## COMPANY OVERVIEW

A member of the UK based Polypipe Group, Polypipe Ventilation designs and manufactures a full range of high quality ventilation systems for the domestic and light commercial building sectors.

We specialise in supporting specifiers, contractors, developers, installers and operators by providing energy-saving ventilation solutions which meet Building Regulations and save time and money on site. Working with distribution partners, we deliver a high level of customer service which includes support materials, training services, on-line planning tools, telephone and even site-based technical support.

### Our market-leading brands include:

**Silavent**

With over 50 years experience in fan manufacture, the Silavent brand has a well deserved reputation for quality and reliability.

The range includes high performing and energy efficient mechanical extraction products, in a wide range of sizes and configurations to suit every application.

**DOMUS**

The Domus brand symbolises efficient air distribution, with a complete range of ducting, inlets and outlets designed to help customers achieve the highest possible energy efficiency from ventilation appliances. Through Polypipe's investment in premium extrusion and moulding tooling, the Domus range is manufactured to exacting tolerances, which virtually eliminates air leakage and minimises

the pressure drop associated with ducting systems. With the widest range available, installers are able to choose the most efficient duct configuration for any installation. The range is supplemented by sound attenuation and thermal insulation options to help exceed building regulations.

Unique, best in class fire stopping products designed and independently accredited to halt the transfer of fire through compartment walls via duct or conduit systems.

## Support Services

To help our customers meet the stringent requirements of Part F and Part L of the Building Regulations, as well as achieving the higher levels of the Code for Sustainable Homes through improved SAP ratings, Polypipe Ventilation offers a range of support services:

### VSP – Ventilation Solution Provider

Our VSPweb on-line planning system takes the headache out of ventilation specification and can be found at [www.polypipe.com/ventilation](http://www.polypipe.com/ventilation). The VSP system is supported by a network of trained and approved VSP distribution partners, who carry products in stock to support all applications.

## Accredited Domestic Ventilation Training

Regular training courses provided at two UK locations to enable installers to become BPEC accredited Certified Ventilation Installers.

### Technical Support

We are able to provide various levels of technical support to suit every customer application.\*

- Telephone customer hotline: 08443 715523
- Take-offs and ventilation scheduling from customer supplied drawings
- Full ventilation system CAD drawings
- On site technical support

\*Charges may apply.

## Other group products include:

- Above and below ground drainage solutions
- Plastic plumbing systems
- Underfloor heating
- Rainwater harvesting
- Potable water systems
- Geothermal piping systems

Please visit [www.polypipe.com](http://www.polypipe.com) for information on all Polypipe systems.

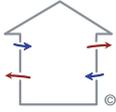

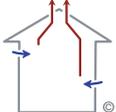

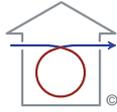

## VENTILATING BUILDINGS IN LINE WITH CURRENT BUILDING REGULATIONS

Greater use of air-tightness and insulation in building construction combined with the moisture created in kitchens and bathrooms has meant that efficient and effective ventilation is now a mandatory requirement of Building Regulations.

Additionally some ventilation technologies offer benefits to house builders and those looking to increase the overall efficiency of the building by qualifying for a benefit to the Dwelling Emission Rate (DER) within SAP.

This page will help you select both the optimum ventilation system and components required to install it.

- 1 **Select ventilation strategy**
- 2 **Select appliance**
- 3 **Select air distribution components**

This document is designed to be read in conjunction with Approved Document of the Building Regulations and the Domestic Ventilation compliance guide.

For a printed copy, download both documents from our website at:

