMALLY CLOSED (N.C.)

DE-ENERGIZED
Blocks the air supply to a clutch or brake.

ENERGIZED
Allows air supply to flow to a clutch or brake.

CLUTCH OR BRAKE CONTROL PANEL

Compact Regulator, 3-way toggle switch and gauge fitted into attractive contoured case. Ideal for wall mounting. Simply connect inlet and outlet. Regulator hand wheel lock discourages unwanted adjustment.

- 5-125 psi range
- .09375” internal flow passages, Flow rate: 150 SCFM at 100 psi.
- 300 psi max. inlet pressure.
- 180° F max. operating temp.
- .125” NPT Air line connections

Product No. 854000

APPROXIMATE DIMENSIONS

▶ **SPOOL CONTROLS - 4 AND 5 WAY CLUTCH-BRAKE CONTROLS**

A 4 way control directs a common air supply to the clutch or brake providing the same outlet pressure to each cylinder.

A 5 way control directs a separate pressure air supply to the clutch and brake providing different pressures to each cylinder. Each cylinder exhausts through the port marked “IN”.

SPOOL CONTROLS

▶ **Single Solenoid Models**

Style	Product Number	Operating Range(PSI)
4-Way, Internally Piloted	170012	20 - 150
4/5-Way, Externally piloted	170013	0 - 150

Product Number	Effective Orifice	Port Size	Voltage	Power Consumption
170012	.188 in	.25 NPT	120 AC	6.3 VA
170013	.188 in	.25 NPT	120 AC	6.3 VA

Single Solenoid Models are not suitable for non-lubricated air applications

APPROXIMATE DIMENSIONS - SINGLE SOLENOID MODELS

▶ **Double Solenoid Models**

Style	Product Number	Operating Range(PSI)

Standard	170024	240 VAC	6.4VA

C_v Flow: Up to 1.4

CONTROLS

ADJUSTABLE PRESSURE CLUTCH OR BRAKE FLOW CONTROL

A spring biased ball or optional poppet check provides full flow in one direction. A stainless steel, tapered needle provides a wide range of adjustment of flow in the controlled direction. A locknut prevents unwanted changes in adjustment.

This control allows higher air pressure for maximum torque capacity while achieving a “soft” start or stop through a gradual pressure build-up in the clutch or brake air chamber.

Controlled acceleration or deceleration (“soft” start or stop) can also be incorporated into a clutch/brake circuit similar to the 3 way circuit diagram shown on page 351, by adding a flow control, quick exhaust valve and accumulator between the control valve and the clutch/brake unit.

Pipe Size	C _v Maximum open Needle	C _v Flow Check	Product Number
.125 NPT	.20	.23	940412
.250 NPT	.43	.54	940425

APPROXIMATE DIMENSIONS

.125 NPT	Inches	.875	.688	.203	1.75
.250 NPT	Inches	1	.875	.359	2.375

SPECIFICATIONS

scfm = 22.67 (C_v)

Where: P1- P2 = Pressure Drop Across Flow Control
G = Specific Gravity of the Liquid at Flowing Temperature (G = 1 for air)

Operating Temperature Range = -40°F to +212°F

RESTRICTOR-FIXED PRESSURE CLUTCH OR BRAKE FLOW CONTROL

Fixed orifice restrictor slows down flow rate in one direction, yet allows free flow the other way. Used to retard clutch or brake engagement until another function is complete. Ideal when alternately pressurizing two systems with one control switch. Standard pipe threads allow in-line plumbing.

- .125 NPT Product No. 932800
- .250 NPT Product No. 933800

APPROXIMATE DIMENSIONS

Restrictor Dim	NPT	A	NPT	A
Inches	.125	1.75	.25	1.75

EXHAUST MUFFLER

Mufflers truly silence noisy air exhaust. Extremely low air resistance in the unit means no interference with system operation difficulties due to back pressure.

▸ **3-WAY MANUAL CLUTCH OR BRAKE CONTROL**

3-way manual control comes complete with escutcheon plate and mounting screws. Use to override automatic controls in emergencies or pilot a 4 or 5 way control. 3/32” internal orifice.

Product No. 944901

C_v Flow: Up to 0.34

3-WAY MANUAL CONTROL

Dim	A	B	C	D	E	F
Inches	3.50	1.42	0.87	0.79	0.83	0.39

APPROXIMATE DIMENSIONS

▸ **CLUTCH OR BRAKE - QUICK EXHAUST/SHUTTLE VALVE**

Mounts directly to the clutch or brake air chamber inlet where air and airline impurities are exhausted directly to the atmosphere by a 3-5 psi drop in the supply pressure. Increases clutch and brake response times because air need not travel thru long lines back to the control. Can also eliminate overlap in clutch-brake combinations. Use also as a shuttle valve when alternating supplying cylinder with two pressures.

- 1 each, Adapter (.125 NPT. to .250 NPT.)

5-WAY DOUBLE SOLENOID SPOOL CONTROL — EXTERNALLY PILOTED FOR OPERATING CLUTCH AND BRAKE AT DIFFERENT AIR PRESSURES USING ONE CONTROL — FROM 20 TO 100 PSI

CONTROL KIT - TWO UNITS

For controlling air to two units or to a combination clutch/brake, select from the following:

Product Number	Description
940013	Control Kit. 4/5 Way (.125" NPT Quick Exhaust Valves & Mufflers)
940014	Control Kit. 4/5 Way (.25" NPT Quick Exhaust Valves & Mufflers)

These kits Contain:

- 1 each, Double Solenoid 4/5 Way Externally Piloted Spool Valve (.125 NPT.)
- 1 each, Filter (.250 NPT.)
- 2 each, Regulator (.250 NPT.)
- 2 each, Lubricator (.250 NPT.)
- 2 each, Quick Exhaust Valve (.125 or .250 NPT.)
- 2 each, Mufflers (.125 or .250 NPT.)

NOTE : Externally piloted, double solenoid spool valves can be connected for 4 or 5-Way operation.

▸ TYPICAL CIRCUIT DIAGRAMS

▶ CLUTCH AND BRAKE SELECTION

Clutch and brake selection is rather simple when the functions of the machine are clearly defined. Make sure that the location, shaft size, heat dissipation capacity and speed specifications are compatible with the clutch or brake selected. Match the machine requirements to a clutch or brake that is large enough to handle the load.

First, classify the application.

Occasional start or stop:

Applications where a clutch disconnects the prime mover (usually an electric motor) from the machine at cycle rates of less than four or five times a minute..

Torque and transmitted horsepower are important considerations of applications of this type.

Cyclic start and stop:

Applications where the clutch or brake cycles more than five per minute, fall into this classification. Inertia, torque, energy per cycle, heat sink capacity and response time all may require evaluation.

