Technology Breakthrough!

"It's a technician's dream come true!" OMEGA's new, patented, "all-in-one" SUPERMETER® Model HMM290 combines the power of a True RMS full function Multimeter, Non-contact Infrared Pyrometer with laser sighting and a Dual input Type-K Thermocouple meter with a differential measurement feature into one power-packed handheld instrument. The Multimeter

measures...DC/AC Voltage, Current, Resistance, Frequency, Capacitance and features a built-in Logic & Diode tester. The Infrared Pyrometer offers adjustable emissivity, a wide temperature range, a 10:1 field of view and a laser sighting selector switch used to select between "a single laser dot" for hot spot locating and "a laser circle pattern" that outlines the optical field of view for average area measurement. The large backlit LCD

display features simultaneous readings in both digital and analog bargraph format with settings for Min/Max and Average readings. Each unit features Auto power-off, fused multimeter inputs, both battery or optional AC wall adapter operation and comes complete with safety test leads, dual type-K temperature probes, rubber protective boot, batteries, spare fuse, user's manual and is CE marked.

The FMA-1600 and FVL-1600 Series flowmeters use two of the best-studied physical properties of gases to measure flow: Pressure and viscosity. Differential pressure measurement, across a laminar region, to achieve a turndown of 100:1 typical. Gas units are available with very wide range of measurement, starting at 500 microliters per minute full scale to 1000 liters per minute full scale. Unique laminar flow elements, no moving parts and modern electronics provide an instrument that is rugged, affordable and accurate.

The FMA-1600 series "NON-THERMAL" Mass Flowmeters use discrete differential pressure, absolute pressure, and temperature sensor measurements within the laminar flow region. The embedded microprocessor provides a software-based STP calculation for the user, compensated for pressure and temperature to standard conditions (1 atmosphere 25° C). The FMA1600 series addresses the limitations of thermal mass flow technologies, as there is no "Hot wire" drift. The unit has an adjustable response time starting from 10 ms. The FVL-1600 series volumetric gas flowmeters are ideal for applications venting to atmosphere or with little to no back-pressure. These units use discrete differential Pressure sensor measurements within the laminar flow region with an embedded microprocessor to provide flow measurements with an adjustable response time starting from 10 ms.

The FMA-1600 and FVL-1600 series gas flow meters are based on the accurate measurement of volumetric flow. The volumetric flow rate is determined by creating a pressure drop across a unique internal restriction, known as a Laminar Flow Element

FMA-1611 shown larger than actual size

(LFE), and measuring differential pressure across it. The restriction is designed so that the gas molecules are forced to move in parallel paths along the entire length of the passage; hence Laminar (streamline) flow is established for the entire range of operation of the device. Because of the LFE's in the flow body, straight runs of pipe upstream

and downstream are generally not required. Unlike other flow measuring devices, in laminar flow meters the relationship between pressure drop and flow is linear. The underlying principle of operation of the flow meters is known as the Poiseuille Equation:
 $Q = (P_1 - P_2) \pi r^4 / 8 \eta L$ (Equation 1)

Where:

- Q = Volumetric Flow Rate
- P1 = Static pressure at the inlet
- P2 = Static pressure at the outlet
- r = Radius of the restriction
- h = (eta) absolute viscosity of the fluid
- L = Length of the restriction

Since p, r and L are constant;
Equation 1 can be rewritten as:
 $Q = K (\Delta P/h)$ (Equation 2)

Where K is a constant factor determined by the geometry of the restriction.
Equation 2 shows the linear relationship between volumetric flow rate (Q) differential pressure (DP) and absolute viscosity (h) in a simpler form.

All the flow meters are equipped with female NPT inlet and outlet port connections. They are position insensitive and may be mounted in any orientation that is convenient. The inlet and outlet ports are equal in size and symmetric (in-line). Normally speaking, the port sizes and dimensions for differing flow ranges are as follows:

General-Purpose Air Velocity Transducers

- ✓ 1.5% Accuracy
- ✓ Each Unit Individually Calibrated
- ✓ Durable Fast-Response Platinum Sensors
- ✓ Compact Solid-State Electronics
- ✓ Directly Monitors True Air Mass Velocity
- ✓ Linear 0-5 Vdc or 4-20 mA Output
- ✓ 400 msec Response Time
- ✓ Economical Insertion Design

The unique FMA-900 air velocity transducer utilizes both a velocity sensor and a temperature sensor to accurately measure air velocity (in SFPM, standard feet per minute). The built-in temperature sensor automatically corrects the flowrate for temperature variations. Both sensors are rugged glass-coated platinum resistance detectors (RTDs). The circuit heats the velocity sensor to a constant temperature differential above ambient temperature and measures the cooling effect of the air flow. This design provides excellent low velocity sensitivity and high accuracy. The FMA-900 also features negligible pressure drop.

To obtain mass flowrate in SCFM (standard cubic feet/minute), the SFPM velocity indicated by the FMA-900 is multiplied by the cross-sectional area of the pipe or duct in square feet. A traverse across the pipe or duct can be performed to determine the mounting location for average velocity indication. The FMA-900 can be mounted in pipes (down to 1" size) with the use of OMEGA® SSLK compression fittings (SSLK-14-14). fluoropolymer ferrules are required. (Model T-FER-14).

Each unit is individually calibrated in OMEGA's NIST-traceable wind tunnel.

Suggested power supply; FPW-15, (\$75).

- ✓ Compact Design
- ✓ Easy to Use
- ✓ Analog or Digital
- ✓ Low Cost

The economical and lightweight CDB-210 analog meter has proven to be highly accurate and dependable for a wide variety of applications. Spanning the entire measurement range of 0.2 to 20,000 mS (0.1 to 10,000 ppm) in five increments with automatic temperature compensation, readings are accurate $\pm 2\%$ of full scale. These models feature a long-life, replaceable probe and will operate for over 200 hours using the internal batteries. Model CDB-210 can also be line operated on 110/220 Vac (optional AC power pack).

The large 15 cm (6") analog displays can be seen in any light and at any distance. Process trends and changes are clearly shown. The dials can be marked with grease markers or tape to show range marks or limits. Analog displays give stable, instantaneous readings, no flipping of switching to obtain the correct reading.

Features normally found in large laboratory conductivity meters are condensed into the CDB-215 digital models. Accurate readings over the full 0.2 to 20,000 mS/cm range are displayed on a large, easy-to-read, 9 cm (3.5") digit LCD. Units have precision calibration capabilities, automatic temperature compensation and replaceable probes.

CDE680 Sensors**

- ✓ Two Analog Outputs
- ✓ Two or Four Alarm/Control Relays with Overfeed Timer
- ✓ Easy Calibration
- ✓ Simple Function Menu Operation
- ✓ ½ or ¼ DIN Models
- ✓ CDCN680 Features Ultrapure Water Capabilities
- ✓ Display in English, French, German or Spanish
- ✓ Dual Input (CDCN680 Only)

CDCN680 series conductivity analyzers are designed for use with CDE680 conductivity sensors in applications of pure water up to 200 mS. The two sensor inputs can be independently configured to measure conductivity, resistivity, total dissolved solids or to make a two-sensor calculation such as % rejection, % passage, difference or ratio.

CDCN670 series analyzers are designed for use with CDE3600

series electrodeless conductivity sensors for applications from 200 μ S to 2000 mS, particularly where coating and polarization can cause problems with other types of electrodes. The sensor input can be configured to measure conductivity, % concentration or total dissolved solids.

Both the CDCN670 and CDCN680 Series are available in either ¼ or ½ DIN versions. All models have either two or four relay outputs and two analog outputs. The ½ DIN models feature a large LCD display and hardware for wall, pipe or panel mounting.

Cell constant chart for CDE680 Series electrodes for use with CDCN680 Series analyzers

Sensor Cell Constants and Measuring Ranges

| Sensor Cell Constant | Inherent Measuring Range | |
|----------------------|--------------------------|-----------------------|
| | Conductivity (µS/cm) | Resistivity (MΩ • cm) |
| 0.05 | 0 to 100 | 0.002 to 20 |
| 0.5 | 0 to 1000 | 0.001 to 20 |
| 1 | 0 to 2000 | not applicable |
| 5 | 0 to 10,000 | not applicable |
| 10 | 0 to 200,000 | not applicable |

TDS Ranges: To determine which cell constant to use, convert the full-scale TDS value to its equivalent conductivity value at 25°C (77°F). Do this by multiplying the TDS value by 2. Then choose the cell constant for that calculated value.

Sanitary Sensor

- ✓ Wide Measuring Range
- ✓ Non-Conductive Chemically Resistive Wetted Materials
- ✓ Low Maintenance
- ✓ Convertible Sensor for Submersion or Mounting in 2-Inch Tee
- ✓ Sanitary Models Available

Specifications

Wetted Materials: Polypropylene, PVDF, or PFA

Operating Temperature Range: -10 to 125°C (14 to 257°F)

Maximum Flow Rate: 3 m (10 ft) per second

Measuring Range: From 0 to 200 microSiemens/cm up to 0 to 2,000,000 microSiemens/cm

Temperature Compensator: Pt 1000 RTD

Sensor Cable: 5-conductor (plus two isolated shields) cable with XLPE (cross-linked polyethylene) jacket; rated to 150°C (302°F); 6 m (20 ft.) long

Pressure/Temperature Limits (Sensor Only, Hardware Not Included):

| | |
|---------------|--------------------------------------|
| Polypropylene | 100 psi at 212°F (6.9 bar at 100°C) |
| PVDF | 100 psi at 248°F (6.9 bar at 120°C) |
| PFA | 200 psi at 302°F (13.8 bar at 150°C) |

Chemical resistance problems are simplified because only one wetted material contacts the process media. Furthermore, the wetted material is non-conductive, to electrically isolate the sensor from the process fluid, eliminating ground loops that can affect measurement accuracy. The electrodeless sensor design eliminates polarization and electrode coating problems that commonly affect conventional contacting electrode-type conductivity sensors.

The CDCN-91 series dual channel conductivity/resistivity controller is a two-channel input device equipped with three scalable 4 to 20 mA outputs and four programmable relays. A selector switch activates two open collector outputs in place of two of the relays for extraordinary output versatility. Dual input and advanced control capability, including percent rejection, difference and ratio calculations, together with the CDCE-91 series conductivity sensors listed below, form the perfect measurement and control system for water treatment applications and more. Two versions are available: one accepts AC line-voltage, the other low voltage DC for power. The four-button keypad arrangement with intuitive software design is user-friendly, and the NEMA-4X/IP65 integrity of the front panel can be extended to the entire enclosure by using the optional rear cover kit.

Installation

The transmitter is available in a panel mount or a field version. Select the universal mount kit FP90UM to mount the transmitter on a surface near the sensor.

1. Panel Mount

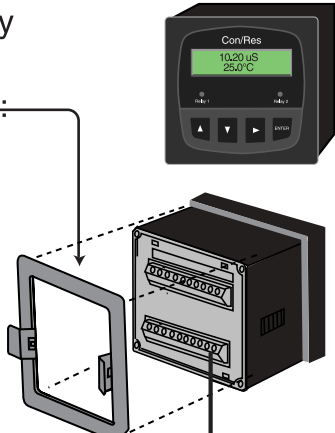

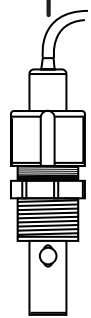

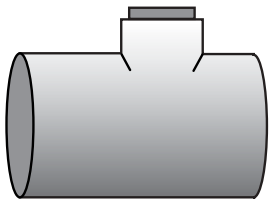

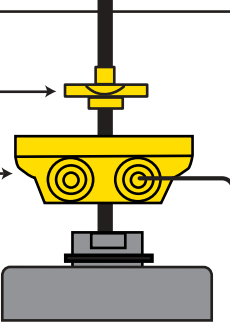

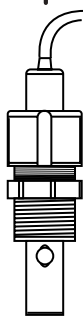

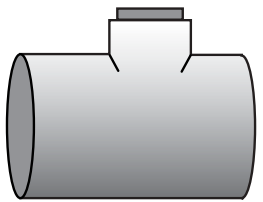

All Panel mount transmitters CDTX-90-XP include a mounting bracket and gasket for a NEMA-4X watertight panel installation. Panel mount transmitters fit into a standard 1/4 DIN panel cutout.

2. Universal Mount

The Universal Mount Kit FP90UM can be ordered separately and includes a conduit base, locking ring, and universal adapter for mounting the transmitter on a pipe, wall, or other stationary surface.

CDTX680 Series transmitters accept the input from a CDE680 Series conductivity sensor with an 0.05, 0.5 or 10.0 cell constant. It can be used for ranges from 10 to 20,000 μ S.

CDTX-102A Series transmitters accept the input from a CDE3600 Series electrodeless sensor. Range is 500 to 500,000 μ S.

The output provided is an isolated 4 to 20 mA dc. The units are ordered with specified ranges, but can easily be rescaled in the field.

Dissolved Oxygen Analyzers

Model DOCN-72
\$1220

Optional

- ✓ Large Display
- ✓ Replaceable Membrane Cartridge
- ✓ Rugged Foul-Resistant Membrane
- ✓ Seven Calibration Methods
- ✓ Dual Analog Output
- ✓ Three Relays for Alarm or Control
- ✓ Advanced Diagnostics

The DOCN-72 is an easy-to-use dissolved oxygen analyzer/controller designed for use with the DOE-72 submersible mounted membrane dissolved oxygen sensor.