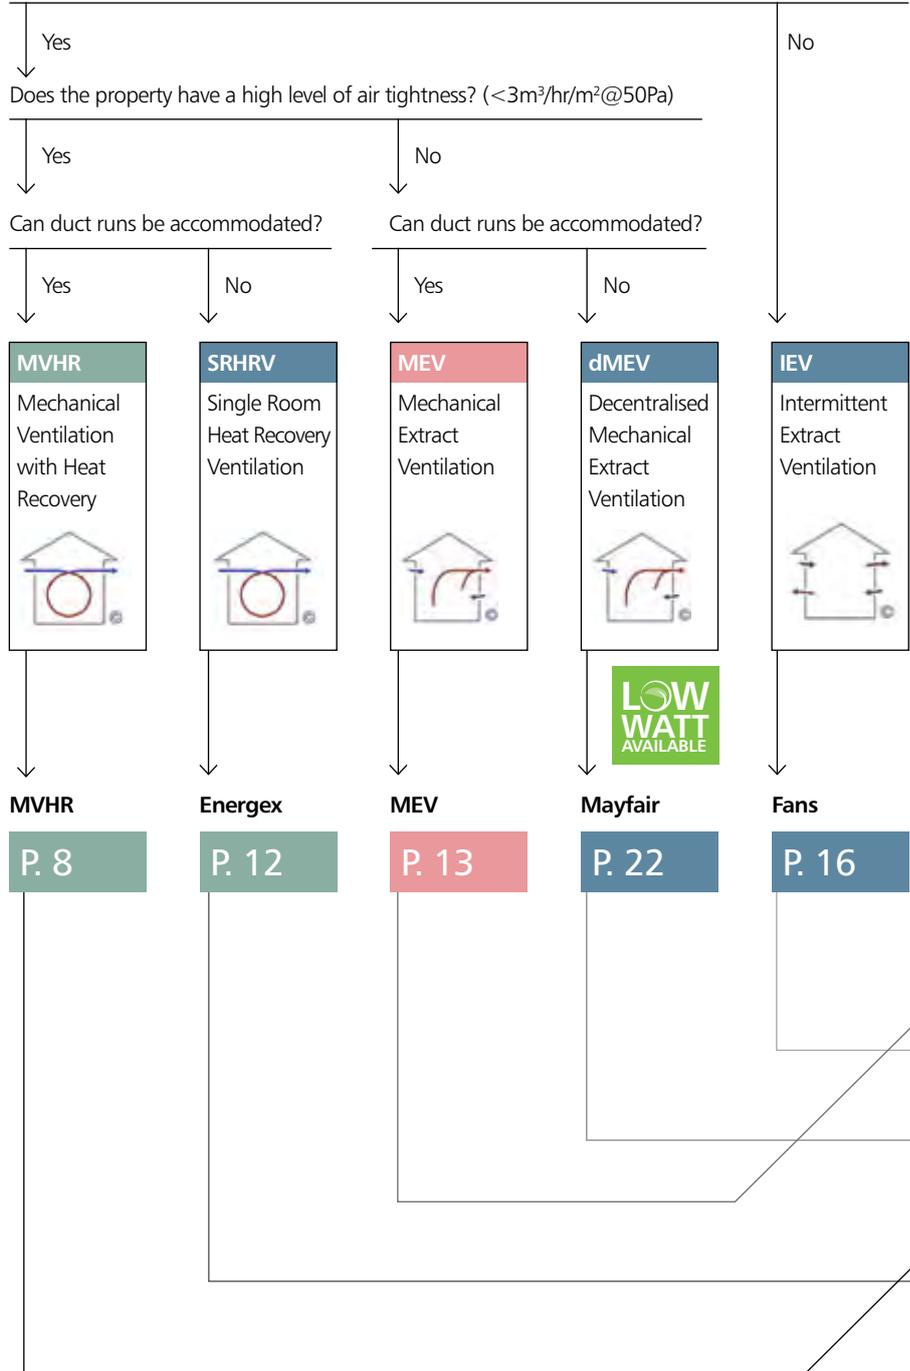

[www.polypipe.com/ventilation](http://www.polypipe.com/ventilation)

**VENTILATION STRATEGY SELECTION** STEP 1

Is dwelling efficiency rate (DER) or energy efficiency important?

New buildings have to conform to target emission rates (TER) laid out in Approved Document L of Building Regulations

Employing energy saving ventilation systems reduces the amount of other efficiency measures required to achieve compliance with Building Regulations.

Mechanical ventilation with heat recovery (MVHR) is most effective when installed in an air-tight dwelling as the effect is not compromised by external leakage.

Central systems (MVHR, MEV) offer higher levels of efficiency, however installation is more complex due to the air distribution systems required.

Background inlet ventilation is required when choosing MEV, dMEV or IEV strategies. Return Air Supply Kits for this purpose are listed on page 76.

# MECHANICAL VENTILATION with HEAT RECOVERY (MVHR)

To ensure the products are appropriate for the intended environment and application, please refer to the application icons at the top of each page.

## Application code:

Kitchen

Utility room

Bathroom

Commercial

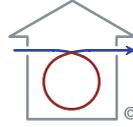

Toilet

Whole house

## SELECTING THE CORRECT HEAT RECOVERY SYSTEM

Polypipe MVHR appliances warm fresh air drawn into the building. Using the heat from stale air extracted from bathrooms and kitchens, MVHR reduces the need for heating.