High inertia start or stop:

Applications of this type are identified by a requirement to start or stop heavy rotating rolls or flywheels in a specific length of time. Start or stop periods of more than 1.0 second are typical of this application type. Thermal characteristics and torque are very important considerations when high inertia loads are present.

Continuous slip or constant tensioning:

Applications of this type appear frequently in the paper or textile industries where material is pulled from a roll. A clutch or brake is connected to the shaft supporting the rolls to provided tension in the material. Heat dissipation is the primary concern for the clutch or brake.

Many clutch and brake selections are successfully made on the basis of transmitted horsepower and speed only.

For these applications it is a simple matter of solving the basic torque formulas and selecting a unit from the torque vs. air pressure graphs in the Air Champ catalog or various other product brochures.

Nexen also provides selection charts that suggest specific models at various transmitted horsepower and speeds. These charts include an appropriate service factor for the selected model.

Motor frame charts showing models which fit the motor shaft and/or NEMA “C” flanges are provided for some models. A general rule-of-thumb for motor mounted applications is: if the unit fits the motor, it will do the job. Nexen units have adequate torque to handle what the motors deliver.

Applications where the clutch or brake do not fit the motor require an evaluation of inertia, torque and thermal characteristics. Thermal characteristics are very important for high inertia or high cyclic applications. Do not select a unit from the catalog selection charts if high inertia loads are present.

Location is one of the most important things to consider when making a clutch or brake selection. Since torque (in. lbs) equals $\frac{63000 \times \text{HP}}{\text{RPM}}$,

clutch or brake should be located on the highest speed shaft in the drive train. An ideal location is directly on the motor shaft. Mounting is easier and more convenient. Lower torque requirements mean smaller diameter units, which result in **considerable** cost savings.

Because “Air Champ” Clutches and Brakes are rugged and designed with high thermal horsepower ratings, we can use the following rule-of-thumb for selecting the proper size unit for your application:

Ninety percent of the time you can make your clutch/brake selection based on the torque requirement alone. It’s that simple. Sure it’s important to use a service factor, but for the most part the torque requirement is your prime consideration when choosing which size clutch to use.

For severe applications with high inertia loads and high cycle rates, you also need to consider the thermal horsepower requirement.

▶ CLUTCH & BRAKE SERVICE FACTOR

A service factor of 1.2 to 2 should always be used when operating at any air pressure. The service factor is dependent on the severity of the application. It is not recommended that a clutch or brake be used in an application at its maximum designed torque.

► INERTIA VALUES OF VARIOUS COMPONENTS

All values unless specified are in Lb In². To convert to Lb Ft² use the following formula:

$$\frac{LB\ IN^2}{144} = LB\ FT^2$$

► INERTIA (WK²)

The value of WK² is important for applications involving time, cyclic duty or when starting or stopping heavy loads. Use one or all of the three methods as shown here to estimate the inertia.

1. The inertia of solid steel shafting is given in the following table. The values shown are for one inch of shaft length.

Dia. (In.)	WK ² (Lb. Ft. ²)	Dia. (In.)	WK ² (Lb. Ft. ²)	Dia. (In.)	WK ² (Lb. Ft. ²)
0.750	0.00006	7.500	0.6110	13.250	5.9600
1.000	0.0002	7.750	0.6990	13.500	6.4200
1.250	0.0005	8.000	0.7910	13.750	6.9100
1.500	0.0010	8.250	0.8950	14.000	7.4200
1.750	0.0020	8.500	1.0000	14.250	7.9700
2.000	0.0030	8.750	1.1300	14.500	8.5400
2.250	0.0050	9.000	1.2700	14.750	9.1500
2.500	0.0080	9.250	1.4100	15.000	9.7500
2.750	0.0110	9.500	1.5500	16.000	12.6100
3.000	0.0160	9.750	1.7500	17.000	16.0700
3.500	0.0290	10.000	1.9300	18.000	20.2100
3.750	0.0380	10.250	2.1300	19.000	25.0800
4.000	0.0490	10.500	2.3500	20.000	30.7900
4.250	0.0630	10.750	2.5800	21.000	37.4300
4.500	0.0790	11.000	2.8300	22.000	45.0900
5.000	0.1200	11.250	3.0900	23.000	53.8700
5.500	0.1770	11.500	3.3800	24.000	63.8600
6.000	0.2500	11.750	3.6800	25.000	75.1900
6.250	0.2960	12.000	4.0000	26.000	87.9600
6.500	0.3450	12.250	4.3500	27.000	102.3000
6.750	0.4020	12.500	4.7200	28.000	118.3100
7.000	0.4640	12.750	5.1100	29.000	136.1400
7.250	0.5350	13.000	5.5800	30.000	155.9200

To determine WK² of a given shaft or disc, multiply the WK² given in the chart by the length of shaft, or thickness of disc, in inches.

NOTE: For hollow shafts, subtract WK² of the I.D. from WK² of the O.D. and multiply by length.

2. For solid cylinders of a given weight, WK² is estimated from the formula:

$$WK^2 = W \left(\frac{R}{2}\right)^2$$

Where: WK² = inertia in lb. ft.²
R = cylinder radius in ft.
W = weight in lbs.

3. For solid or hollow cylinders, the inertia is calculated by the following equations:

Solid Cylinder

$$WK^2 = .000681 p LD^4$$

Hollow Cylinder

$$WK^2 = .000681 p L (D_2^4 - D_1^4)$$

$$WK^2 = lb\ ft^2$$

Where: D, D₁, D₂, L = Inches
P = lb/in³
Where: P (Aluminum) = .0924
P (Cast Iron) = .260
P (Steel) = .282

Calculate the inertia of complex, concentric, rotating parts by breaking the part into simple cylinders, calculating their inertia and summing the values of each.

In applications where the speed of the load is different from the speed at the clutch or brake, the value of WK² is referred to as reflected inertia.

► TORQUE

English

Calculate the required torque. Estimate the torque requirements based on the rated horsepower of the prime mover.

$$T = \frac{63000(HP)K}{RPM}$$

T = torque in in. lbs.

HP = horsepower

RPM = Speed at clutch or brake

If the driven load has heavy rotating parts that must be started or stopped in a specific time, evaluate the torque from the formula:

$$T = \frac{.039 (WK^2) \Delta RPM}{t}$$

T = average torque in in. lbs.