The sensor features a replaceable cartridge, simplifying the task of installing a new membrane.

Besides viewing measured dissolved oxygen in ppm or % saturation, you can display other important system information (analog

output values, process temperature, next scheduled date of calibration, etc.) by using the \bar{n} or \bar{o} key to scroll the lower line on the measurement screen. The analyzer provides two sets of analog outputs, each consisting of one 4 to 20 mA and one 0 to 5 Vdc/0 to 1 mA output. Each output set can be assigned to represent the measured D.O. (in ppm or % saturation) or temperature. Also, whenever the analyzer detects that one of the 4 to 20 mA loops is open, it displays a "Current Load High" diagnostic message.

The analyzer logbook records up to 100 system events, including calibrations, warning and failure messages, power-up/power-down, and configuration activity. Each event is logged with the date and time of occurrence.

Specifications

Range: 0.00 to 40.00 ppm or 0.0 to 200% saturation 0 to 50°C (32 to 122°F)
Display: Graphic dot matrix LCD, 128 x 64 pixels with LED backlighting; 13 mm (1/2") main display character height; 3 mm (1/8") auxiliary information character height
Ambient Conditions: -30 to 60°C (-22 to 140°F); 0 to 95% relative humidity, non-condensing
Relays:
Types/Outputs:
Standard: Three electromechanical relays (two SPDT and one SPST); UL rated 5 A 115/230 Vac, 5 A @ 30 Vdc resistive
Functional Modes: Each relay (A, B and C) can be assigned to be driven by the measured D.O. (in ppm or % saturation) or temperature

DISSOLVED OXYGEN

Operating Modes:

Control: Settings for failsafe on/off, high/low phasing, setpoint, deadband, on delay, and off delay
Alarm: Settings for failsafe on/off, high alarm point, high alarm point deadband, low alarm point, low alarm point deadband, on delay, and off delay

Outputs:

Analog: Two separate outputs each. Isolated 0 to 5 Vdc (1 megohm min. load) and isolated 4 to 20 mA (900 ohms max. load). Selectable and scalable for D.O. and/or temperature

Temperature Compensation:

Automatic, 0 to 50°C (32 to 122°F)

Sensor-to-Analyzer Distance:

305 m (1000') maximum

Power Requirements: 105 to 250 Vac, 50/60 Hz. (20 Va max.)

D.O. Calibration Methods: Seven methods using sample or water and using either known or saturated values or air

Logbook: Up to 100 system events can be stored

Analyzer Performance

(Electrical, Analog Outputs)

Accuracy: 0.10% of span

Sensitivity: 0.05% of span

Stability: 0.05% of span per 24 hours, non-cumulative

Non-linearity: 0.10% of span

Repeatability: 0.05% of span or better

Temperature Drift: Zero: 0.02% of span per °C; Span: 0.02% of span per °C

Enclosure: NEMA-4X; polycarbonate face panel, epoxy-coated high-quality cast aluminum door and case with four 13 mm (½") conduit holes, nylon mounting bracket, and stainless steel hardware

Mounting Configurations: Panel, surface, and pipe (horizontal and vertical) mounting

Compact Dissolved Oxygen Benchtops

- ✓ Compact Design
- ✓ Easy to Use
- ✓ Analog or Digital
- ✓ Low Cost

Whether monitoring a food process, a lake's oxygen level, a fish tank, or the BOD of drinking water, OMEGA has a dissolved oxygen meter which will fit your application. All OMEGA dissolved oxygen meters combine accuracy with simplicity of operation and portability. All models feature a rugged, reliable, fast-response, and easy-to-maintain, replaceable, polarographic oxygen probe which fits standard BOD bottles.

The DOB-210 analog meters display results between 0-120% saturation and 0-15 ppm (simultaneously) with accuracies of ±2% saturation and ±0.2 ppm, respectively. Temperature reading (switch to "Temp." to display the sample temperature) is standard on all OMEGA oxygen meters.

Similar in function and utility to the analog units, the DOB-210 digital dissolved oxygen meter features easy-to-read 3.5 digit LCD displays. Results are displayed over the 0 to 20 ppm range with ±0.1 ppm accuracy, and a sample temperature readout (0 to 50°C) mode.

DISSOLVED OXYGEN

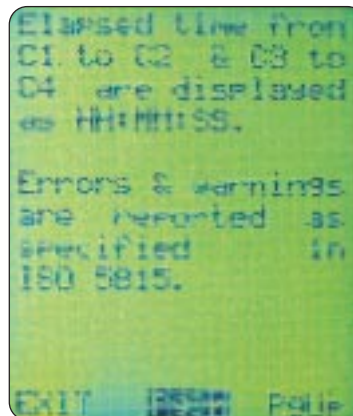

The DOB-930 benchtop dissolved oxygen meter uses a Clark-type polarographic electrode, optimized for both stability and speed of response. Dissolved oxygen levels can be measured either as % saturation or as concentration in mg/l (ppm). The meter also has a mode dedicated to the determination of B.O.D. (Biochemical Oxygen Demand).

The graphics mode liquid crystal display facilitates plain-language, menu-based operating procedures and clear presentation results. The results phase permits the simultaneous display of dissolved oxygen level and temperature.

The sensor measures the partial pressure of oxygen, with the reported results influenced by atmospheric pressure. The DOB-930 allows atmospheric pressure and salinity values to be entered through the menu options for automatic correction.

A real-time clock is built into the meter and displays either day, month and year or seconds, minutes and hours. The clock feature also enables calibration checks to be prompted at intervals determined by the operator.

The unit includes a 100-location memory for logging the results for subsequent recall to the display or downloading via the bi-directional RS-232 link to a printer or PC.

Sensor Features

The sensor housings are constructed of PEEK, a high performance thermoplastic that provides outstanding mechanical strength and chemical resistance. Multiple sealing materials are used to preserve sensor integrity over a wide range of applications.

The four electrodes used in the cell are made of titanium for greater chemical resistance. Two of these electrodes are used to establish the sensor drive potential. The other two electrodes sense the flow of current between the drive electrodes and maintain the proper drive potential. The current that flows between the two drive electrodes is directly proportional to solution conductivity.

With conventional two-electrode sensors, as the process solution begins to coat the electrode surfaces, the sensor output signal begins to decrease. This produces an artificially low conductivity measurement.

The CDTX-45 four-electrode system uses electrode diagnostics to compensate for the effects of fouling. As the two drive electrodes become coated by the process solution, a feedback mechanism involving the two sensing electrodes detects the decrease in drive potential and automatically re-establishes the proper drive potential. When the degree of coating reaches a limit where compensation is no longer possible, the diagnostic actuates an alarm to signal that the sensor requires cleaning.

The unique drive/control scheme of this system allows a single sensor configuration to be used reliably over a wide conductivity range. This system eliminates the requirement for multiple sensors with varying cell constants that are restricted to narrow operating ranges.

Transmitter Features

The microprocessor-based transmitter is loop-powered and fully isolated for high service reliability. The transmitter includes devices to protect the system from power surge and brownout events.

Sensor Features

The sensor housings are constructed of PEEK, a high performance thermoplastic that provides outstanding mechanical strength and chemical resistance. Multiple sealing materials are used to preserve sensor integrity over a wide range of applications.

The 3-electrode amperometric sensor produces a current output that is proportional to the partial pressure of oxygen. The semi-permeable sensor membrane consists of a 50-micron thick layer of FEP (fluorinated ethylene propylene). The hydrophobic nature of this material provides a fouling-resistant surface area for the diffusion of oxygen into the reaction cell. The three-electrode reaction cell includes a gold cathode, silver anode, and a silver/silver bromide reference electrode. The reference electrode is used to stabilize the polarization potential, which ensures accurate concentration measurement. The entire reaction cell is housed in a replaceable PEEK cartridge, which makes sensor regeneration fast and simple.

An integral preamplifier is encapsulated in the body of the sensor. This creates a low impedance signal output which ensures stable readings in harsh environments, and maximizes the distance between sensor and transmitter. A large stainless steel diagnostic electrode monitors the integrity of the cartridge membrane. Other sensor diagnostics monitor the condition of the cartridge electrolyte, loss of sensor seal integrity, and integral temperature sensor failure.

The microprocessor-based transmitter is loop-powered and fully isolated for high service reliability. The transmitter includes devices to protect the system from power surge and brownout events.

LIGHTSPEED™ Fiber Optic Paddlewheel Flow Sensors – Inherently Safe Design

FP9000 Series

\$225

- ✓ Unique Fiber-Optic Design for Hazardous Areas
- ✓ Fiber-Optic Signal – Insensitive to Electrical Interference
- ✓ Non-Magnetic Design Resists Fouling from Rust
- ✓ Optical Interface

FP9000 Series LIGHTSPEED™ paddlewheel flow sensors are ideal for applications with low viscosity solutions (like water) which are low in suspended solids.

A patented fiber-optic sensing mechanism makes these sensors especially well suited for applications in hazardous environments, where the paddlewheel electronics can be mounted in a non-hazardous location and the near-infrared light signal can be sent down an optic cable to the paddlewheel inside the hazardous location. This non-magnetic design tolerates some rust, often found in iron pipes. FP9000 Series flow sensors must be used with the companion FP9000 Series pipe installation fittings.

The high amplitude pulse output from the FP9P opto-electronic interface is ideally suited for hook up to the model INF7 ratemeter/totalizer. For 4-20 mA output, connect to OMEGA's FLSC90 Series signal conditioner. (Please specify fitting and calibration range for the 4-20 mA output.) The FLSC90 includes the required optical interface for the FP9000 sensor.

OMEGA's Model FLSC90-A fiber-optic signal conditioner has been designed to interface directly with OMEGA's FP-9000 and FP-9000A series LIGHTSPEED™ paddlewheel flow sensors. The FLSC90-A provides a high intensity light source to the patented paddlewheel sensor through a semi-flexible duplex fiber-optic cable. Returning light pulses are measured and converted by the signal conditioner's electronics to a scalable analog output that is proportional to the flowrate. The ability of the paddlewheel flow sensor to operate in harsh and heavy electrical noise environments via the fiber optic cable link makes this system ideal for such applications. The industry standard 4-20 mA or 1-5 Vdc analog output can connect directly to many of OMEGA's process meters, controllers, dataloggers or data acquisition systems.

Specifications

Accuracy: ±0.15% of full scale

Repeatability: ±0.025

Input: Light pulses from fiber optic flow sensor (FP-9000 Series) See Note*

Min. Input Frequency: 65 Hz

Max. Input Frequency: 960 Hz

Ambient Operating Range:

0 to 49°C (32 to 120°F)

Power: 8-32 Vdc @ 40 mA

Outputs (3-Wire Configuration):

4-20 mA/1-5 Vdc (Field Selectable)

Maximum Loop Resistance:

(Vsupply-8V)/.020 A = Ohms

Dimensions: 114.5 L x 63.5 W x 35 mm H (4.51 x 2.50 x 1.38")

Storage Temperature:

-20 to 65°C (-4 to 149°F)

Enclosure/Class:

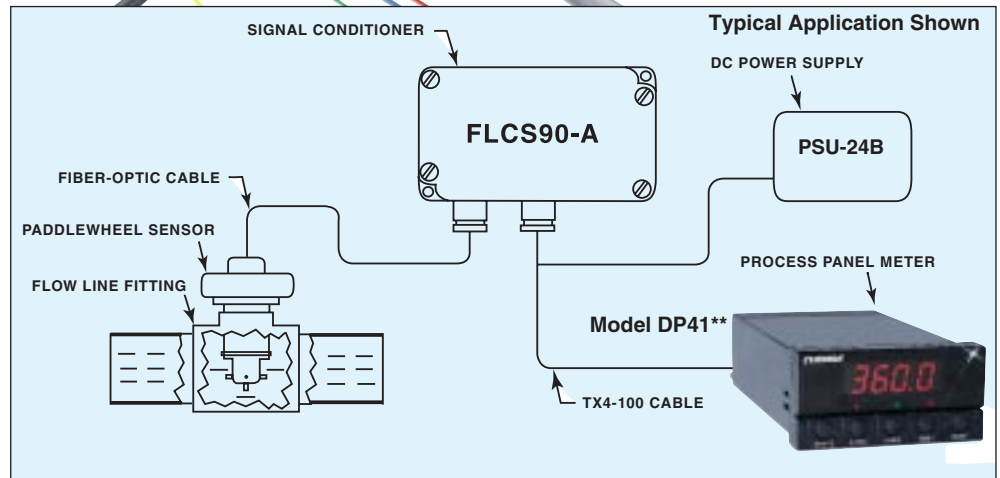

Die cast aluminum, NEMA-4

CE Approved: Yes

Weight: 238 g (8.3 oz)

Paddlewheel Flow Sensor/Transmitter System

- ✓ Wide Chemical Compatibility
- ✓ 4-20 mA or 1-5 Vdc Field Selectable Output
- ✓ NEMA-4 Housing
- ✓ Compact Industrial Design Includes Both Paddlewheel Sensor and Process Transmitter in One Assembly

OMEGA's new FP7000 Series Paddlewheel sensor/transmitter flow system provides a low cost, factory calibrated, simple, and easy to install solution for applications requiring a remote long distance flow sensor located away from the main indicating meter or control instrumentation. When ordered with an OMEGA® installation fitting, the sensor/transmitter is factory calibrated to match the flow rate of the fitting selected. Example: if you ordered a FP7002 sensor/transmitter with a FP7010 PVC fitting, the analog output of the transmitter will be factory calibrated to give 20ma output at the max flow rate of LPM (50 GPM) and 4ma out at the min flow rate of LPM (3 GPM). The analog output can be converted to 1-5 Vdc output in the field without recalibrating the system.