By very efficiently driving fresh, filtered, oxygenated air around the building, Polypipe MVHR systems significantly improve the living environment.

The Code for Sustainable Homes (CSH) ensures Building Regulations demand the very best energy efficiency from new homes.

|              |      |                               |
|--------------|------|-------------------------------|
| Code level 1 | 2006 | Standard Building Regulations |
| Code level 6 | 2016 | Zero carbon homes             |

Code level 3 is currently mandatory for private new homes and requires a 25% energy saving over homes built to 2006 regulations. Many developments already require level 4, a 44% energy saving. Building fabric is being improved to satisfy current regulations. Dwellings are therefore becoming air-tight and in need of active ventilation.

### Polypipe HR range of mechanical ventilation with heat recovery:

- Reduces fuel consumption
- Helps provide healthy living environments and improved cognitive performance
- Secures additional points towards the Dwelling Emission Rate (DER) required of any new building by Building Regulations.

Summer bypass option is available on all Polypipe HR appliances. It ensures heat is not retained within the home when not required. Of particular benefit to allergy sufferers and those living in urban environments, summer bypass allows cooler outside air in while isolating noise and pollutants.

Modern buildings can lose **25%** of heat due to uncontrolled ventilation and air leakage.

An average bathroom full of moist air contains over 600 watts of heat energy and is exhausted twice every hour. That means **1.2kWh heat is wasted, enough to power a fan heater.**

Polypipe HR appliances can recover more than 92% of this heat directly saving cost and carbon emissions.

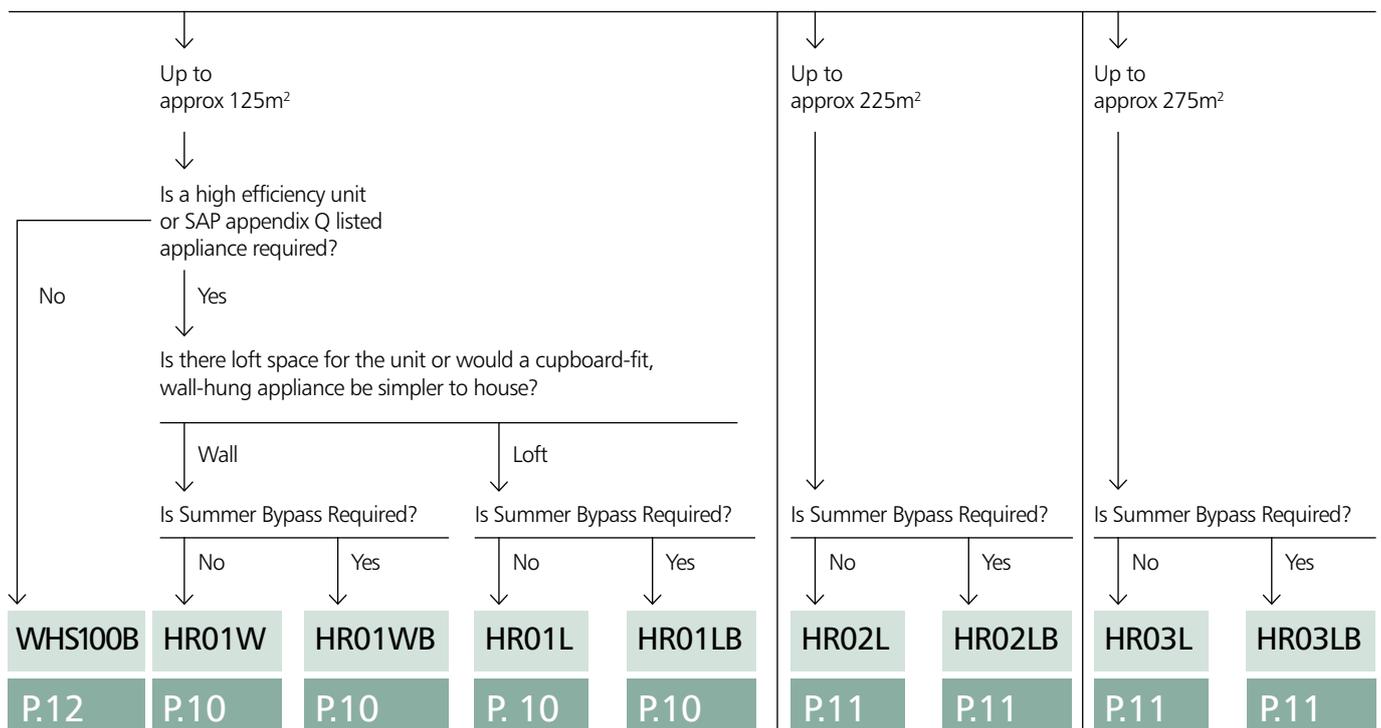

Polypipe HR01, HR02 and HR03 are all SAP appendix Q listed and Energy Saving Trust Compliant.