WK² = total inertia load in lb. ft.²

RPM = initial RPM – final RPM

t = time in seconds for ΔRPM

The time (t) in seconds required to accelerate or decelerate a rotating mechanism is estimated as follows:

$$t = \frac{.039 (WK^2) RPM}{T}$$

t = required starting or stopping time

WK² = total inertia load in lb. ft.²

PRPM = speed at the clutch or brake

T = rated clutch or brake torque

Metric

$$T = \frac{P(9545)K}{n}$$

T = torque in Newton meters (Nm)

P = transmitted power in kilowatts (kW)

n = speed at clutch or brake

If the driven load has heavy rotating parts that must be started or stopped in a specific time, evaluate the torque from the formula.

$$T = \frac{(J) \Delta n}{t(9.55)}$$

T = average torque in Newton meters (Nm)

J = total inertia load in kgm²

Δn = initial RPM – final RPM

t = time in seconds for Δn

The time (t) in seconds required to accelerate or decelerate a rotating mechanism is estimated as follows:

$$t = \frac{(J) n}{(9.55) T}$$

t = required starting or stopping time in seconds

J = total inertia load in kgm²

Δn = speed at the clutch or brake

T = rated clutch or brake torque

NOTE — A service factor (K) is required to determine the actual torque that the clutch must deliver. For example, some electric motors will deliver three times their rated horsepower for a short period of time. The clutch or brake must be capable of handling the maximum possible output.

NOTE — Torque increases as the speed decreases. Mount the clutch on the highest speed shaft available.

APPLICATION ENGINEERING DATA

“Air Champ”

► THERMAL CHARACTERISTICS

Check the clutch or brake heat sink capacity for high inertia starts or stops and the continuous thermal horsepower dissipation requirement for cyclic starts and stops.

English

1. Calculate the energy per cycle (E_C) absorbed by the clutch or brake each start or stop by the formula.

$$E_C = .00017 (WK^2) (N_2 - N_1)^2$$

E_C = rotational energy in ft lbs.
 WK^2 = total inertia load in lb. ft.²
 N_1 = Initial RPM
 N_2 = Final RPM

Select a clutch or brake that has a heat sink capacity which exceeds the energy in ft. lbs. produced during each start or stop.

2. Determine the continuous thermal horsepower (HP_t) requirement.

$$HP_t = \frac{(E_C)CPM}{33000}$$

E_C = rotational energy in ft. lbs. when the clutch or brake is applied.
 CPM = the number of starts or stops per minute.

Select a clutch or brake that has a continuous thermal horsepower rating at operating speed that exceeds the thermal horsepower requirement. Refer to the charts on page 363.

Permissible cycles per minute are estimated using the formula:

$$CPM = \frac{HP_t(33,000)}{E_C}$$

HP_t = rated clutch or brake continuous thermal HP dissipation
 E_C = rotational energy in ft. lb. when the clutch or brake is applied

Cycle duty theoretically can be as much as 100 CPM or more. However, the practical limit depends upon the ability of the clutch or brake to dissipate heat rather clutch or brake response time. Each time a machine starts or stops, heat is generated at the clutch or brake interface. This heat energy is equal to energy per cycle (E_C) of the rotational inertia at operating speed.

Metric

1. Calculate the energy per cycle (E_C) absorbed by the clutch or brake each start or stop by the formula:

$$E_C = \frac{J (\Delta n)^2}{182.4}$$

E_C = rotational energy in Joules when the clutch or brake is applied
 J = total inertia load in kgm²
 Δn = initial RPM – final RPM

Select a clutch or brake that has a heat sink capacity which exceeds the energy in Joules produced during each start or stop.

2. Determine the required continuous thermal in kw (P_{th})

$$P_{th} = \frac{E_C/60 (CPM)}{1000}$$

E_C = rotational energy in Joules when the clutch or brake is applied.
 CPM = the number of starts or stops per minute.

Select a clutch or brake that a continuous thermal dissipation rating at operation speed that exceeds the thermal dissipation requirement. Permissible cycles per minute are estimated using the formula:

$$CPM = \frac{P_{th} 60}{E_C}$$

P_{th} = Rated clutch or brake continuous thermal dissipation
 E_C = Rotational energy in Joules when the clutch is applied

All data obtained by using 8 inch long 1/4 inch diameter hose, 1/8 inch NPT fittings and quick exhaust valves.

Obtain CR values for units from table page 365 and 366. Read times at 100 PSIG directly from CR vs Response Time graphs below

▶ **3-WAY VALVE RESPONSE TIMES**

▶ **4-WAY VALVE RESPONSE TIMES**

- t_v = Valve delay time
 $t_v = 5$ msec for .062, 3 way valve
 $t_v = 8$ msec for 4 way valve, pilot operated
 $t_v = 70$ msec for 4 way valve, spring operated
- t_1 = Time from start of valve open to start of torque rise
- t_2^{90} = Time from start of torque rise to 90% value of torque
- t_2^{100} = Time from start of torque rise to 100% value or torque
- t_3 = Time from start of valve exhaust to start of torque decay
- t_4^{10} = Time from start of torque decay to 10% value of torque
- t_4^0 = Time from start of torque decay to 0% value of torque

Correction factor for operating pressures less than 100 PSIG Use formula $t_p = C_p (t)_{100}$

- t_p = Response time at pressure P
- C_p = Response pressure factor at pressure P from graph.
- t_{100} = Response time at 100 PSIG

Correction factor for hose lengths greater than 8 inches (1-10 FT) Multiply all response times by C_L where $C_L = \frac{t_1 + .7(L - .66)}{t_1}$

- t_1 Found below at operating pressure
- L Length of hose in feet

▶ **3-WAY CORRECTION FACTOR GRAPH**

▶ **4-WAY CORRECTION FACTOR GRAPH**

▶ **TORQUE RISE RESPONSE**

EXAMPLE: Determine the various response times defined for a 625 Modular Brake operating at 75 PSIG using a Nexen 4-way valve.

SOLUTION: I. Determine the response times at 100 PSIG.

- 1.) Obtain the response factor, C_R , from the Clutch and Brake Data Table page 365 and 366 $C_R = .096$.
- 2.) Read the response times at 100 PSIG directly off the 4-way C_R vs. Response Time graph; $t_1 = 14$ msec, $t_2^{90} = 27$ msec, $t_3 = 14$ msec, $t_4^{10} = 34$ msec, $t_4^0 = 46$ msec.

II. Correct the response times for 75 PSIG.

- 1.) Obtain the C_p factor from the 4-way Correction Factor Graph.
- 2.) Calculate the corrected response times using the formula $(t)_{75} = C_p (t)_{100}$.
 i.e. $(t_1)_{75} = (1.25) (14 \text{ msec}) = 17.5 \text{ msec}$
 $(t_2^{90})_{75} = (1.08) (27 \text{ msec}) = 29.2 \text{ msec}$
 likewise the following are obtained: $(t_2^{100})_{75} = 46 \text{ msec}$, $(t_3)_{75} = 13.3 \text{ msec}$
 $(t_4^{10})_{75} = 24 \text{ msec}$, $(t_4^0)_{75} = 36.8 \text{ msec}$

NEW UNIT TORQUE

The initial torque on new units can be 30% to 40% less than the catalog value until the friction facing and friction disc are lapped or worn in.