Preliminary Specifications

- Accuracy:** ±2% of full scale
Repeatability: ±1% of full scale
Power: 12 to 28 Vdc @ 50 mA maximum
FP7002 Wetted Materials:

O-Ring: Viton®
Paddle: PVDF
Locking Nut: PVC
FP7002A Wetted Materials:
Sensor Body: Polypropylene
O-Ring: Viton®
Paddle: PVDF
Locking Nut: Brass

Fluid Temperature/Pressure Range:

Do not exceed maximum ratings of your piping. Depending on the material of the fitting, the operating temperature/ pressure may be limited by your piping and not by the sensor. For all PVC tee fittings, do not exceed 150 psig @ 27°C (80°F), 100 psig @ 38°C (100°F), 60 psig @ 49°C (120°F) or 30 psig @ 60°C (140°F), due to the insert in the tee. FP7000 sensor: 0-26°C (32 to 80°F) up to 150 psig; max. pressure decreases 1.1 psig per each 0.56°C (1°F) above 27°C (80°F) for a max. temperature of 93°C (200°F) at 18 psig max.

Weight:

- FP7002:** 0.75 lb (0.3 kg)
FP7002A: 1 lb (0.4 kg)

HHM110 Series Test Meters—Versatility in the Palm of Your Hand!

OMEGAETTE™ — Moderately Priced Instruments. Ideal for Education, Training and Demonstration Programs.

HHM110
\$66
Pen Type
Multimeter

For accurate measurement in a compact design, the HHM110 Series is a low-cost solution to your test and measurement needs. Model HHM110, the stand-alone DMM, is a full function, digital multimeter that fits neatly into your pocket. You may add HHM110-TC, a thermocouple module, that will

convert any DMM into a thermometer. The HHM110-RH module converts any DMM into a relative humidity meter, and the HHM110-CP converts any DMM into an AC clamp meter. Versatility in the palm of your hand! (Note: All modules will work with any standard DMM).

Basic Unit

- ✓ Permanent and Resettable Totalizers
- ✓ Scalable Outputs
- ✓ Relay Options
- ✓ Mounting Versatility
- ✓ Simulate Function
- ✓ 2 x 16 Character Dot Matrix LCD
- ✓ Chemical Resistant Enclosure and Self-Healing Window
- ✓ Large Pushbuttons
- ✓ Clearly Marked Terminal Labels

Application

- ✓ Flow Control and Monitoring
- ✓ Filtration or Softener Regeneration
- ✓ Effluent Totalization
- ✓ Pump Protection
- ✓ Feed Pump Pulsing
- ✓ Ratio Control
- ✓ Water Distribution
- ✓ Leak Detection

The FP90 Series Flow Transmitter is an advanced solution that converts the signal from many flow sensors into a 4 to 20 mA signal for long distance transmission. Configuration flexibility is maximized with two optional relays for process control, two packaging options for integral/pipe mount or panel installation, and scalability for virtually any flow range or engineering unit. State-of-the-art electronic design ensures long-term reliability, signal stability, and simple user setup and operation. The FP90 can be integrally mounted to FP8500 series paddlewheel sensors utilizing an mounting kit. The FP90 can be remotely used with the OMEGA® FP-5100, FP-5200, FP-5300, FP-5060, FP-2541, FP-5600, FP-3-1500 or FP-6000 flow sensors and a FP90UM mounting kit. The FP90-XP units are designed to be panel mounted. The three front keys control all programming and scaling of the FP90-there are not pots to tweak or internal adjustments to make. Simply enter the K-factor and the FP90 displays rate with field-adjustable decimal point, mA output value, total (field selectable for resettable

FP90 Flow Transmitter, actual size

or non-resettable operation) and the date of the last reprogramming. The 8-digit alphanumeric LCD shows every program step in clear language, allowing display in any engineering units and timebase in seconds, minutes, hours or days. A special pushbutton sequence permits entry into the programming, thus providing security against unauthorized reprogramming.

Precision Micro-Ohmmeter

- ✓ Measurement On Site
- ✓ Easy to Use
- ✓ High Resolution: 10 $\mu\Omega$
- ✓ Resistance and Voltage Measurements
- ✓ Temperature Compensation and Measurement

The HHM518 micro-ohmmeter is used for four-wire resistance measurement from low values (resolution 10 $\mu\Omega$) up to 50 k Ω , with an excellent accuracy. It includes thermal emf compensation and temperature compensation. It can also measure dc and ac voltages and ambient temperature. The HHM518 has a compact, rugged, heavy duty housing with input protected up to 250 V. It is battery powered for use on site. Fitted with a removable stand and powered by an external ac charger, it can also be used on the bench.

Applications

On-site, in workshop or laboratory, the main applications are listed below:

- ✓ Cable Resistance and Resistivity Measurements
- ✓ Inductive Resistance Measurements (Motors, Transformers)
- ✓ Contact Resistance Measurements (Connectors, Switches, Relays, Quality of Joints)
- ✓ Metallization and Earth Bonding Measurements
- ✓ Testing and Measurement of Electrical Components: Resistors, Fuses, Thermistors, Heating Elements, PCB Trade
- ✓ Surface State, Resistance of Mechanical Bonds and Materials Testing

Specifications

Display of measurement values (with units) and ambient temperature. Indication of measurement range, type of current, possible temperature compensation. 50,000 counts (4½ digits) LCD. 13 mm high (0.5")

Range, current waveform, temperature compensation and trigger selected by keyboard

Four-Wire Measurements with automatic compensation for thermal electromotive forces (emfs) and automatic ambient temperature compensation

Measurement Current: User can choose two waveforms for current: continuous (dc) for inductive resistance measurements (permanent current); or pulsed in other cases: current shutoff between measurements (advantage: low self-heating of resistance in test and low power consumption)
Measurement Time: 0.5 s (dc), 1 s (pulsed)
Input Voltage Protection: 250 V (430 V for voltage measurement). Electrical protection against breakoff currents when measuring inductive resistance
Calibration: No need to open the instrument for recalibration; just connect a standard resistance and enter its value through the keypad
Operating Conditions:
Nominal Operating Temperature and Humidity: 0 to 50°C, 20 to 75% RH
Maximum Operating Temperature and Humidity: -10 to 55°C, 10 to 80% RH
Maximum Storage and Transport Temperature: -30 to 60°C
 Protection according to IP41
Power Supply:
 Internal Battery pack Ni-Cd: 1.7 AH
 Battery life (typical use) >10 h
 External ac charger provided allows either battery charging or permanent use on ac power, 100-240 Vac, 50/60 Hz
Connections: Sockets for 4 mm test plugs
Housing: Rugged ABS case for site or bench use
Dimensions: 120 x 65 x 245 mm (4.7 x 2.6 x 9.6")
Weight: 1.1kg (2.4 lb)

Resistance Measurement
 From very low values (resolution 10 μΩ) up to 50 kΩ with: Measurement and automatic compensation for thermal electromotive forces (emfs); Measurement and compensation (user choice) of ambient temperature. With temperature compensation, the HHM518 displays the theoretical value at 20°C of a copper or aluminum resistance (other metals on request). Ambient temperature is measured with a sensor built in to the instrument and displayed.
Kelvin Test Lead Set HHM518-TL1
 A pair of security measurement leads, each with a Kelvin clip, 1.20m of wire and two 4 mm plugs. The Kelvin clip

can be used for four-wire measurement because there is a perfect galvanic isolation between the current input and the voltage connector. Gold-plated contacts.
Maximum opening: 1.2 cm
Maximum current: 10 A
Kelvin Test Probe HHM518-TL2:
 One measurement lead with a dual probe (concentric).
 Length of rod: 8 mm.
 Diameter of rod: 8 mm
 Length of wire: 3 m
 Equipped of two 4 mm security banana plugs
 Maximum current: 10 A

Features

- ✓ Patented Grounded Heating Element
- ✓ Uniform Heat Distribution
- ✓ Operating Temperatures Up to 200°C (392°F)
- ✓ Built-In Insulation
- ✓ Modular Design to Fit Custom Lines
- ✓ Power/Jumper Leads Allow Jackets to be Interconnected in the Field
- ✓ No Waiting for Custom Measurements or Engineering
- ✓ CE-Pending
- ✓ UR-Pending

Benefits

- ✓ Grounding Improves Safety
- ✓ Clean Room Compatible
- ✓ No Need to Apply Insulation
- ✓ Reduced Particle Buildup
- ✓ Reduced Down Time
- ✓ Greater Yields
- ✓ Ease of Installation
- ✓ Easily Removed and Reinstalled

OMEGA® Silicone Rubber Tubing Heaters provide the heat and insulation necessary to reduce the deposits made from gas delivery lines such as BCL3, WF6, and other gases. Reduced deposits means reduced downtime, increased throughput, improved efficiency and greater process yields. OMEGA's Silicone Rubber Tubing Heaters simplify installation and eliminate the need to wait for custom engineered heaters or jackets.

High Temperature Relative Humidity/ Temperature Transmitters

HX15A Series
\$495
Basic Unit

HX15-W Shown Smaller Than Actual Size

- ✓ -40 to 180°C (-40 to 356°F) Operating Range
- ✓ Remote Stainless Steel Probe (included)
- ✓ 4-20 mA or 0-1 Vdc Output
- ✓ 64 mm (2.5") Long Wall Mounted Probe
- ✓ 216 mm (8.5") Long Duct Mounted Probe
- ✓ 2.5% RH, 0.6°C Accuracy

Preliminary Specifications

Relative Humidity: ±2.5% RH from 20 to 80%RH; ±3.1% RH below 20 and above 80% RH @ 25°C with tempcoefficient of -0.06RH/°F

Temperature: ±0.6°C(1°F), 40 to 180°C (-40 to 356°F). Time constant 4 sec., 60% response, 1 m/sec moving air

Sensors: RH Thin polymer capacitor, TEMP. 100Ω platinum RTD.

Power: 7 to 30 Vdc

Outputs: 4 to 20 mA for 0 to 100% RH or 0-1 Vdc over -40 to 180°C (-40 to 356°F) Temperature range

Operating Range: Electronics ABS enclosure NEMA 4X, -20 to 70°C (-4 to 158°F).

Probes: -40 to 180°C (-40 to 356°F).

Dimensions:

Electronics: 79.8 x 81.8 x 54.9 mm (3.14" x 3.22" x 2.16"). Teflon® cable, Metal wall mounting clip.

Duct probe: 216 x 16 mm (8.5 x 0.625"D), 1 m (40") Teflon® cable.

Removable and adjustable duct flange.

Teflon® is a registered trademark of DuPont.

The HX15A series two wire remote transmitters measure relative humidity and temperature over a large temperature range (-40 to 180°C). The HX15A-W 64 mm (2.5") stainless steel probe is used for wall mounting. The HX15A-D 216 mm (8.5") stainless steel duct probe has a removable flange. The probes are connected to housings with 1 m (40") Teflon® cables. Custom length cables available on special order. Probes are not field replaceable.

Relative Humidity/ Temperature Transmitter Wall, Duct Mount and Remote Probe Models

Model HX93A
\$225

- ✓ 4-20mA or 0-1V Output
- ✓ RH and Temperature Output
- ✓ Compact Size for Mounting Versatility
- ✓ Watertight Enclosure
- ✓ Accurate to 2.5% RH and 0.6°C

The HX93A transmitter provides remote or on-site monitoring of relative humidity and temperature. The HX93A outputs a linearized current or voltage signal proportional to the measured humidity or temperature. RH outputs are temperature compensated. Current output models enable placing of the transmitter at a remote location virtually any distance away from the readout or datalogging device. HX93A utilizes a thin-film polymer capacitor to sense relative humidity, and a Platinum 100Ω RTD to accurately sense temperature. A stainless steel mesh type filter protects the sensors, which is easily removable for cleaning. Mounting screws are easily accessible inside the rugged, ABS enclosure, which houses and protects the electronics to NEMA 13 specifications. An unregulated power supply providing a voltage of 6-30V powers the HX93A.

- ✓ Accurate to 2.5% RH

The model HX92A is an economical humidity transmitter, providing on-site continuous monitoring of relative humidity. It is a 2-wire transmitter with either voltage or current output. The transmitter output is linearized, and RH readings are temperature compensated. A thin-film polymer capacitor senses relative humidity. The sensor is protected by a stainless mesh-type filter that is easily removable for cleaning. The case and weathertight protection, and screws are provided for mounting the unit via internal hole. An unusually low minimum voltage of 6 V allows the use of large impedances for longer wire runs. The HX93A is a similar unit that provides transmitter outputs for both humidity and temperature.