## Application code:

Kitchen

Utility room

Bathroom

Commercial

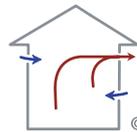

Toilet

Whole house

Silavent MEV systems provide discreet constant low level ventilation through a central appliance. All units are designed to work seamlessly with Domus duct systems.

When installed in line with best practice guidance given in section 3.1 of the Domestic Ventilation Compliance Guide 2010, Silavent MEV systems provide a very efficient and consumer-friendly ventilation strategy.

The domestic ventilation compliance guide is available to download from [www.polypipe.com/ventilation](http://www.polypipe.com/ventilation). For a printed copy, please call 08443 715523 or email [vent.info@polypipe.com](mailto:vent.info@polypipe.com)

All models are available with trickle and boost functions as well as more sophisticated control options to suit the application.

## MEV SELECTOR

### STEP 2

Do you have space to get multiple ventilation ducts to the appliance location?

| Yes                        |                         |                         | No        |
|----------------------------|-------------------------|-------------------------|-----------|
| Floor area of the property |                         |                         |           |
| Up to 125m <sup>2</sup>    | Up to 275m <sup>2</sup> | Up to 400m <sup>2</sup> |           |
| TripleVent                 | QuadVent 600            | QuadVent 750            | Powercube |

## INTERMITTENT EXTRACT FANS

Polypipe offer both Silavent and Domus branded fans including Low Watt versions to suit all applications. Both brands have a superb reputation for reliability and ease of installation.

### There are three main fan types; axial, mixed flow and centrifugal.

Straightforward guidance on the location and installation of intermittent extract fans is given in section 2.1 (p9) of the Domestic Compliance Guide 2010 which can be downloaded from [www.polypipe.com/ventilation](http://www.polypipe.com/ventilation)

or a printed copy requested via email from [vent.info@polypipe.com](mailto:vent.info@polypipe.com)

Alternatively, call 08443 715523 for a copy.

### Notes:

- Using the graphs provided with each fan, ensure the required extract rate can be maintained whilst overcoming duct system resistance
- Ensure both the Voltage and IP rating are appropriate to the electrical safety zone
- Pull cord fans should not be mounted on the ceiling
- Humidistat fans should not be selected for WC applications
- Intermittent Extract Fans require return air supply, return air supply kits are listed on page 76

### Using the coded tables

Where available, add suffix to any basic fan code for a variant, i.e. SELV SDF 100PIR is SDF 100PIRLV, as illustrated in the table below.

| Models available | SELV | Back Draught | SELV & Back Draught | Pull Cord | Timer | Humidistat | PIR |
|------------------|------|--------------|---------------------|-----------|-------|------------|-----|
| Code no.         |      |              |                     |           |       |            |     |
| SDF 100B         | LV   | S            | LVS                 |           |       |            |     |
| SDF 100PB        |      | S            |                     | •         |       |            |     |
| SDF 100TB        | LV   | S            | LVS                 |           | •     |            |     |
| SDF 100HTB       | LV   | S            | LVS                 |           |       | •          |     |

## TECHNICAL TIPS...

- Always ensure that provision has been made for sufficient replacement air in rooms with mechanical extraction
- Always attempt to position supply and extract grilles/valves in the ceiling and as far as possible from the door in order to provide maximum air circulation
- Always insulate ducts installed in cold spaces to avoid condensation forming
- Always seal duct joints to avoid condensate leakage and maintain optimal air-flow

Avoid using flexible hose wherever possible due to its extremely poor air-flow characteristics – use only for short connections if absolutely necessary.

SDF 150

150mm AXIAL FAN

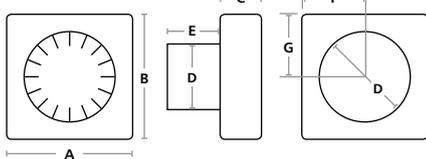

- Window fit option
- 2 speed options
- Available with back draught shutter
- Low voltage shower-fit variants (SELV)

#### Code no. Accessories

|         |  |
|---------|--|
| FLA007A | Back box - Ceiling - Side Entry (Domus 300x25mm) |
| ANC841D | Wall Fitting Kit                                 |

Avoid arbitrarily reducing duct sizes to save cost – this is a false economy as it will create excess noise and may also harm your appliance.