FRICTION FACINGS

The torque ratings expressed in this catalog are the products equipped with standard friction facings. Friction facings are identified with two color code stripes on the outside edge.

Two red stripes - Standard Facings	100% Std Torque
Two green stripes - LOCO Facings	60% Std Torque
Two blue stripes - Ultra-LOCO Facings	40% Std Torque
Two purple stripes - HICO Facings	140% Std Torque

LOCO FRICTION FACINGS

“Air Champ” has special low coefficient (LOCO) and Ultra LOCO friction facings available for a number of clutches, brakes and clutch/brakes.

Typical uses for LOCO and Ultra LOCO friction facings include soft start or stop applications where more slippage is desired. Soft starts increase engagement time which reduces peak input thermal spikes. LOCO and Ultra LOCO friction facings are used in constant slip applications where a large unit is required for high continuous thermal dissipation. Contact your local Nexen Distributor for availability.

HICO FRICTION FACINGS

“Air Champ’s” high coefficient (HICO) friction facings are available for applications where higher torque is required. With HICO friction facings the unit’s static torque capacity is approximately 40% higher than catalog rated torque.

Typical uses for HICO friction facings include emergency stops and starts.

HICO friction facings are used to increase a clutch or brake’s torque output when a large, standard unit will not fit a particular envelope dimension.

Contact your local Nexen Distributor for availability.

FREE AIR VOLUME CONSUMPTION

Compression Factor (C_F) Vs. Operating Pressure

Cubic inches of free air consumed per cycle = C_F multiplied by the air chamber volume obtained from the Clutch and Brake Data tables.

AIR FLOW RATE IN CFM AT 70°F

► MISALIGNMENT TABLES

Friction Clutches

The following table and drawing represents misalignment capabilities for Dodge Taper-Lock Poly Disc Couplings. The values are based upon the coupling maximum capability for individual misalignment.

These tabulated values may not be combined. Review the drawing and the table for information regarding the Clutch and application.

Dodge Taper-Lock Poly Disc Couplings

Measured Variation at Points 180 degrees Apart

Clutch Model	Coupling Size (In)	Parallel Maximum (In)	Angular Maximum (In)	Axial Float Maximum Value from recommended Initial Spacing (In)
F-450	2.625	0.015	0.040	+0.125

4. Shaft Extension/Sleeve Bushing(if needed)*

*Same length as clutch.

Tooth Clutches (5H), Torque Limiters (TL) and Multiplate Clutches (4H)

Flexible Couplings

Use these tables if you are attaching a Flexible Coupling to a Tooth Clutch (5HP, 5HP-E, 5HP-SP, 5HPSP-E), Multi-Disc Clutch (4HP) or Torque Limiter (TL-A, TL-AE, TL-AC).

The following tables represent misalignment capabilities for Single & Double Flex Coupling Assemblies. The values are based upon the maximum capability for individual misalignment.

If parallel, angular and axial misalignment are all required, be certain that the combined percentage of each does not exceed 100%. For instance, if 100% of the parallel misalignment rating is required, no angular or axial misalignment is allowed. If 50% of the parallel misalignment is required, only 50% of the angular misalignment OR 50% of the axial rating will be available.

Find the Product Number of the Flexible Coupling you are using in your application and take note of the misalignment values allowed.

Single Flexible Couplings

Product Number	Angular (Degrees)	Axial (In)	Parallel (In)
909980	1.5	0.065	0.011

▶ PEAK INPUT RATE

The Peak Input Rate Capacity is the limiting factor in high inertia starts and stops. It is the rate at which the clutch or brake absorbs heat (at friction interface) during the acceleration period, while the interfaces are slipping or until the load and the clutch are operating at the same speed. This heat will generally not or exceed the Peak Input Capacity unless the acceleration time exceeds clutch or brake transient time.

Transient time is the time required to reach the air pressure setting. The correct Input Rate occurs when the start-up time is greater than the response time of the clutch or the stopping time is greater than the response time of the brake. Increasing the response time (by using a control valve with a small orifice, or adding an air cavity between the valve and the unit) increases the start-up time. This reduces the thermal peaks that create damaging thermal gradients with the friction plate.

The Peak Input Rate during such a start is evaluated from an estimate of the speed difference between the facing and the friction disc at the end of the transient period and the torque value expected at the air pressure setting. The safe Peak Input Rate of a clutch or brake with cast iron plates and organic friction linings is approximately 0.9 horsepower per square inch of interface area.

Refer to the Function Example for High Inertia Starts or Stops on page 381 for a working example of this product selection consideration.

Calculating Peak Input Rate Capacity:

Calculate the speed change (ΔN_1) during the transient period. Assume 50% torque and a transient time of 0.1 second for most applications.

Formula: $\Delta N_1 = \frac{T(t)}{0.039 (WK^2)}$

T = rated clutch or brake torque
 t = required transient time in seconds
 WK² = total inertia load in pound-feet²
 ΔN_1 = speed change as measured in RPM

The speed difference (N_d) between the facing and friction disc at the end of the transient period is the difference between full speed (RPM) and the speed change (ΔN_1).

Formula: $N_d = \text{RPM} - \Delta N_1$

N_d = speed difference in RPM
 RPM = rating of the clutch or brake
 ΔN_1 = speed change in RPM

Calculate the Peak Thermal Input in horsepower (HP) for your application.

Formula: $HP = \frac{N_d (T)}{63000}$

HP = peak thermal input of application
 N_d = speed difference in RPM
 T = torque at the set air pressure

Calculate the Peak Thermal Input of a clutch or brake.

Formula: $P_{th} = I_a (0.9)$

P_{th} = clutch or brake thermal input
 I_a = effective interface area (see catalog table for product)

Compare your applications Peak Thermal Input requirement with that of the clutch or brake. If the clutch or brake has a higher Peak Thermal Input calculation than your applications requirement, you are using the correct product.

► **SPROCKET TABLES**

The tables below indicate compatible Sprocket options for the applicable Clutch.

1. Find your specific Clutch Model Number.
2. Determine a Chain Size and minimum T Configuration from the table.

Refer to the Clutch drawing to obtain pilot diameter, bolt circle, hole size and location information. Some minimum sprockets may not provide sufficient load carrying capacity, due to the application. If in doubt, consult Nexen to insure suitability.

FUNCTION EXAMPLES

“Air Champ”

DISCONNECT:

A simple clutch function that produces remote, automatic, occasional disconnection of one operation from the rest of the machine — or one machine from another. A 5HP-SP single position clutch is often used where exact registration or timing is required.