Relative Humidity Controller

RHCN-3A
\$290

- ✓ **Stainless Steel Miniature RH Probe May Be Remotely Mounted Thousands Of Feet from Controller**
- ✓ **Setpoint/Bandwidth Control**
- ✓ **10 mV/%RH or 50 mV/%RH Recorder Output**
- ✓ **OEM Markets**

OMEGA's RHCN-3A is an economical relative humidity controller. The probe uses a thin film polymer capacitive sensor which may be mounted thousands of feet from the controller box. The RHCN-3A has a standard 10 mV/%RH or 50 mV/%RH (internally selectable) recorder output, and a 5 amp SPDT relay for control. The controller is suitable in such applications as baking and food processing, HVAC, computer rooms, art galleries, drug manufacturing, and many others.

Specifications

Accuracy: ±3% RH from 3% to 95% RH at 25°C

Operating Temperature Range: -20 to 85°C (4 to 185°F)

Control Output: SPDT relay form "C"; rated 5 amps, 250 Vac, 30 Vdc

Recorder Output: 10 mV/%RH or 50 mV/%RH, internally set

Bandwidth Control: Non-interacting, 0 to ±20% RH

Power: 8.0 Vdc to 30 Vdc, 125 milliamps maximum

Mechanical

Probe: Stainless steel, 19 mm dia. (.75"), 119 mm long (4.7"), 1.5 m (5'), 2-wire cable, bracket for wall mounting

Controller: Housed in standard "T" box 114 x 70 x 51 mm deep (4½" x 2¾" x 2") screw terminal connections

Top of the Product Line

With a combination of powerful features, the new portable and rugged OS530 Series infrared thermometers offer solutions for many non-contact temperature measurement applications. Emissivity adjustable in 0.01 increments, the OS530 series provides versatility when measuring a variety of surfaces.

A custom backlit LCD display provides dual digital display of both current and max, min, diff or average temperatures simultaneously. This provides the user with more information at a glance. Built-in laser sighting creates a 12-point circle which clearly indicates the target area being measured. The OS530 also features a high alarm setpoint, providing both audible and visual indication of the alarm status. The standard 1 mV per degree analog output allows interfacing with data acquisition equipment, including chart recorders, dataloggers and computers.

Using the Chart cursor feature to measure charted temperature

MINIMUM SYSTEM REQUIREMENTS:

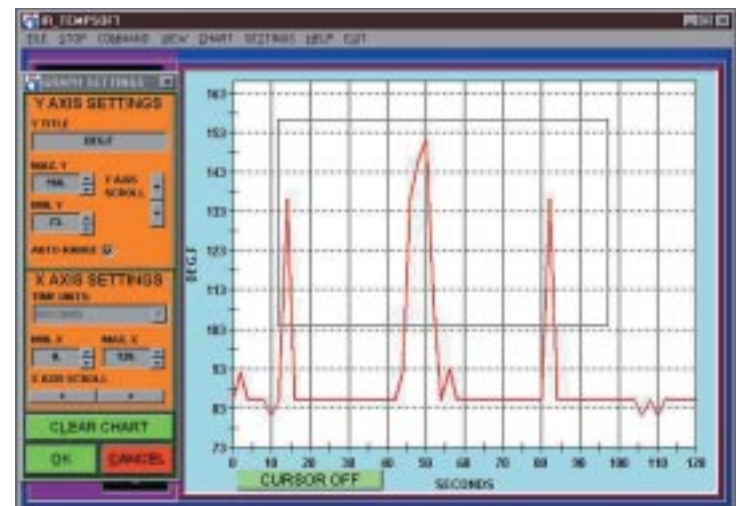

- PC with Pentium Class Processor (Any speed)
- Mouse or similar pointing device
- Microsoft Windows 95, 98, NT 4.0 or greater
- 32 MB of RAM
- 14 MB of hard drive space
- VGA display adapter (Super VGA recommended)
- CD-ROM Drive
- RS-232 Communications Port
- HTML viewer or Microsoft Word to view help documentation

Charting real-time temperature data with the moveable Temperature Bar Graph enabled

Viewing the downloaded stored temperature data points.

Using the Chart Zoom feature to zero in on area of interest

IR-Tempssoft makes your Temperature Data Logging applications easy with its user-friendly Microsoft Windows interface. With its advanced chart operations, easy data file storage/retrieval, easy connection to above stated IR devices, and online help manual, you can use IR Tempssoft to quickly start your temperature measurement applications.

OMEGA's new OS550 Series industrial, high performance, economical thermometer/transmitter offers a wide choice of temperature ranges, optical patterns or fields of view and three outputs (1 mV/ degree, 4-20 mA, and 0-5 Vdc) to feed directly into panel meters, recorders, temperature/process controllers, dataloggers, data acquisition systems or other process instrumentation.

Since the OS550 Series infrared thermometers do not use chopper motors or vibrator mechanisms, they can be mounted in any position and in hostile environments without suffering any loss in performance.

This rugged design coupled with their relatively small dimensions make these sensors ideally suited for a wide variety of applications.

Specifications

Accuracy: $\pm 1\%$ of reading or 3°F @ 25°C ambient , whichever is greater
Repeatability: $\pm 1\%$ rdg ± 1 digit
Spectral Response: 8-14 microns
Emissivity Range: 0.10 to 0.99
Field of View (FOV): See Diagrams
Display: Backlit LCD
Transmitter Outputs: 1 mV/degree, 0 to 5 Vdc, or 4 to 20 mA
Power: 7 to 24 Vdc @ 80 mA
Environmental Ratings: NEMA-4 water tight and dust tight for electronics enclosure
Ambient Operating Range: sensing head -18 to 85°C (0 to 185°F) with OS550-WC; 0 to 50°C (32 to 122°F) without OS550-WC
 Electronics, 0 to 50°C (32 to 122°F)

Response Time:

- ✓ Type K Thermocouple, 0 to 5 Vdc, 4 to 20 mA or 1 mV/Deg. Analog Output Models
- ✓ Rugged, Miniature Industrial Design with Remote Sensor Head
- ✓ User Adjustable High or Low Alarm Standard
- ✓ NEMA-4 Metal Housing

OMEGA's new low cost OS100 Series mini infrared transmitter system features a remotely mounted infrared temperature sensor and high performance microprocessor based signal conditioner. The OS100's miniature sensor head design is ideal for measuring temperature in confined, hard-to-reach places and harsh environments. The sensor head is connected to the main electronics housing via a 1.8 m (6') shielded cable standard on all models. The signal conditioners main electronics are mounted in a rugged NEMA-4 rated diecast aluminum housing and feature adjustable emissivity, linear voltage, current or type K thermocouple output calibrated for the temperature range of -18 to 538°C (0 to 1000°F). A user adjustable high/low alarm output is standard on all models.

Miniature Blackbody Calibration Source; Portable Design and High Temperature Range

Model BB703
\$890
Basic Unit

- ✓ Calibrates from Ambient +10 to 400°C (Ambient +20 to 752°F)
- ✓ Portable Miniature Design
- ✓ Built-in Digital 1/2 DIN Temperature Controller
- ✓ Calibrates Infrared Instruments Quickly and Accurately
- ✓ NIST-Traceable Calibration Certificate with 3 Data Points Included

Shown slightly smaller than actual size

The BB703 is a high performance, rugged, miniature blackbody calibrator. It is used for infrared pyrometer calibrations with a temperature range of ambient +10 to 400°C (ambient +20 to 752°F). With its unique miniature design and built-in 29 mm (1.125") target plate, the BB703 is an ideal and economical infrared calibrator for any laboratory or field service application.

Specifications

Temperature Range:

Ambient +10 to 400°C
(Ambient +20 to 752°F)

Accuracy: ±1.4°C (±2.5°F)

Resolution: 0.1°

Stability: 0.3°C (±0.5°F)

Ambient Operating Range:

- Model BB701 Calibrates from -19 to 149°C (0 to 300°F)
- Portable Rugged Design
- Calibrates Infrared Pyrometers Quickly and Accurately
- Built in Digital PID Autotune Temperature Controller with Temperature Readout
- NIST Traceable Calibration Certificate Included with Three Data Points
- RS-232 Standard
- Special Nitrogen Purge Collar Limits Target Plate Condensation and Frosting at Low Temperatures
- Built-In RTD Reference Probe Output

The BB701 Blackbody Calibrator is a high performance, rugged, portable calibrator for infrared pyrometers. The BB701 Hot/Cold model has a range of -19 to 149°C (0 to 300°F). The BB701's ability to provide a stable, repeatable cold calibration point allows the user to calibrate or test most infrared pyrometers quickly and accurately without having to prepare an ice bath. Both models come with an RS-232 computer interface which allows computer control of the setpoints for automatic test applications. A NIST traceable calibration certificate is also provided.

Specifications

Operating Temperature Range:

Compact pH/ORP Single Limit Controller

Model PHCN-40
\$395

- ✓ High or Low Setpoint
- ✓ Easy to Use
- ✓ Low Cost
- ✓ ±500 mV Vendor Output

The economical PHCN-40 is an analog meter with a relay output for high or low limit control.

The new single limit controller is a general purpose pH/ORP controller for both laboratory and industrial use. It is AC powered, and features two-point calibration with manual temperature compensation. The pH meter's resolution provides accuracies of 0.01 pH and 10 millivolts allowing for very sensitive measurements.

Specifications

Readout: 15 cm (6") analog

Operation Modes: pH or mV

pH Measurements:

Range: 0-14 pH

Accuracy: ±0.05 pH

Temperature Compensation:

Manual 0-100°C (32-212°F)

Millivolt/Redox Measurements:

Range: ±900 mV

Accuracy: ±10 mV

Input Impedance:

Relays

Types/Outputs: Two or four (PHCN-676) electromechanical relays; SPDT (Form C) contacts; U.L. rated 5A 115/230 Vac, 5A @ 30 Vdc resistive

Functional Modes: Each relay (A, B, C, and D) can be assigned to be driven by the measured pH (or ORP) or temperature

Operating Modes

Control: Settings for high/low phasing, setpoint, deadband, overfeed timer, off delay, and on delay

Alarm: Settings for low alarm point, low alarm point deadband, high alarm point, high alarm point deadband, off delay, and on delay

Temperature Compensation:

Automatic or manual, -10 to 110°C (14 to 230°F) with selection for temperature compensator (Pt1000 Ω RTD, Pt100 Ω RTD, or NTC 300 Ω thermistor)

Calibration Methods:

1 or 2-Point Buffer Method (pH only);
2-Point Sample Method (pH only);
1-Point Sample Method (pH & ORP)

Analog Outputs

Two outputs (#1 and #2) each with 0.004 mA (12-bit) resolution, isolated 0 to 20 mA or 4 to 20 mA (selectable); 600 Ω max load

Connector: Stripped Leads

Weight: 0.6 kg (~1.3 lb)

Temp. Compensator: NTC 300 Ω thermistor

PHE-6028-PO Differential pH Sensor

pH Differential Sensor Technology

The unique differential sensor technology offers many advantages over conventional sensor technology. It uses three measuring electrodes instead of the two contained in conventional pH sensors. The process electrode and standard electrode measure the pH differentially with respect to a third ground electrode. This technique is proven to provide unsurpassed accuracy, reduce reference junction fouling, and virtually eliminate ground loops. The benefit is greater reliability with less downtime and maintenance.

The differential sensor, with its built-in preamplifier, boosts the high impedance mV signals of the electrodes, providing a strong signal which can be transmitted up to 914 m (3000 feet).

The PHTX-271 Series Transmitter is designed for broad application and ease of setup and use. The unit auto-configures for either pH or ORP use when connected to recommended OMEGA pH or ORP sensors. Multiple mounting options allow for installation best suited to your particular application. The automated "easy-cal" menu features automatic buffer recognition for mistake proof pH or ORP sensor calibrations. Two-line LCD provides sensor diagnostic information for ease in system maintenance.

Meter and Electrode

- ✓ PEEK Sensor Body Construction
- ✓ Dual-Glass Style Sensor
- ✓ Replaceable Sensor Saltbridge
- ✓ Electrode Breakage Diagnostic
- ✓ Universal Mounting Configurations
- ✓ Microprocessor Based System
- ✓ Large Dual Display Format
- ✓ Loop Powered, Fully Isolated

Sensor Features

Sensor housings are constructed of PEEK, a high performance thermoplastic that provides outstanding mechanical strength and chemical resistance. Multiple sealing materials are used to preserve sensor integrity over a wide range of applications.

A large volume, dual junction saltbridge is used to maximize the in-service time of the sensor. The annular junction provides a large surface area to minimize the chance of fouling. Large electrolyte volume and dual reference junction minimizes contamination of the reference solution. The replaceable saltbridge allows for easy sensor regeneration.

The reference element of this sensor is a second pH electrode immersed in a reference buffer solution. This glass reference system allows the sensor to be used in applications that poison conventional pH sensors.

An integral preamplifier is encapsulated in the body of the sensor. This creates a low impedance signal output which ensures stable readings in harsh environments, and maximize the distance between sensor and transmitter. Sensor diagnostics are used to alarm the user in the event of electrode breakage, loss of sensor seal integrity, or integral temperature sensor failure.