## DOMUS

### 150mm IN LINE MIXED FLOW FAN

|----------|----------------------|
| BK15D    | Flexible Ducting Kit |

**TECHNICAL TIPS...**

- Try to use 45 degree bends in duct systems instead of 90 degree bends as they are up to 3 times more efficient
- Try to avoid too many bends in a duct system as each 90 degree bend approximates 4 metres of rectangular duct or 10 metres of round
- Where space is available use circular rigid duct for greater efficiency
- Avoid using flexible hose wherever possible due to its extremely poor air-flow characteristics – use only for short connections if absolutely necessary

## ACOUSTIC ATTENUATING VENTILATION PRODUCTS

Ideal for urban, high traffic or security applications, Freshflo acoustic ventilators ensure that the acoustic insulation and security levels provided by specialist glazing are not undermined by ventilation provision.

- Effective acoustic isolation
- Variable ventilation rates remove the need for opening windows
- Enables increased building security
- Gloss white finish available to match radiators and panel heaters
- Reduces humidity and condensation
- Maintenance-free self-lubricating motor

Freshflo ventilators can be installed independently in each habitable room and provide variable ventilation rates which exceed the requirements of Approved Document F of Building Regulations.

As replenishment air for ventilation or open-flue combustion appliances, units can be employed singularly or in multiples, dependant on the application. Freshflo models can be surface mounted or flush fitted into the wall.

### Freshflo installation service available

Also available as part of the Silavent installed acoustic package:

- Secondary glazing
- Replacement windows
- Encapsulated venetian blinds with Bowen remote tilt rod

Please contact us on **08443 715523** for further details on Silavent Environmental Services.

## COMBINED VENTILATOR

### SM2/C

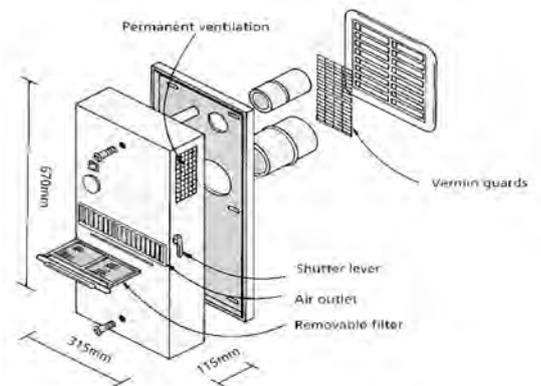

- Flying lead and plug supplied
- Average noise reduction of 35dB(A)
- Self lubricating motor
- Cowl terminal available

### Technical data

| Description                         | SM2/C  |

**FAN CONTROLS**

- For fans designed for remote switch operation
- In keeping with conventional wall furniture
- Comply with relevant EMC directives
- All remote controllers can be flush or surface mounted using a standard single pattress box

**ANC 108A**

**OVERRUN TIMER**

Adjustable time delay between 2-25 minutes after the room has been vacated

W 89mm H 89mm D 54mm\*

5 amps

**ANC802A**

**HUMIDISTAT WITH OVERRUN TIMER**

More sensitive than traditional humidistat controls, Intelligent Humidity Control (IHC) identifies a significant change in humidity. Timer adjustable between 2-25 minutes

W 89mm H 89mm D 54mm\*

5 amps

**ANC808A**

**HUMIDISTAT WITH PULL CORD SWITCH**

More sensitive than traditional humidistat controls, Intelligent Humidity Control (IHC) identifies a significant change in humidity. Neon indicator and Pull cord override.

W 89mm H 89mm D 54mm\*

5 amps

**ANC 831A**

**HEAVY DUTY POWER FILTER**

Recommended when fans containing electronic controls are used in conjunction with fluorescent lamps or in other situations when power pulses (spikes) are frequent

W 86mm H 86mm D 19mm\*

3 amps

**ANC812A**

**TWO SPEED ROCKER SWITCH**

Provides two speed operation for twin speed fans

W 89mm H 89mm D 54mm\*

5 amps

**ANC813A**

**PIR SWITCH WITH OVERRUN TIMER**

Activates by detecting body heat. Detection area up to 5 metres. Timer adjustable between 2-25 minutes

W 89mm H 89mm D 54mm\*

5 amps

**ANC833A**

**VARIABLE SPEED CONTROLLER**

Provides on/off and variable speed control

W 89mm H 89mm D 54mm\*

1 amp

**ANC814AHD**

**HEAVY DUTY VARIABLE SPEED CONTROLLER**

Provides on/off and variable speed control for single speed fans

W 89mm H 89mm D 54mm\*

2 amps

\*Note: D - 54mm includes 35mm surface mounted pattress box (supplied).