SELECTION CONSIDERATIONS:
Transmitted horsepower
Torque
RPM

EXAMPLE

A clutch is required to disconnect the power of a 10 horsepower, 1750 RPM motor from the drive shaft of a printing press. Exact registry of the printing rolls is required when the clutch is engaged. The clutch is mounted on the driven shaft and is connected with a chain and sprockets at a speed ratio of 1:1.

This application is classified as an occasional start. Select a clutch based on the transmitted horsepower and RPM. Use a service factor of 2.

TORQUE CALCULATION:

$$\begin{aligned} \text{Torque} &= \frac{63,000(\text{HP})K}{\text{RPM}} \\ &= \frac{63,000(10)2}{1750} = 720 \text{ in. lbs.} \end{aligned}$$

UNIT SELECTED:

A 5H30P-SP, Single Position Tooth Clutch Product Number 912100.

CONTROL CIRCUIT

A cam switch, used for timing, energizes the clutch control circuit.

3-WAY CONTROL — N.C. —
ENGAGES CLUTCH OR BRAKE WHEN
ACTUATOR SWITCH IS CLOSED

“Air Champ”

FUNCTION EXAMPLES

HOLDING:

A brake function to clamp (hold) a machine or mechanism in place. Often it’s desirable to use a spring–engaged brake.

SELECTION CONSIDERATIONS:
Torque

EXAMPLE

In the event of a power or air loss to the system, the spring set caliper brake engages and holds the incline conveyor at rest preventing it from “freewheeling” due to gravitational forces. This application is classified as an occasional stop.

TORQUE CALCULATION:

Measure the required torque directly using the torque lever method:

$Torque = P(R) SF$

Where:

- P = Pounds of pull to turn the load
- R = Radius of the conveyor drum in inches
- SF = Service factor

EXAMPLE

The measured pounds of pull it takes to start and keep turning the 12 inch radius drum is 500 pounds.

$Torque = 500(12)2 = 12000 \text{ in. lbs}$

UNIT SELECTED:

A Spring Actuated BD Caliper Brake, Product Number **933500** with an 18 1/4 inch diameter disc, Product Number **934200**.

CONTROL CIRCUIT

The brake is activated when the switch on the control panel is moved to the off position allowing air to be removed from the spring hold–off air canister.

FUNCTION EXAMPLES

“Air Champ”

REVERSING AND MULTIPLE SPEED:

Multiple clutches can change speed and/or direction — providing a reduced load on the motor and starter (the motor never stops), faster changes and higher cycling capabilities.

SELECTION CONSIDERATIONS:
Transmitted horsepower
Torque
RPM

EXAMPLE

Two clutches are used a reversing drive. By alternating engagement from one clutch to the other, the line shaft reverses direction. Because the sprocket diameters vary from drive A to B, the speed of the drive changes each time it reverses direction. The clutches are mounted on the output shafts of a bevel gear box which are rotating at 383 RPM. The gear box is driven by a 1/2 horsepower motor.

TORQUE CALCULATION:

$$\text{Torque} = \frac{63000(\text{HP})K}{\text{RPM}} = \frac{63000(.5)2}{383} = 165 \text{ in. lbs}$$

UNIT SELECTED:

Two L-600, Pilot Mount clutches,
Product Number 805270.

CONTROL CIRCUIT

Each clutch is cycled six times per minute. For this reason, a double solenoid, 4-way spool valve is selected.

The double solenoid feature provides quick response in both spool shift directions.

4-WAY DOUBLE SOLENOID SPOOL CONTROL INTERNALLY OPERATED FOR CLUTCH AND BRAKE OPERATING FROM 30 TO 100 PSI

“Air Champ”

FUNCTION EXAMPLES

INCHING AND JOGGING:

To position, set-up, thread or check out a machine. This motion is usually sudden and uncontrollable; hard on motors and starters.

A clutch or clutch/brake provides gentle inch/jog function that is independent of the drive motor.

► “AIR CHAMP”

PRODUCT CONSIDERATIONS:

FMCB-7-28 AND 38
FMCB-8-38 AND 42

FMCBE
625, 875, 1125, 1375

► **SELECTION CONSIDERATIONS:**

- Linear inertia**
- Rotational inertia**
- Transmitted horsepower**
- RPM**
- Torque**
- Cycle rate**
- Continuous thermal horsepower rating**

► **EXAMPLE**

A clutch-brake is placed in the drive system to position boxes, carried on a conveyor, under a hopper which fills the boxes with a product. A box is positioned under the hopper every second. This application is classified as a cyclic start-stop.

► **CONVEYOR REFLECTED INERTIA:**

$$WK^2_r = W \left(\frac{V}{2\pi N} \right)^2$$

$$= 120 \left(\frac{189}{2\pi 180} \right)^2 = 3.35 \text{ lb. ft}^2$$

Where:

- W = 120 lbs. (Conveyor load including belt)
- V = 189 FPM
- N = 180 RPM at the clutch brake

► **DRUM AND PULLEY REFLECTED INERTIA:**

$$WK^2_r = WK^2 \left(\frac{N_1}{N_{cb}} \right)^2$$

$$= 25 \left(\frac{60}{180} \right)^2 = 2.78 \text{ lb. ft}^2$$

Where: $WK^2 = 25 \text{ lb. ft}^2$

- N_1 = Speed of the load
- N_{cb} = Speed at the clutch brake

Inertia of the pulley, shaft and clutch-brake = .87 lb. ft²

Total inertia =

$$3.35 + 2.78 + .87 = 7 \text{ lb. ft}^2$$

► **TORQUE CALCULATION:**

$$T = \frac{.039(WK^2)RPM}{t} = \frac{.039 (7) 180}{1} = 49 \text{ in. lbs.}$$

Where:

- WK^2 = Total inertia in lb. ft²
- RPM = Speed at the clutch-brake
- t = Time in seconds
- T = Torque in inch pounds

► **UNIT SELECTED:**

An FWCB Clutch-Brake-Sheave with a 3.35 O.D. sheave, **Product Number 826700**.

► **THERMAL CHARACTERISTICS:**

Check the continuous thermal horsepower (HPT) requirement based on the Total Inertia, RPM and cycle rate.

► **ENERGY PER CYCLE:**

$$E_c = .00017(WK^2)(RPM)^2 = .00017(7)(180)^2 = 38.56 \text{ ft. lbs.}$$

Where: E_c = Energy per cycle in ft. lbs.

- WK^2 = Total inertia
- RPM = Speed at the clutch-brake

► **THERMAL HORSEPOWER DISSIPATION REQUIREMENT:**

$$HP_T = \frac{E_c(CPM)}{33000} = \frac{38.56(60)}{33000} = .07 \text{ horsepower}$$

Where:

- HP_T = Thermal horsepower requirement
- E_c = Energy per cycle
- CPM = Cycles per minute

From the Thermal Horsepower vs. RPM graphs the FWCB will dissipate .07 horsepower at 180 RPM.