Sensor electrodes can be user-specified to ensure measurement reliability and maximum sensor lifetime. The type of glass used in the pH electrode can be selected for optimal performance. The metal electrode used for ORP measurements can be platinum or gold, depending on chemical makeup of the process solution.

Transmitter Features

The microprocessor-based transmitter is loop-powered and fully isolated for high service reliability. The transmitter includes devices to protect the system from power surge and brownout events.

The large, high contrast, super-twist display provides excellent readability over a wide operating temperature range, even in low light conditions. The main display line consists of large, segmented characters with measurement units. The secondary display line utilizes easily readable dot matrix characters for clear display of calibration and diagnostic messages. Two of four measured parameters may be displayed simultaneously.

Four-button programming provides intuitive navigation through the menu driven user interface. The 4-20 mA transmitter output can be configured to represent any portion of the measurement range. Output HOLD, ALARM and SIMULATION features provide the user with complete control of the system output under any condition

Diagnostic messages provide a clear description of system condition, which eliminates confusing error codes that must be looked up in the operator's manual.

The flexible two-point and sample calibration options include auto-buffer recognition from thirteen built-in buffer tables. Manual override of the automatic buffer values allows the user to customize calibration values. To ensure high accuracy, all calibration methods include stability monitors that check temperature and main parameter stability before accepting data.

OMEGA's PX4200 Series Transmitters bring state-of-the-art Silicon-on-Sapphire (SOS) sensor technology to the industrial arena. SOS construction uses very stable solid state silicon strain gages on a Sapphire carrier which is glass bonded to a titanium diaphragm. This combination provides a very durable transducer which has excellent stability and corrosion resistance over a wide temperature range. A loop powered 3 1/2 digit (-1999 to 1999) plug-on display adds versatility to the PX4200 by providing local display plus an available open collector set-point with 60 mA capability.

Specifications

Excitation: 13 to 36 Vdc with PM1000 18 to 36 Vdc reverse polarity protected
Load Driving Capacity: 1150Ω @ 36 Vdc.
 $R_{max} = (V_s - 13) / 20$ with PM1000 $R_{max} = (V_s - 18) / 20$
Output: 4 to 20 mA (2-Wire) with zero and span adjustments
Accuracy: ±0.25% FS includes linearity, and hysteresis
Repeatability: ±0.1% FS
Long Term Stability (1yr): ±0.2% FS
Media Temperature: -58 to 248°F (-50 to 120°C)
Ambient Temperature: -40 to 175°F (-40 to 80°C)
Thermal Zero Effect: <±0.016% FS/°F
Thermal Span Effect: <±0.016% FS/°F
Humidity: 95% RH non-condensing
Maximum Overpressure: 200% FS
Sensor: Silicon on Sapphire

PROCESS CONTROLLERS

Model CSC32K-C2 Front View

Model CSC32K-C2 Rear View

The CSC32 series compact benchtop controllers are ideal for laboratory use and applications requiring portable temperature and process control. Pre-wired input and output receptacles in the rear of the case enable quick and easy connections to power, input, power output and digital communications. These benchtop controllers are factory configured and calibrated for a dedicated input type by model number.

The 1/32 DIN CN9500 controller used in this benchtop controller series can be programmed for either On/Off, or PID Autotune Control (with autotune Feature) via the front panel or through the use of a PC and CN9-SW communications software.

CN9-SW software is designed to interface with the CN9300, CN9400, CN9500 and CSC32 Series benchtop controllers with optional communication hardware. Benefits:

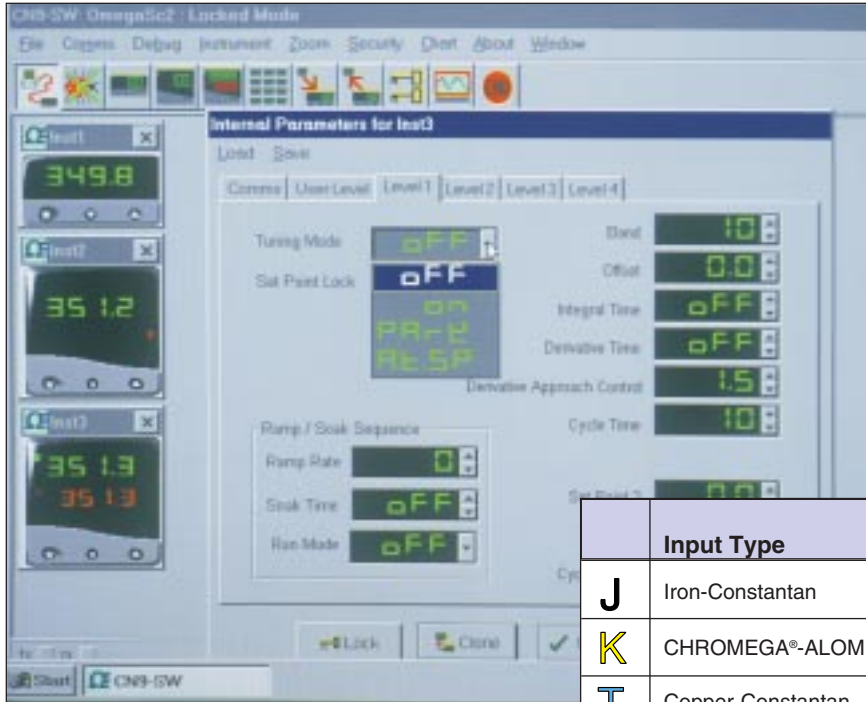

- Time saving benefit and convenience of remotely configuring and adjusting units
- Saving and retrieving settings to and from files
- Highly flexible logging and "real time" charting capability for providing hard copy QA records for ISO-9000 and other management purposes
- Software is capable of logging readings from up to 128 instruments which it stores in data files
- The data can be exported into text files in Comma Separated Variable format
- In addition, up to 12 controllers can be displayed on a single chart, or individual charts can be set up for each instrument
- A virtual full color chart recorder can log process variables such as: °C, °F, Bar, PSI, pH, rH, or user defined engineering units

Specifications

Power: 115 Vac, ±10%, 50/60 Hz
 Coming Soon: Optional 230 Vac 50/60 Hz
Display: 4-digit LED, 10 mm (0.4"), high brightness green display
Display Range: -199 to 9999 counts (hi-res mode -199.9 to 999.9)
Range: Sensor limited 2000°C/3500°F; -99.9 to 999.9° in 0.1° resolution
 240 V, 50 to 60 Hz

Display Indicators: Process variable (PV), Setpoint (SP), LED output indicators-flashing Output 1 (SP1 square), green; Output 2 (SP2 round), red; error messages, Function/Option mnemonics

Control Modes:

ID Autotune, ON/OFF, Direct/Reverse

Alarm Modes: deviation high, deviation low, deviation band, full Scale high, or full scale low

Thermocouple External Resistance: 100 Ω max

Thermocouple: See Table

Standards: IPTS/68/DIN43710 RTD Input: Pt100 2-wire (.00385)

Linear Process Inputs: mV range: 0 to 50 mV (1 ohm shunt resistor supplied for mA inputs)

Calibration Accuracy: ±0.25% of Full Scale ±1.5 °C

Sampling Frequency: Input 10 Hz, CJC 2 sec

Common Mode Rejection: Negligible effect up to 140 dB, 240 V, 50 to 60 Hz

Temperature Coefficient: 150 ppm/°C sensor max

Input Connection:

Thermocouple; Accepts both miniature and standard male Thermocouple Connectors (Note: A miniature and standard size male mating connector is included with each benchtop controller RTD, mA or mV; Accepts OMEGA® T series model TA3F Keyed-3-pin Locking Connector. Note: A mating connector is included with each benchtop controller

Outputs: Two solid state relays rated for 5 A @120Vac. (Internally, the controller provides two dc pulse outputs to drive a built-in dual solid state relay.)

Operating Ambient Range: 0 to 50°C (32 to 130°F)

Benchtop Case Material: Aluminum

Controller Case: Flame retardant polycarbonate

Power Connection:

Std. three prong power cord (provided)

Output Connections: Two standard 120 Vac outlets

Weight: 0.9 kg (2 lbs)

Static Mixers A Technical Introduction

Sizes:
3/8" - 2"
diameter

FMX7200 Series

OMEGA® FMX7200 Series mixers are designed for efficient turbulent-flow mixing at low pressure drop. Ideal for admixing water/wastewater treatment chemicals, polymer dilution, and other low-viscosity applications. Mixing elements consist of a series of polypropylene baffles, and are mounted in a PVC housing with FNPT ends. CPVC and clear PVC housings available.

Sizes:
1/8" - 2"
diameter

FMX8400 Series

OMEGA® FMX8400 Series mixers offer efficient mixing of low or high viscosity fluids at low pressure drop. Also ideal for two-phase (gas-liquid) mixing and blending of gases. Elements consist of a series of left and right helixes fabricated from 316SS. 304SS housing is corrosion-resistant, designed for high pressure and high temperature service. MNPT ends ensure easy installation.

Sizes:
1/2" - 3"
diameter

FMX9800 Series Sanitary Mixers

OMEGA® FMX9800 Series mixers are ideal for food and beverage processing, manufacturing pharmaceuticals and cosmetics, and other sanitary in-line applications. Features 3-A, 316LSS tube housing and removable 316LSS elements polished to a mirror finish. Tri-clamp flange ends permit easy removal, cleaning and reinstallation.

Sizes:
2" - 18"
diameter

FMX9200/ FMX9400 Series Process Mixers

OMEGA® PVC and CPVC mixers, and OMEGA all stainless and carbon steel mixers, are designed for higher flow rates and installations involving 2" to 18" diameter piping systems. Many standard models provide complete turbulent flow mixing at low pressure drop. Housing ends are 150# flanges. Special configurations to your specifications available.

Selection Guide

For each application, the designer must first determine the number of mixing sections required to achieve a complete mix. The guidelines below are based upon the Reynolds Number of your system. Also included are tables with some general application guidelines.

Next, the designer should select a diameter and/or a construction that will give the desired mixing performance without exceeding your system's maximum allowable pressure drop (see item 3 below).

1. Calculate the Reynolds Number. Use the diameter given in the charts. If both inside and outside diameters are supplied, use the inside diameter

$$RE = \frac{3157 \times Q \times S}{D \times MU}$$

2. Select a model based on the Reynolds Number.

FMX7000 Series Mixers:

| Reynolds No. | No. of Elements |
|--------------|-----------------|
| 800-1000 | 14 |
| >1000 | 7 |

| Typical Application | No. of Elements |
|--------------------------|-----------------|
| Ozone Absorption | 7 |
| pH Control | 7 |
| Gas/Gas Blending | 7 |
| Dilution of Chemicals | 7 |
| Polyelectrolyte Dilution | 14 |

FMX8000 Mixers:

| Reynolds No. | No. of Elements |
|--------------|-----------------|
| <10 | 24-32 |
| 10-500 | 16-24 |
| 500-2000 | 8-16 |
| >2000 | 4-8 |

| Typical Application | No. of Elements |
|-----------------------|-----------------|
| 1-1 Epoxies | 24 |
| Urethanes/Elastomers | 32 |
| Urethane Foam | 16 |
| In-line Aeration | 8 |
| Admixing of Additives | 8 |

3. Determine the Pressure Drop

Laminar Flow:
Reynolds Number < 500

$$DP = Q \times MU \times L$$

Turbulent Flow:
Reynolds Number > 500

$$DP = Q^2 \times S \times T$$

NOTE: If the pressure drop across the mixer exceeds its maximum rating, a modular mixer is required. For example, if a 24-element FMX8300 mixer is required and the pressure drop exceeds the 250 psi rating, we recommend coupling two 12-element mixers in series.

Symbols

RE = Reynolds Number—Dimensionless

Q = Flowrate in Gallons per Minute

S = Specific Gravity—Dimensionless

MU = Viscosity in Centipoise

D = Diameter in Inches

DP = Pressure Drop in psi

L = Laminar Factor—See Mixer Tables

T = Turbulent Factor—See Mixer Tables

All-Plastic Static Mixer Assemblies

FMX7200 Series
(NPT threaded models)

FMX7200 Series mixers are specially designed for waste water treatment, mixing additives, pH control, and polyelectrolyte dilution. These all-plastic mixers combine PVC or CPVC pipe with polypropylene internals. Certain sizes feature clipped sections, which eliminate sharp crevices where material can accumulate and plug up the mixer. Polypropylene has excellent chemical resistance to most acids and bases. The maximum service temperature of a standard

FMX7200 Series mixer is 60°C (140°F) with PVC housing, 82°C (180°F) with CPVC housing.

Specifications

| ¾" | 850 |
| ¾" | 690 |
| 1" | 630 |
| 1¼" | 260 |
| 2" | 200 |

The FMX7200 and FMX9200 Series are an effective answer to your mixing requirements. Operating in-line, with no moving parts, these mixers blend and disperse treatment chemicals into waste water streams. Compared to competitive mixers, its unique baffling design ensures complete mixing in a shorter length and lower pressure drop.

The FMX7200 and FMX9200 Series are easily installed in new or existing process lines. They are available in pipe sizes from ¾" to 18" diameter. Construction materials include PVC, CPVC, and polypropylene.