► **CONTROL CIRCUIT**

A 4-way, double solenoid (with quick exhaust valves), control circuit is used because of the rapid cycle rate.

4-WAY DOUBLE SOLENOID SPOOL CONTROL INTERNALLY PILOTED FOR CLUTCH AND BRAKE OPERATING ABOVE 30 CPM — FROM 30 TO 100 PSI.

FUNCTION EXAMPLES

“Air Champ”

ACCURATE POSITIONING:

A brake or clutch/brake provides very precise and repeatable stopping.

Tight tolerances are held in cut-to-length systems, filling operations, and machining cycles, with limit switches, photo electric cells or proximity switches accurately sense position.

SELECTION CONSIDERATIONS:
Transmitted horsepower
RPM
Torque

EXAMPLE

A clutch-brake is necessary to accurately position a turntable carrying bins which rotate under a feeder head. The feeder head dumps a predetermined amount of material into the bins at regular, timed intervals.

The motor is a 5 horsepower, 1800 RPM, 184TC frame.

UNIT SELECTED:

A modular MDB-1125 based on the motor frame size only. The MDB-1125 consists of an MBU=1125, Product Number 935200 and an MDU-1125, Product Number 935100.

CONTROL CIRCUIT

A proximity switch energizes the 4-way clutch-brake control circuit.

4-WAY SINGLE SOLENOID SPOOL CONTROL INTERNAL PILOTED — N.C. FOR OPERATING CLUTCH AND BRAKE AT PRESSURES 50 TO 100 PSI.

“Air Champ”

FUNCTION EXAMPLES

OVERLOAD PROTECTION:

Protects expensive machinery or products from jam-ups and overloading.

Air clutches excel at this function because (1) torque level is easily and accurately set by air pressure, and (2) torque to start the load (often two to three times the desired protective torque) is compensated for a dual pressure control circuit.

- ▶ **SELECTION CONSIDERATIONS:**
Transmitted horsepower
RPM at the clutch
Torque

▶ **EXAMPLE**

A device is required to provide overload protection for the drive components which include a 1/2 horsepower, 900 RPM motor and a 100:1 reducer. This drive is powering a continually running conveyor which is feeding parts onto a heat treating oven.

The unit is mounted on the reducer output shaft which rotates at 9 RPM.

This application is classified as an occasional start. Select a Torque Limiter based on the transmitted horsepower and RPM.

$$\text{Torque} = \frac{63000(.5)}{9} = 3500 \text{ in. lbs.}$$

▶ **UNIT SELECTED:**

A TL40-A, Torque Limiter, Product Number **801522**.

▶ **CONTROL CIRCUIT**

A dual pressure circuit is used to provide 65 PSI for starting the conveyor and 30 PSI running pressure. See diagram page 111.

If an overload occurs, the Torque Limiter Interfaces separate, moving the cylinder to the outer position. This movement is detected by the limit Switch, which de-energizes the 3-way Air Inlet Mount Solenoid Valve, thus exhausting air to the Torque Limiter. Internal springs provide assistance for total Torque Limiter release.

All of the drive components down to the motor are protected from an overload.

 1150-2500

FUNCTION EXAMPLES

“Air Champ”

CONTROLLED ACCELERATION (“SOFT START”):

A clutch function that gently accelerates delicate loads or starts very heavy loads — eliminating shock from “across-the-line” starts.

A clutch reduces the load on the motor by letting it run continuously (often permitting use of smaller drive motors). Completely adjustable — from fast engagement to slow gradual acceleration.

Control is achieved by control of air pressure or air flow — or both.

An air brake is used for controlled deceleration.

SELECTION CONSIDERATIONS:
Transmitted horsepower
RPM
Torque

EXAMPLE

A clutch is needed to drive a bottle conveyor. A “soft start” is required to prevent the bottles from tipping and jamming on the conveyor. The clutch is mounted on a 7 1/2 horsepower, 1750 RPM motor.

$$\text{Torque} = \frac{63000(\text{HP})\text{K}}{\text{RPM}}$$

$$= \frac{63000(7.5)2}{1750} = 540 \text{ in. lbs.}$$

UNIT SELECTED:

An M-800 from the torque charts or from the Transmitted Horsepower vs. Speed chart on page 363.

Product Number **807650**.

CONTROL CIRCUIT

The control circuit includes a Flow Control valve which causes the air pressure to the clutch to build up slowly, giving a soft start every time.

DFE, QFE
1150-2500

“Air Champ”

FUNCTION EXAMPLES

EMERGENCY STOPPING:

A brake (usually spring-engaged) used to instantly stop a machine in the event of a jam, malfunction, tripped safety or power loss — typically where operator safety, or vertical motion is involved.

- ▶ **SELECTION CONSIDERATIONS:**
Transmitted horsepower
RPM
Torque

▶ **EXAMPLE**

A clutch-brake is required on a drive which is used to lift heavy pipe. The pipe is to be lifted across wire ropes and the clutch is engaged to lift it. A spring-engaged brake is required to prevent the pipe from falling in the event of a power or air pressure loss.

The motor is a 3/4 horsepower, 1750 RPM, 56C frame.

▶ **UNIT SELECTED:**

A FMCBES-625,
 Product Number **801623**.

Selection is based on the motor frame size only. The FMCBES-625 is an air engaged clutch combined with a spring engaged brake.

▶ **CONTROL CIRCUIT**

Controlled by a single 3-way valve. One air supply operates the combined clutch-brake.

The clutch begins to deliver torque at approximately 40 PSI. Below 30 PSI, the spring force of the brake overcomes the air cylinder thrust keeping the brake engaged.

*3-WAY CONTROL — N.C. —
 ENGAGES CLUTCH OR BRAKE WHEN
 THE ACTUATOR SWITCH IS CLOSED.*

FUNCTION EXAMPLES

“Air Champ”

CYCLING (OR INDEXING):

Continual starting and stopping is very hard on motors and starters, Motors must then be oversized and even then, they have limited cycling capability.

A clutch/brake reduces the load by letting the motor run continuously, permitting much faster cycling rates ... (often more than 100 times per minute) with only fractional power.

FMCB-7-28 AND 38
FMCB-8-38 AND 42

FMCBE AND FMCBES
625, 875, 1125, 1375

SELECTION CONSIDERATIONS:

- Rotational inertial
- Cycle rate
- Transmitted horsepower
- RPM
- Torque
- Continuous Thermal Horsepower Rating

EXAMPLE

Select a clutch-brake for a drive in a machine that die cuts paper board into cartons. The clutch is used to drive rolls that feed lengths of paper board to the die cutting head at rates up to 46 times per minute. The brake stops the feed rolls every cycle.

UNIT SELECTED:

The drive consists of a 1 horsepower, 1800 RPM motor going into a 10:1 worm gear reducer. A Modular clutch-brake, MDB-625, is selected from the NEMA Frame Selection chart in the catalog.

- MBU-625 Product Number 928500
- MDU-625 Product Number 928600

This application is classified as a cycle start-stop and requires an evaluation of the continuous thermal dissipation capacity.

ROTATIONAL INERTIA:

The value of WK² of the two 15 inch diameter, one inch wide feed rolls is taken from the Inertial of Steel Discs and Shafts chart on page 361.

$$WK^2 = 9.75 \times 2 = 19.5 \text{ lb. ft}^2$$

REFLECTED INERTIA (WK²_r):

$$WK^2_r = WK^2 \left(\frac{N_1}{N_{cb}} \right)^2 = 19.5 \left(\frac{180}{1800} \right)^2 = .195$$

Where:

- WK₂ = Feed roll inertia
- N₁ = Speed of the load
- N_{cb} = Speed of the clutch-brake

THERMAL CHARACTERISTICS:

Calculate the continuous thermal horsepower (HP_T) requirement based on the reflected inertia, speed at the clutch-brake and the cycle rate.

ENERGY PER CYCLE:

$$E_c = .00017(WK^2)(RPM)^2 = .00017(.195)(1800)^2 = 107.4 \text{ ft. lb.}$$

- Where: E_c = Energy per cycle in ft. lbs.
- WK² = Reflected inertia
- RPM = Speed at the clutch-brake

THERMAL HORSEPOWER REQUIREMENTS:

$$HP_T = \frac{E_c(CPM)}{33,000} = \frac{107.4 (46)}{33,000} = .16$$

Where:

- HP_T = Thermal horsepower dissipation requirement
- E_c = Energy per cycle
- CPM = Cycles per minute

Refer to the Thermal Capacity of Modular Units on page 249.

An MDB-625 dissipates .40 thermal horsepower continuously at 1800 RPM.

CONTROL CIRCUIT

This application utilizes two 3-way normally closed valves.

One valve is used to cycle the clutch for the feed operation. The other 3-way valve is energized to apply the brake.

HIGH INERTIA START OR STOP:

A clutch or brake used to start or stop heavy, rotating drums, rolls or flywheels in a specific length of time.

Units selected should have sufficient heat sink capacity to absorb the energy produced in each start or stop.

► “AIR CHAMP”

PRODUCT CONSIDERATIONS:

► Starts:

DPC
9T-15T

DFE, QFE
1150-2500

► Stops:

CALIPER BRAKES
BD, VC500, SPC

DFE, QFE
1150-2500

► **SELECTION CONSIDERATIONS:**

- Rotational inertia
- Torque
- Heat sink capacity
- Peak input rate capacity*

*The peak input rate capacity may be the limiting factor in high inertia starts or stops even though the Heat Sink Capacity is sufficient. The peak input rate capacity is the rate at which a clutch or brake absorbs heat at the friction interface. The generation of heat results from slip at the interfaces during an acceleration period. This heat generally will not reach or exceed the Peak Input Capacity unless the acceleration time exceeds clutch or brake transient time (time to reach the air pressure setting).

Problems only occur when the start-up time is greater than the response time of the clutch or brake. The peak input generation rate during such a start is evaluated from an estimate of the speed difference between the facing and the friction disc at the the end of the transient period and the torque value expected at the air pressure setting.

The safe Peak Input Rate Capacity of a clutch or brake with cast iron plates and organic friction linings is approximately .9 horsepower per square inch of interface area.

► **EXAMPLE**

Select a clutch to bring a roll with an inertia load (WK²) of 1800 lb. ft² from stop to 490 RPM within 2 seconds. The selected clutch must have a Heat Sink Capacity which exceeds the energy in ft. lbs. produced at each start.

► **TORQUE:**

$$T = \frac{.039 (WK^2) RPM}{t} = \frac{.039 (1800) 490}{2} = 17,199 \text{ in. lbs.}$$

Where; T = Torque in inch pounds
WK² = Inertia load in lb ft²
RPM = Speed at the clutch
t = Time in seconds

With a service factor of 1.5 the required torque is:

$$T = 1.5 \times 17,199 = 25,799 \text{ in. lbs.}$$

► **ENERGY PER CYCLE:**

$$E_c = .00017 (WK^2)(\Delta RPM)^2 = .00017 (1800) (490)^2 = 73,470 \text{ ft. lbs.}$$

Where: E_c = Energy absorbed each start in ft. lbs.
WK² = Inertia load in lb. ft²
RPM = Speed at the clutch

► **UNIT SELECTED:**

A DFE 1650-S, Product Number 964003.
Torque capacity = 27,000 in. lbs. at 60 PSI.
Heat Sink capacity = 870,000 ft. lbs.

► **PEAK INPUT RATE CAPACITY:**

Calculate the speed change (ΔN₁) during the transient period. (Assume 50% torque and a transient time of .1 second.)

$$\Delta N_1 = \frac{T(t)}{.039 (WK^2)} = \frac{13500 (.1)}{.039 (1800)} = 19 \text{ RPM}$$

The speed difference (N_d) between the facing and friction disc at the end of the transient period is the difference between full speed (RPM) and the speed change (ΔN₁).

$$N_d = RPM - N_1 = 490 - 19 = 471 \text{ RPM}$$

The peak thermal input in HP is calculated from the formula:

$$HP = \frac{N_d(T)}{63000} = \frac{471 (27000)}{63000} = 202 \text{ HP}$$

Where: T = Torque at the set air pressure

The effective interface area of a DFE 1650-S is 227 square inches. (Data from the catalog tables.)

The DFE 1650-S peak input capacity is: 227 x .9 = 204 HP

The DFE 1650-S has sufficient capacity to absorb the heat generated during the acceleration period. If the peak thermal input had exceeded the peak input capacity, the start time (t) would have to increase.

Increasing the response time, by using a control valve with a small orifice, or adding an air cavity between the control valve and the clutch, increases the transient time. This reduces the thermal peaks that create damaging thermal gradients within the friction plates.

► **CONTROL CIRCUIT:**

A 3-way valve control circuit is used to affect a relatively slow start.

3-WAY CONTROL-N.C.-ENGAGES CLUTCH OR BRAKE WHEN ACTUATOR SWITCH IS CLOSED.

FUNCTION EXAMPLES

“Air Champ”

TENSION CONTROL (REWIND):

A clutch is used on rewind stands to apply constant force (or tension) to a web of paper, film, wire or other material. The clutch must be able to handle required torque in addition to dissipating required thermal horsepower at the belted speed of the clutch.