All Stainless Steel Static Mixers With Optional Teflon® Coated Elements

FMX8400 Series (flanged model)

FMX9400 Series (NPT threaded model)

FMX8400 Series pipe mixers feature 304SS piping (schedule 40 nominal) with 316SS elements. This series is available with Teflon® coating or non-coated stainless elements. Teflon® coating does not impart greater chemical resistance than stainless steel. The coating simply enhances the cleanability of the mixing elements. For routine maintenance, the elements can be pushed out and cleaned.

The leading and trailing edges of the mixers are "Knife Edged" to flush clean with less solvent, having no flat leading edges to accumulate material.

The FMX8400 and FMX9400 Series are an effective motionless mixer. When combined with metering pumps, these mixers replace expensive treatment tanks and dynamic mixers. Consider these advantages: Zero Maintenance, Low Cost, Easy Installation and Low Energy Consumption

Typical applications include both laminar or turbulent blending, liquid/gas contacting and enhanced heat transfer. The mixing process is modular: the more difficult the application, the greater number of elements required.

Stainless tube and Spiral Sanitary Mixers FMX9600 Series/FMX9800 Series

FMX9600 Series

The FMX9600 Series Spiral mixers are designed for high-pressure applications such as two component adhesives and sealants. The mixers consist of a series of left and right hand spiral elements which have been "edge-sealed" into a tube. The spiral tube mixer is available in four diameters and with 15 to 32 elements. The elements have been microbrazed along their complete length and cannot be removed from the tube. Consider the advantages of this all-stainless steel assembly: the moderate price offers significant savings over competitive mixers, the contour of the elements ensures that the mixer flushes clean with less solvent, and the tube mixers are manufactured with heavy walled tubing, which resists warpage during furnace cleaning and increases the life of the mixer.

Specifications

Elements: 316 stainless steel, non-removable

The mixer comes with plain ends. The elements are edgesealed to the housing to handle the mixing of high pressure or highly viscous materials. Elements are 316SS and the housing is 304SS.
Ordering Example: FMX9601, spiral mixer, \$126.

FMX9800 Series

The FMX9800 Series Sanitary Mixers are ideal for processing foods, pharmaceuticals, cosmetics and beverages. Compared with dynamic mixers, which involve agitators, motors and seals, motionless mixers have no moving parts. The mixer consists of a series of spiral elements. The elements convert the tube into a maze or labyrinth. As the fluids are pumped through the mixer, they are progressively divided and recombined. The result is efficient in-line mixing.

The FMX9800 Series can be quickly installed in new or existing process lines. The interior mixing elements can be easily removed for cleaning. This assembly meets 3A sanitary requirements.

Specifications

Tube Mixers 1/2" through 3"

Elements: 316LSS removable, highly polished to 32Ra or better finish

Housing: 316LSS, 3A sanitary design

Ends: 316LSS tri-clamp flange (clamps, gaskets not included)

Display Type

Trend display
(maximum 12 simultaneous channels)
The trend display direction (vertical, horizontal) and background color (white, black) can be switched.

Digital display
(maximum 6-channel switching display)
Displays digital measurements, as well as channel tag numbers, engineering units, and alarm statuses.

Bar graph display
(maximum 6-channel switching display)
Vertical and horizontal bar graphs can be selected.

Historical trend display
Allows past data saved in memory to be played back. In addition, historical and current trends can be viewed at the same time.

Overview display
Allows digital readings and alarm statuses on all channels (including calculation channels) to be monitored.

Information display
Displays an alarm summary, message summary, and report data.

Economical Environmental Wall Mount Sensors Stylish Office/Laboratory Design

- ✓ Thermocouple, RTD or Thermistor Sensor Models
- ✓ Temperature, Temperature/Humidity and Barometric Pressure Transmitter Models
- ✓ Stylish Design Blends in Well with Office, Computer Room or Laboratory Décor

OMEGA's new low cost environmental wall mount sensors offer the perfect solution for keeping your office, computer room or laboratory's décor looking great at an economical price. These miniature units come in 6 models that will interface directly with most process meters, controllers, recorders, data loggers and data acquisition systems. Thermocouple, RTD and Thermistor models come with 914 mm (36") leads standard. Temperature, temperature/ humidity and pressure units come with user selectable industry standard 4-20 mA or 1-5 Vdc output.

Specifications

General

Enclosure Material:

Acrylonitrile Butadiene Styrene

Dimensions: 79 x 54 x 45 mm
(3.12 L x 2.12 W x 1.78" H)

THERMOCOUPLE SENSORS

Max. Temperature: 60°C (140°F)

Accuracy: ±1.1°C (1.98°F)

Sensor Types: J,K,T,E

Sensor Lead Length: 914 mm (36")

Lead Material: 24 AWG, Teflon® coated

RTD SENSOR

Max. Temperature: 60°C (140°F)

Accuracy: ±1°C (1.8°F)

Sensor Type: 100 Ohm Pt. .00385

Sensor Lead Length: 914 mm (36")

Lead Material: Teflon insulated

3 conductor 26 AWG stranded

Nickel Plated Copper

THERMISTOR SENSOR

Max. Temperature: 60°C (140°F)

Accuracy: ±.2°C (.36°F)

Sensor Type:

OMEGA® "400" Series 2252 Ω @ 25°C

Sensor Lead Length: 914 mm (36")

Lead Material: PVC insulated

2 conductor 22 AWG stranded

Nickel Plated Copper

TEMPERATURE TRANSMITTER

Temperature Specifications:

Range: -15 to 60°C (5 to 140°F)

Accuracy@ 25°C:

In Still Air: ±1.2°F(0.7°C)@24°C;

±2.5°F(1.4°C) across full range

In Moving Air: ±2.5°F(1.4°C)@25°C;

±3°F(1.7°C) across full range

Note: Not recommended for fast moving air applications

Repeatability: ±0.5°F (0.3°C)

Output: 4-20 mA or 1 to 5 Vdc (scaled across range)

Temp Time Constant: (for 63.2% response);

9 sec. in moving air (1M/sec.); 30 sec. in still air

Power: 8 to 24 Vdc @ 20 mA

Max. Loop Resistance:

Ohms = (V supply - 8V)/0.02 A

Sensor Type: Solid State

TEMPERATURE/HUMIDITY TRANSMITTER

Relative Humidity Specifications:

Range:5-95 (non-condensing)

Accuracy@ 25°C: From 5-20%,±4%RH

From 20-80%,±3%RH

From 80-95%,±4%RH

Repeatability: ±1%RH

Temp Compensation Range:

-15 to 60°C (5 to 140°F)

Output: 4-20 mA or 1 to 5 Vdc

(scaled for 0 to 100%RH)

Power: 8 to 24 Vdc @ 20 mA

Max. Loop Resistance:

Ohms = (V supply - 8V)/0.02 A

RH Time Constant: 100 sec.,

from 20-90%, 60 sec from 90-20%

Sensor Type:

Thin film polymer capacitor

(See Temperature Transmitter for Temperature Specifications)

BAROMETRIC PRESSURE

TRANSMITTER

Pressure Range:

16 to 32 in. of Hg

Temp Compensation:

Across full range

Accuracy: 1% of span

Operating Temp Range:

-18 to 60°C (0 to 140°F)

Output:

User selectable 4-20 mA, 1 to 5 Vdc

Power: 8 to 24 Vdc @ 40 mA

Max. Loop Resistance:

(V supply - 8V)/0.020 A = Ohms

Media Compatibility:

Clean dry air, non-corrosive gases

OMEGAETTE™ — Moderately Priced Instruments. Ideal for Education, Training and Demonstration Programs.

HH307/HH308 Mini Thermometer

- ✓ Wide Measurement Range, -200 to 1370°C (-328 to 2498°F)
- ✓ Auto Ranging
- ✓ Auto Power Off
- ✓ Dual Input – HH308
- ✓ Dual Display – HH308
- ✓ REL Function
- ✓ Hold Function
- ✓ Min/Max function
- ✓ Resolution 0.1°C/0.1°F

The HH300 Series is a low cost digital thermometer, small enough to fit in your pocket. They are available in single or dual input models with standard features such as min/max reading, reading hold, and both are °C to °F switchable. Their temperature range is from -200 to 1370°C (-328 to 2498°F). This low cost meter will read Type K thermocouple and accepts any subminiature Type K thermocouple connector.

TC TYPE

Thermocouple Type K,E,J,T select key
Press and hold down the this key while pressing the POWER key to enter the TC select mode. Each press of the TC TYPE key switches between TC types. The press POWER key to enter selection. (Type K is factory preset)

CH

Input channel select key (HH82 Model Only)
With each press, the channel switches through the sequence of chA, chB and then chA-chB.

DATA HOLD

Data Hold key
A held value can be stored in the memory of an optional memory number which is selected by the ▲▼ keys.

RECORD

Maximum and Minimum record key
Stores the maximum and minimum values from the time RECORD is pressed.

Data Record key
Stores the held measurement values in memory (up to 10 readings.)

READ

Resolution select key
With each press select the resolution of 0.1°C or 1°C.

REL/ADJ

Maximum and minimum values and stored data read key

Every time this key is pressed, the maximum and minimum values, stored data, and the current measured data are displayed in sequence.

Relative display select key

Displays measured values with reference to the value obtained immediately before the key was pressed. Each press of this key can select or release the relative display.

Simplified correction mode key

Sets the correction value and selects active/inactive of the simplified correction function.

Data call-up key

Used to select a memory number when calling up stored data. Also used to adjust the correction value for the simplified correction mode.

NEW**TEMPERATURE**

HH80 Series Thermo-Collectors HH83 Thermistor Input

External probes (-30°C to 200°C) [-22°F to 392°F]

There are three types available: a needle probe for mid-point temperature, a rounded end probe for liquid temperature, and a surface probe for surface temperature.

Built-in sensor (-20°C to 50°C) [-4°F to 122°F]

Measures ambient temperature, and allows for continuous measurement inside a warehouse or during transportation.

HH83/84 Common Features

Memory key

Each press of this key saves the measured data, along with 3 other monitoring items: the name of the object being measured, operator's name, and date and time of measurement.

Selection of registered tag name

Select from the list of up to 50 registered tag names (objects to be measured).

Input selection key

Collector/Logging mode selector key

Switches between the collector mode (saves measured data when necessary) and logging mode (saves measured data continuously).

- When used in the collector mode only, saves up to 5000 data items.*
- When used in the logging mode only, saves up to 20000 data items.*

Measuring interval: 1 second to 24 hours (Under simultaneous 2-channel measurement with the HH84, 2 seconds is the minimum.)

Start-of-measurement time: timer can be set.

* Under simultaneous 2-channel measurement, the HH84 saves 2 data items for one measurement.

User-friendly FUNC key

You can select setup items in the same way as you choose options from the built-in menu of a cellular phone.

Selection of operator name

With the (1) key, you can recall a list of up to 10 operator names and can also change any of these names.

Record-keeping on measurement failure handling

By pre-registering a list of up to 32 comments on how to handle particular measurement failures, you can keep records of how the measurement failure was dealt with by selecting the desired comment from the list using the (4) key.

(The HH83 supports this feature with HH83 Version 1.10 when used with application software version 1.30 or later.)

Setup keys

Register tag names, set alarm points, and define measuring conditions, such as the measuring interval for the logging mode. These setting tasks can also be carried out from a PC.

Digital input terminal

For connecting to an optional non-contact probe.

RS-232C I/O terminals

Used to exchange data with a PC or send data to a dedicated printer.

Each unit comes with software, RS232C cable, 2-AA batteries, manual.

Ordering Example:

HH83 Thermistor thermometer with HH83-SP surface probe, \$580 + 170 = \$750

Drip-proof construction (HH83/84)

Conforming to IP54 standards, the HH83/84 can still function even if it becomes wet to some degree. In addition, the optional waterproof cover increases waterproofing and protects the instrument against possible dirt contamination.

HH500/HH502VC Temperature/ Voltage/Current RS-232 Recorder

Features

- Built in thermal printer for text and graphic printout.
- Dual 5 digits big font LCD display to provide simultaneous readout of T1 and T2. 10 character text area provide setup menu for easy setup.
- The easy access menu buttons and text area in the LCD display provide a simple and intuitive hierarchical menu operation for system setup.
- Button group for thermometer provides the direct access to the most commonly used functions for temperature measurement.
- Button group for printer provides direct access to the most commonly used functions for printer control.
- Photo coupler isolated RS-232 port provides the direct connection of data flow to a personal computer with software for Windows 95/98 or Windows NT4.0
- Dual inputs thermal couple connector provides two inputs for K and J type temperature sensors.

OMEGA's digital tester calibrator CL518 is designed for maintenance and calibration of physical quantities either on-site or in labs.

Functions

The CL518 is designed for checking equipment in telemetry loops, such as sensors, transmitters, positioners, converters, controllers. Delivered with elastomeric enclosure, the CL518 is self-contained thanks to rechargeable battery pack. It can operate on AC power without battery discharge. It includes an alphanumeric display and a very comprehensive 24-key keypad allowing easy programming and processing thanks to help messages available in several languages. It can also store up to 1000 measurements in one or more bursts.

(1) In ± (% rdg + n digits) at 23 ± 1°C. {90 days}
 (2) Thermocouple simulation 0.1° resolution. Accuracies are for 0°C reference junction. Using the internal reference junction, except thermocouple B, add an uncertainty of 0.2°C.

Additional Functions: Temperature in measurements and simulation functions can be expressed either in °C or °F.

Measurement Trigger: Automatic or keypad key; burst triggering can be programmed from 1 to 1000 successive measurements with a time interval from 0.5 to 3400s.

Autoranging with voltage and resistance functions:

Relative Measurements:

The unit reads the deviation regarding a value measured and stored as a reference. L=M-R with L value read, M value measured with the chosen function and range an R reference value.

Display According to a Conversion Law: The unit reads the function L= aM + b with L value read, M value

measured with the chosen function and range; a and b are defined by the unit on the basis of the desired L1 and L2 values for the the corresponding values of M1 and M2, the data having previously been entered on the keypad.

Step Generator: The emission signal can vary per step, those amplitude and positive or negative directions are defined using the keypad.

Ramp Generator: The emission signal can vary continuously between two predetermined values, after programming values of level v1 and v2, times T1 to T4 and number of n successive cycles.

Storage of Emission Values: 100 simulation values can be programmed and stored in non-volatile memory. They can be recalled using the keypad.

Measurement Memory: It can store the number, function, range and value

of the last 1000 measurements or n bursts of p measurements (E.g.: 250 bursts of one measurement). The unit computes the average and determines the maximum and minimum of the values for each burst.

Recalling Measurements:

The values can be either: recalled using the keypad and read on the display, or converted into 4-20 mA or 0-1 V analog signals available on the unit terminals; the time interval between outputs of 2 consecutive measurements is selected by program.

The new ice point™ reference chamber TRCIII-A is the latest addition to OMEGA's fine line of calibration reference instrumentation. The TRCIII-A ice point™ reference chamber relies on the equilibrium of ice and distilled, deionized water at atmospheric pressure to maintain six reference wells at precisely 0°C (32°F). Each well extends into a sealed cylindrical chamber containing the distilled deionized water. The outer walls of the chamber are cooled by thermoelectric cooling elements. The increase in volume produced by the creation of ice crystals within the cell is sensed by the expansion of a bellows, which operates a micro switch and controls the cooling elements. The alternate freezing and thawing of the ice accurately maintains a 0°C environment around the reference wells.

Mini hot point® Dry Block Probe Calibrator

CL1000 Series

\$990

Basic Unit

230 Vac
model only

- ✓ Built-in Digital $\frac{1}{2}$ DIN Temperature Controller
- ✓ Rugged Miniature Handheld, Benchtop and Portable Design
- ✓ Fast, Accurate, Stable Readings
- ✓ Fast Heat-Up/ Cool-Down Time
- ✓ Standard and Metric Well Designs Available
- ✓ Automatic Fan Cooling
- ✓ 230 Vac Models CE Marked
- ✓ NIST Calibration Certificate With 2 Data Points Included
- ✓ Soft Carrying Case, Power Cord and Complete Operator's Manual Included

OMEGA's new CL1000 Series mini hot point® dry block probe calibrator offers a fast, accurate, stable solution for calibrating temperature probes in both the laboratory and in the field by providing a lightweight, rugged miniature design. There are 4 different probe well styles available (shown on next page). The CL1000 Series has been engineered into a custom fabricated metal enclosure together with a high performance $\frac{1}{2}$ DIN controller, and has been designed to meet a high

level of quality, reliability and safety. Each 230 Vac unit carries the CE mark and has achieved performance results high above the required levels. The calibrator has a temperature calibration range of ambient +10 to 260°C (ambient +20 to 500°F) and can operate in an environment of 0 to 50°C (32 to 122°F) and a relative humidity of 0 to 90% non-condensing.

Each CL1000 comes complete with power cord, soft carrying case, operator's manual, and calibration certificate

We make running changes when technical advances allow. Check at time of ordering for additional features.

OMEGA's hot point® calibrator is part of a new family of calibrators which allows calibration of thermocouple and RTD probes quickly and easily with an accuracy to $\pm 0.8^{\circ}\text{C}$ ($\pm 1.5^{\circ}\text{F}$). An integral RTD sensor assures high measurement accuracy and repeatability. A built-in microprocessor-based PID digital controller assures exceptional stability. Setpoint and actual temperature are displayed simultaneously. Temperature can be set in one degree increments from ambient +22 to 482°C (ambient +40 to 900°F).

The CL900A calibrator accepts a variety of optional inserts which are available in 4" and 6" depths, and probe diameters from $\frac{1}{8}$ " to $\frac{3}{8}$ ". An undrilled insert is also available. The CL900A comes complete with a 6" deep insert well for $\frac{1}{4}$ " diameter probes, and insert removal tongs. Additional inserts can be ordered separately as required for other diameter probes. 6" well depth inserts

are used for probes 7" and longer. Four inch well depth inserts are used for probes 5" and longer.

The CL950A has a fixed thermal well with $\frac{1}{16}$ ", $\frac{1}{8}$ ", $\frac{3}{16}$ " and two $\frac{1}{4}$ " diameter holes. The CL950A-M has metric holes (2 mm, 3 mm, 4.5 and two 6 mm diameter holes).

OMEGACARE™ extended warranty program is available for models shown on this page. Ask your sales representative for full details when placing an order.

Caution: To avoid fire hazard or damage to your calibrator, always allow your calibrator to cool down to ambient temperature before returning to storage.

WATER ANALYSIS

Stormwater Sampler

The SWS-201 Stormwater Sampler is designed specifically to meet the sampling requirements of the Stormwater program. The SWS-201 Sampler takes a "first flush" sample in one bottle and a "time weighted" composite sample in the second bottle, to meet the guidelines. It is actually two samplers in one: it consists of two intake tubes, two sampling pumps and two bottles, which eliminates any possibility of cross contamination between the first flush and the composite sample. The SWS-201 Stormwater Sampler is easily set up and installed in any stormwater channel to take and store physical water samples throughout the storm event. The SWS-201 Stormwater Sampler consists of a rugged, rainproof lockable carrying enclosure. Inside the enclosure are two 4000 ml polyethylene sample bottles for first flush and composite samples, two peristaltic sampling pumps, the logic timer/controller, the water sensor, and a rechargeable gel cell battery. Also provided is the rain gauge, two sample pickup hoses and a battery charger. Everything you need is provided for a successful sampling program. The SWS-201 Stormwater Sampler is controlled by the water sensor. The water

sensor can be used to trigger the sampler based on rainfall or raise in water level in the storm drain. The internal rechargeable battery will power the sampler for several months and/or for several storm events. Each sample bottle is equipped with a float switch which automatically turns off the sampler pump if the bottle becomes full. The Sampler is provided with a 10 cm (4") cylindrical raingauge. The water sensor may be positioned in the raingauge to trigger the sampler after a preset amount of rainfall. Total rainfall for the event is also measured by the raingauge. The Sampler is not damaged by water or moisture or severe environmental conditions. All parts may be washed with soap and water

Specifications

Sample Size: First Flush: 4000 ml
Composite: 200 ml at 10 minute intervals, or set by user. 4000 ml composite sample maximum.
Size: 23 L x 43 W x 56 cm H (9 x 17 x 22")

Wastewater Sampler

SWS-300
\$995
Complete Kit

- ✓ Time Weighted Composite Sample
- ✓ Backflushes After Each Sample
- ✓ Portable or Fixed Installation
- ✓ Rugged and Reliable

The SWS-300 Wastewater Sampler is designed specifically to meet the sampling requirements for industrial discharges, sewers, rivers and streams. The Sampler takes a "time weighted" composite sample in a 2 gallon bottle, to meet the wastewater sampling guidelines. The SWS-300 Wastewater Sampler is easily set up near industrial discharges or streams. It can also be suspended in a manhole for sewer flow sampling. The SWS-300 Wastewater Sampler consists of a rugged, rainproof lockable carrying enclosure. Inside the enclosure is a 2-gallon polyethylene sample bottle for collecting composite samples, a peristaltic sampling pump, the logic timer / controller and a rechargeable gel cell battery. Also provided is a sample pickup hose and a battery charger. Everything you need is provided for a successful sampling program.

The internal rechargeable battery will power the sampler for several months and/or for several sampling events. The sample bottle is equipped with a float switch that automatically turns off the sampler pump if the bottle becomes full. Be sure the electrical lead from the bottle cap is plugged into the jack on the bottom of the controller housing. Sample size can be adjusted for 25 ml to 600 ml and sampling interval can be adjusted from 5 minutes to 4 hours.

Shown smaller than actual size

After each sample is taken the pump reverses direction and backflushes to remove water from the line and clean the intake screen.

PHH-703 Water Analyzer with Universal Voice Recording System

The PHH-700 is a compact, battery-operated, mobile field unit. It can make multiple measurement of pH, conductivity, dissolved oxygen, and temperature of water and aqueous solutions.

The operator can choose to have either uncompensated measurements or values that have been compensated for extrinsic effects. When using the compensated modes, the conductivity and pH values will be corrected for temperature. Dissolved oxygen readings are corrected for temperature, salinity, and atmospheric pressure.

All of these parameters, except atmospheric pressure, are measured with a single compact probe which is equipped with the following standard length of cables: 3 m, 8 m, 15 m, 30 m (10', 25', 50' and 100'). This allows remote measurements to be taken,

without the need to draw a sample. The standard PHH-700 unit comes with:

- ✔ Carrying case for meter, probes and charger
- ✔ Instruction manual
- ✔ A/C adapter-charger
- ✔ Rechargeable battery
- ✔ Low battery indicator
- ✔ Large 4 x 16 LCD display with side light

Additional options:

- ✔ Custom back pack for the PHH-700 probe, solutions, water bottle holder, cell phone holder, maps, writing utensils, first aid kit and accessories.

TRCN-96
\$1995
 Includes Sensor and Analyzer

The TRCN-96 low-range turbidimeter system employs a technologically advanced sensor to provide high measurement accuracy and stability, while reducing maintenance requirements. It is designed to meet the International Standards For Measurement of Turbidity [ISO 7027-1984(E)] and USEPA-approved method. This system has an auto-ranging measuring scale, enabling continuous monitoring over a 0.000 to 100.0 NTU range with automatic decimal point positioning. The TRCN-96 low-range turbidimeter system automatically provides increasing display resolution as measured turbidity decreases. To further ensure high measuring accuracy, the sensor eliminates air or gas bubbles in the sample with its built-in bubble trap. The system is ideal for critical monitoring and controlling applications including potable water, filtered water, and final product clarity. The analyzer provides two isolated analog outputs. Each output represents measured

turbidity and is scalable. During calibration, both analog outputs can be programmed to hold their present values, to transfer to preset values to operate control elements by an amount corresponding to those values, or to remain active to respond to measured turbidity. The analyzer has four electromechanical relays, all with SPDT contacts. Each relay can be set to function as a control relay, as a dual-alarm relay, or as a status relay. Calibrating the TRCN-96 is simple. A funnel assembly included with the sensor enables calibration with a traditional liquid turbidity standard such as Formazin. A unique, optical calibration cube is also available for easier calibration. This contains a specially formulated turbid glass standard which maintains its turbidity value indefinitely. The only required maintenance is an occasional, simple cleaning of the sensor flow chamber. (System diagnostics automatically alert the operator when to clean the sensor flow chamber.)

Specifications

Turbidity Sensor

Operational

Flowrate: 0.05 to 7 GPM (0.19 to 26.5 LPM)

Ambient Conditions: 0 to 60°C (32 to 140°F)

Sample Temperature Range: 0 to 60°C (32 to 140°F)

Pressure Range:

0 to 3.4 bar at 20°C (0 to 50 psig at 68°F)

Pressure Drop: 0.0017 psig at 0.1 GPM; (0.0001 bar at 0.36 LPM)

Residence Time:

9.5 seconds at 1 GPM (3.8 LPM)

Air Venting: Integral bubble trap for 0.05 to 5.0 GPM (0.19 to 1.8 LPM) flows.

Installation of restrictor valve on the sensor outlet is recommended for flows above 0.5 GPM (1.8 LPM) with air in sample.