FW-XHW
F-450
L-600
M-800
H-1000

DPC
9T-15T

TCC
10, 14 & 20

- ▶ **SELECTION CONSIDERATIONS:**
- Maximum roll diameter in inches
- Minimum roll diameter in inches
- Web speed in FPM
- Web width in inches
- Maximum rewinder horsepower
- Web tension in pounds per inch of web width

▶ **EXAMPLE**

Size a clutch for a rewind stand which has a paper roll 25 inches in diameter; a core size of 4 inches in diameter. The line speed is 200 feet per minute. The web width is 48 inches and the desired web tension is 1.5 pounds per inch of web width.

The usual practice in rewinding applications is to belt the clutch with a 5% lead (that is, 5% faster than the sheet speed) to take up the slack at the start of winding.

$$\begin{aligned} \text{Belted speed (RPM)} &= \frac{\text{Web Speed (12)} (1.05)}{\text{Min Core Dia } (\pi)} \\ &= \frac{200 (12) 1.05}{4 (\pi)} = 200 \text{ RPM} \end{aligned}$$

There are several ways to determine the maximum HP to be dissipated by the clutch. First, the web tension must be known or assumed. Then, it is most convenient to determine the clutch HP output required (total HP), and the clutch HP input at the finish of winding (web HP), while maintaining the above required HP output. The difference between the two is the HP to be dissipated by the clutch at the finish of winding.

$$\begin{aligned} \text{Web HP} &= \frac{(\text{Max Web Tension}) (\text{Web Width}) (\text{Web Speed})}{33,000} \\ &= \frac{1.5 (48) 200}{33,000} = .44\text{HP} \end{aligned}$$

$$\begin{aligned} \text{Total HP Requirement} &= \frac{(\text{Web HP}) (\text{Max Roll Dia}) (1.05)}{\text{Min Roll Dia}} \\ &= \frac{.44 (25) 1.05}{4} = 2.89 \text{ HP} \end{aligned}$$

$$\text{HP to be dissipated} = \text{Total HP Requirement} - \text{Web HP} = 2.89 - .44 = 2.45$$

The torque capacity of Nexen Clutches is usually greater than required to most centerwind applications. However, torque should be checked.

$$\text{Torque} = \left(\frac{1}{2} \text{ Max Web Tension}\right) (\text{Roll Dia}) (\text{Web Width in inches}) =$$

$$= \frac{1.5 (25) 48}{2} = 900 \text{ in. lbs.}$$

Select a clutch, from the Thermal horsepower vs. RPM graphs, that dissipates 2.45 horsepower at 200 RPM.

▶ **UNIT SELECTED:**

A TCC-20 Clutch
Refer to pages 70-74

▶ **CONTROL CIRCUIT:**

Nexen has a complete electronic Tension Control System which automatically senses tension in a web and compares it to a set desired tension level. When the web tension is more or less than the desired level, the automatic Tension Control System adjusts the air pressure to the clutch to maintain the set tension level.

TENSION CONTROL (UNWIND):

A brake is used on unwind stands to apply constant force (or tension) to a web of paper, film, wire or other material.

Tension is determined by air pressure. Because of the continuous slip operation, brakes are generally sized on thermal characteristics rather than torque.

▶ **SELECTION CONSIDERATIONS:**

- Maximum roll diameter in inches
- Minimum roll diameter in inches
- Web speed in FPM
- Web width in inches
- Web tension in pounds per inch of web width

▶ **EXAMPLE**

Size a brake for an unwind stand which has a paper roll 24 inches in diameter; a core size of 3 inches in diameter.

The line speed is 500 feet per minute. The web width is 30 inches wide and the desired web tension is 1.5 pounds per inch of web width.

$$\text{Web Tension} = \text{Web Width} \times \text{Tension}$$

$$= 30 \text{ in} \times 1.5 \text{ lbs/in} = 45 \text{ lbs}$$

$$\text{Maximum Brake HP} = \frac{\text{Web Tension} \times \text{Web Speed}}{33000} = \frac{45 \text{ lbs} \times 500 \text{ FPM}}{33,000 \text{ ft-lbs/Min/HP}}$$

$$\text{Max Torque} = \text{Web Tension} \times \text{Max Roll Radius} = 45 \text{ lbs} \times 12 \text{ in} = 540 \text{ in lb Max}$$

$$\text{Min Torque} = \text{Web Tension} \times \text{Min Roll Radius}$$

$$\text{Radius} = 45 \text{ lbs} \times 1.5 = 68 \text{ in lb Min}$$

$$\text{Max RPM} = \frac{\text{Web Speed} \times 12}{\text{Min Core Dia} \times \pi} = \frac{500 \text{ FPM} \times 12}{3 \times \pi} = 636 \text{ RPM Max}$$

$$\text{Min RPM} = \frac{\text{Web Speed} \times 12}{\text{Max Core Dia} \times \pi} = \frac{500 \text{ FPM} \times 12}{24 \times \pi} = 80 \text{ RPM Min}$$

NOTE: Effective cooling speed = $\text{RPM}_{\text{EFF}} = \text{RPM}_{\text{MIN}} + \frac{(\text{RPM}_{\text{MAX}} - \text{RPM}_{\text{MIN}})}{3}$

$$= 80 \text{ RPM} + \frac{(636 \text{ RPM} - 80 \text{ RPM})}{3} = 265 \text{ RPM}$$

Select a brake from the Thermal horsepower vs. RPM graphs, that dissipates .7 horsepower at the effective cooling speed of 265 RPM.

▶ **UNIT SELECTED:**

A XCB-10 Brake with two calipers and .35 coefficient of friction facings. Refer to pages 206-207.

▶ **CONTROL CIRCUIT:**

Nexen has a complete electronic Tension Control System which automatically senses tension in a web and compares it to a set desired tension level. When the web tension is more or less than the desired level, the automatic Tension Control System adjusts the air pressure to the brake which maintains the set tension level.

AIR VS. ELECTRIC

SEVEN REASONS WHY NEXEN'S AIR-ENGAGED CLUTCHES AND BRAKES ARE BETTER THAN ELECTRIC CLUTCHES AND BRAKES:

- 1. 30% FASTER RESPONSE TIME!**
- 2. 40% MORE DYNAMIC TORQUE!**
- 3. UP TO SIX TIMES LONGER FRICTION FACING LIFE!**
- 4. UP TO 60% LESS ENERGY CONSUMPTION!**
- 5. 30% MORE THERMAL HORSEPOWER!**
- 6. UP TO 10% SAVINGS IN UNIT COST!**
- 7. UP TO 80% SAVINGS IN REPAIR COSTS!**