Mechanical

Light Sources: Two near-infrared (860 nm wavelength) LEDs

Sensor Flow Configuration:

Flow-through design

Process Connections: 1/2" NPT female standard; adaptable to 3/8" or 1/4" NPT, barb or tube fittings

Wetted Materials: PVC, polycarbonate, polystyrene, PPO, nitrile and Buna-N

Cleaning Method: Water rinse, wipe surface

Enclosure: NEMA-4X, compression-molded and fiberglass reinforced polyester

Mounting Configurations:

Surface or pipe mount

Net Weight: 4.5 kg (10 lb), approximately

Turbidity Analyzer

Display: Graphic dot matrix LCD, 128 x 64 pixels with LED backlighting; 13 mm (1/2") main character height; 3 mm (1/8") auxiliary character height

Measurement (Auto Ranging Scale)

Turbidity: 0.000 to 100.0 NTU with auto-ranging and decimal point shift above 1.000 NTU and 10.00 NTU

mA Outputs (#1 and #2):

0.00 to 20.00 mA or 4.00 to 20.00 mA

Ambient Conditions

Operation: -20 to 60°C (-4 to 140°F); 0 to 95% RH, non-condensing

Storage: -30 to 70°C (-22 to 158°F); 0 to 95% RH, non-condensing

Relays: Types/Outputs: Four electromechanical relays; SPDT (Form C) contacts; U.L. rated 5 A 115/230 Vac, 5A @ 30 Vdc resistive

Operational Mode: Each relay (A, B, C and D) can be driven by the measured turbidity, or by any of seven detected system diagnostic conditions

Function Modes

Control: Settings for high/low phasing, setpoint, deadband, overfeed timer, off delay, and on delay

Alarm: Settings for low alarm point, low alarm point deadband, high alarm point, high alarm point deadband, off delay, and on delay

Status: Not configurable; relay only activates when any of these diagnostic warning conditions exist: sensor needs cleaning, analyzer failure, sensor failure,

light source 1 failure, light source 2 failure, detector 1 failure, or detector 2 failure

Sensor-To-Analyzer Distance:

9 m (30 ft) maximum (consult engineering for distances more than 20 ft)

Power Requirements: 90 to 130 Vac, 50/60 Hz (10 VA max) or 180 to 260 Vac, 50/60 Hz (10 VA max)

Calibration Methods

Primary: Enter one primary standard value (Formazin suspension is recommended)

Cube Cal: Temporarily insert an optional Cal-Cube assembly into the sensor and enter its factory-certified standard value

Sample: Enter one sample value determined by laboratory analysis or calibrated portable meter

Outputs

Analog: Two outputs isolated 0/4-20 mA (600 Ω max load)

Mechanical

Enclosure: NEMA-4X; polycarbonate face panel, epoxy-coated cast aluminum door and case with four 13 mm (1/2") conduit holes, nylon mounting bracket, and stainless hardware

Mounting Configurations:

0.01% of span per °C

TRCN-96 Analyzer

Typical Applications

- ✓ Drinking Water
- ✓ Filtered Water
- ✓ Final Product Clarity
- ✓ Wastewater Treatment Plant Effluent

Four-Beam Technology

The four-beam method uses two light sources and two photodetectors spaced at 90° intervals around the sample chamber. Two measurement phases provide four independent measurements from two light sources. During phase I, photodetector #2 provides a 90° scattered light active signal, while photodetector #1 provides a forward scattered light reference signal. During phase II the process is reversed.

The microprocessor uses a ratiometric algorithm to calculate the turbidity value from the four readings.

This method mathematically cancels error effects from aging or fouling of components, and compensates for color effects. Even as detector sensitivity changes with age, the four-beam method neutralizes the effects of these changes without calibration.

Water Quality Test Strips Free Chlorine Water Check

WTS Series
\$13.95
Basic Unit

- ✓ Quick and Easy-to-Run with No Setup Time Completely Portable for Field Use
- ✓ Minimum Technical Know-How Required Since No Sample Mixing or Reagent Mixing is Required
- ✓ Safe Since Chemical Weight on One Strip is Only 3% of What One "Powder Pillow" Contains
- ✓ Ideal for Measuring Cloudy and Colored Water Samples with Negligible Effect on Test Results

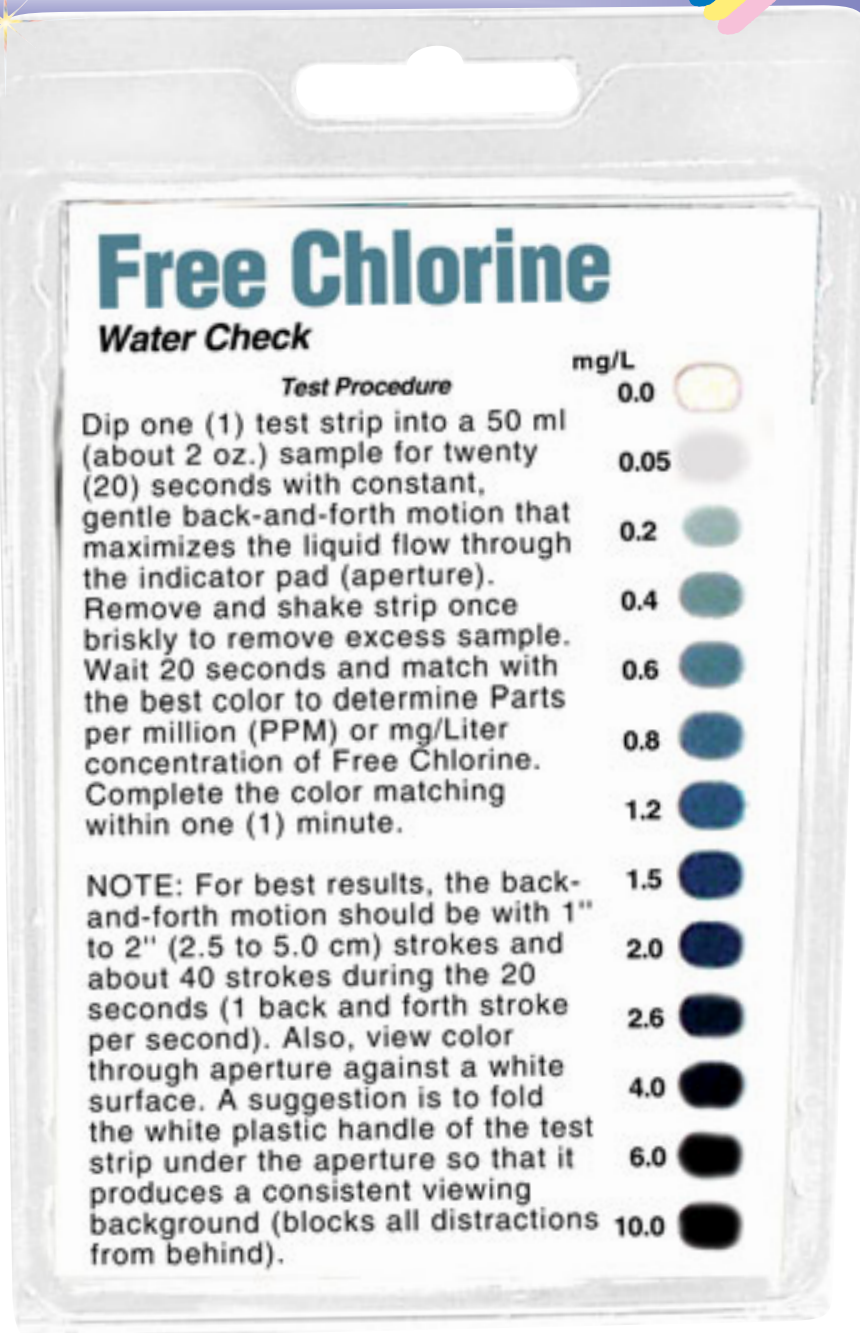

Free Chlorine Water Check

The latest product in a line of continuous product innovations, the Free Chlorine Water Check offers the user an extremely comprehensive testing system. Currently under US EPA evaluation, the test offers a range of 0.05 to 10 PPM (mg/L) with no monochloramine interference. With accurate and reproducible results in under 1 minute, the Free Chlorine Water Check (Models: WTS-481026 and WTS-481126) is sure to revolutionize Free Chlorine testing as you know it.

Free Chlorine

These water quality tests are the sensitive and safe alternative to wet chemical free chlorine tests. A mechanical reader is not required, even for the 0.05 PPM or mg/L sensitivity. The unique indicator is reactive only to free Chlorine; therefore, no interference to monochloramines occurs. Accurate results are achieved in under 1 minute. Products are available with ranges from 0.05 to 750 PPM (mg/L).

Most test strip products are available in two different packages; individual packets with a detailed color chart card or in bottles labeled with a color chart. No matter which option you choose, all products offer the same high level of quality and reliability.

Specialty Combination Strips

Testing multiple parameters in water takes time and money. With these combination test strips you can reduce testing time and expenses. Testing for free and total chlorine on the same strip, the WTS-480655, offers accuracy and reliability. If more parameters are required, the 4-in-1 water check tests for total chlorine, pH, total hardness and total alkalinity. The 5-in-1 strips test for pH, total alkalinity, total hardness, free chlorine and total chlorine, all on one strip!

Water Quality Test Strips

pH and Total Alkalinity

pH is a natural part of water chemistry. pH Check test strips are designed to offer highly accurate results with minimal cost. For a more comprehensive test try the combination pH/total Alkalinity test strips.

Total Hardness

Calcium is found in water naturally from leaching. A typical sign of high calcium is scale that can build up in your bathtub. Accurate calcium measurement is very important to prolong the life of appliances and plumbing. The Total Hardness test strip provides accurate and reliable measurement without sacrificing time and money. This product produces accurate results in only one second!

Peroxide and Iodine Check Strips

With the usage of alternative oxidizers becoming more predominate, you need a quick, reliable and economical test. Offering sensitivities from 0.05 to 30,000 PPM (mg/L), Peroxide Check answers demanding testing needs. Iodine has been used for many years as a sanitizing agent. Measurement concerns have necessitated the need for an accurate, economical way to check Iodine levels. Iodine Check offers the user a wide range of sensitivity, 0.02 to 300 PPM (mg/L), while still remaining accurate and affordable.

Manufactured under exacting conditions, all of these products provide accurate results ideal for the food, medical, industrial, and potable water industries.

Iron and Copper Test Strips

Whether you are testing for Iron or Copper on surfaces or in water, OMEGA has a solution for you. Iron and Copper tests make short work of an otherwise frustrating project. Requiring no mechanical reader or extra reagents, Iron test is an extremely accurate and sensitive test for measuring from 0.02 to 5.0 PPM (mg/L) in water. Designed to complement the Iron test product, Copper test strips report results from 0.5 to 10.0 PPM (mg/L) without the need for a mechanical reader or hazardous reagents to mix.

Nitrate Nitrogen and Nitrite Nitrogen

Nitrate Nitrogen and Nitrite Nitrogen can be very harmful in water. Side effects range from a lack of energy all the way to severe illness and, sometimes, death. Quickly and accurately determining the presence and levels of Nitrates and Nitrites in your water can save more than time and money. Nitrate/Nitrite Nitrogen test strips offer the user more than accurate, cost-effective results. The precise measuring tools offer the user peace-of-mind and safety. Ideal for the potable water industry, food industry, medical industry and educational classes. Nitrate/Nitrite Nitrogen test strips offer a sensitivity of 0 to 50 PPM (mg/L) for Nitrates, and 0.15 to 10 PPM (mg/L) for Nitrite Nitrogen. With a large, easy to read color chart and an economical price, Nitrate/Nitrite Nitrogen test strips are a must for any scientific tool kit.

WATER ANALYSIS

Portable Turbidity Meters

220 V
Version Only

- ✓ EPA Compliant
- ✓ For Field and Lab Use
- ✓ For Range 0 to 1100 NTU
- ✓ RS-232 Interface
- ✓ Very Economical
- ✓ Micro-Processor Based
- ✓ User-Friendly Calibration and Operation

The TRB-2020 combines laboratory accuracy and reliability in an extremely compact, portable instrument for turbidity measurement over the wide range of 0 to 1100 NTUs.

A multi-detector optical configuration assures long term stability and minimizes stray light and color interference. All readings are determined by the process of signal-averaging over a 5-second period minimizing fluctuations in readings attributable to large particles and enabling rapid, highly repeatable measurements.

Supplied with a 9 volt alkaline battery and an ac power adaptor, the TRB-2020 is an ideal choice for regulatory monitoring, process water testing, and environmental water analysis in the field or laboratory.

This nephelometric turbidity instrument meets or exceeds EPA design specifications for NPDWR and NPDES turbidity monitoring programs (as specified by USEPA method 180.1). There is also an EPA compliance reading mode which rounds the readings to meet EPA reporting requirements.

Range:

0 to 1100 NTUs. The microprocessor enables auto-ranging over the full range of 0 to 1100 nephelometric turbidity units (NTUs) and provides direct digital readout with a resolution of 0.01 for the lowest range and an accuracy of $\pm 2\%$.

The simple calibration procedure involves activating the UP or DOWN arrow keys until the reading matches the standard. The microprocessor adjusts the factory-programmed calibration curve accordingly. Two primary turbidity standards are provided.

Shown Smaller Than Actual Size

Model TRB-2020
\$795
Basic System

An RS-232 port is provided to interface with a datalogger or computer.

Attractively priced, the TRB-2020 portable turbidity meter comes with AC adaptor, four optically selected sample vials with screw caps, standardization package consisting of 1.0 NTU and 10.0 NTU AMCO standards, and illustrated instruction manual, all in a sturdy carrying case.

SPECIFICATIONS

Instrument Type: Nephelometric turbidity; calibrated in NTUs

Range: 0 to 1100 NTU

Resolution: 0.01 on 0 to 11 range, 0.1 on 11 to 110 range, 1 on 110 to 1100 range

Response Time: 5 seconds

Reading Stability:

Within 1% of final value

Accuracy: 0.05 NTU or $\pm 2\%$ reading below 100 NTU, $\pm 3\%$ above 100 NTU

Display:

3½-digit LCD, Battery and Lamp status

Light Source: Tungsten filament lamp
Sample Chamber: Accepts 25 mm (1") diameter flat-bottom, screw capped, sample tubes

Serial Interface: RS-232

Power: Battery operation: 120V/60 Hz or 220V/50Hz, 100 mA, with included adaptor