Whole house

## AIR DISTRIBUTION

Polypipe Ventilation's Domus duct range is available in 8 different profiles to suit any application.

The market leading brand in domestic ventilation ducting, the Domus range is also the widest and highest quality, with a full set of adapters to enable a simple or complex system, as required.

Performance data is available to enable specifiers to calculate and match appliance pressure to system resistance and ensure correct operation.

Use this selector to determine the correct duct system for individual fans and the main trunk duct for central ventilation systems.

Within a whole house system, branches can be installed with duct profiles appropriate to the requirements of the individual air valve, however to ensure the system can be balanced, most installations specify one profile throughout the system.

To change system, adapters are listed on page 73.

### Tips

To ensure appliance efficiency and reduce any system noise:

- Choose the shortest and most direct routes
- Minimise the use of bends and use 2 x 45° instead of 90° bends wherever possible
- Seal joints
- Use rigid round duct wherever possible
- Use the largest appropriate size of duct
- Avoid using flexible hose wherever possible
- Check the extraction capability and connection

## DUCT SELECTION

## STEP 3

Appliance duct connection size

| 100mm (4")                            |                           |                        | 125mm (5")                            |                           |                        | 150mm (6")                            |                        |

| 38-60mm                               | 60-105mm                  | 105mm                  | 38-65mm                               | 65-130mm                  | 130mm                  | 97-155mm                              | 155mm                  |
| <b>Domus<br/>234x29mm</b>             | <b>Domus<br/>110x54mm</b> | <b>Domus<br/>100mm</b> | <b>Domus<br/>308x29mm</b>             | <b>Domus<br/>204x60mm</b> | <b>Domus<br/>125mm</b> | <b>Domus<br/>220x90mm</b>             | <b>Domus<br/>150mm</b> |
| <b>P.51</b>                           | <b>P.40</b>               | <b>P.57</b>            | <b>P.54</b>                           | <b>P.44</b>               | <b>P.63</b>            | <b>P.48</b>                           | <b>P.68</b>            |

Once a profile has been specified and the duct layout designed, the duct system resistance must be calculated to ensure that the appliance has sufficient power to more than match the resistance of the complete system.

Straightforward guidance on the layout and installation of duct systems is given in the Domestic Compliance Guide 2010, which accompanies Approved Document F of Building Regulations and can be downloaded from [www.polypipe.com/ventilation](http://www.polypipe.com/ventilation) or a printed copy requested from [vent.info@polypipe.com](mailto:vent.info@polypipe.com) or 08443 715523.

### Note:

All components are listed with one of three connection profiles;

- M** Male, the fitting will fit inside duct
- F** Female, the fitting will fit around duct
- D** Duct, the connection profile is the same as the duct and may need a Female or Male straight connector to couple to duct

DUCT  
SILENCER

- Significantly reduces transmitted appliance noise and room-to-room cross-talk
- Excellent sound attenuating properties verified by the Sound Research Laboratory
- Facilitates user acceptance of continuous running of energy-efficient central ventilation systems
- Enables compliance with Building Regulations
- Low profile increases installation options when compared to traditional solutions
- Corrosion-proof, lightweight and easy to install
- Contains Microban antimicrobial additive to ensure the ventilation system remains fresh for the lifetime of the system
- European-wide protected design
- Available in three lengths

## TECHNICAL TIPS...

- Always insulate ducts installed in cold spaces to avoid condensation forming inside
- Remember to specify FireBrake products where duct is installed through fire compartment walls. Patented Firebrake offers 2 hours fire protection, and is available as part of all Domus duct systems
- Where space is available use circular rigid duct for greater efficiency
- Did you know that the installation of condensation traps is recommended in both Building Regulations and NHBC Standards? If you would like to read more on Polypipe's Condensation Traps then please go to pages 58, 64 and 69 or call 08443 715523.

## Condensation trap pipe combinations

Code: 497

Code: 5697

All dimensions shown in mm

Note: 125mm installations - exit the trap using 150mm ventilation pipe or 160mm soil pipe in order to reduce air flow resistance.

Pre-boxed kits of standard duct and terminal components are available for the following applications:

### Background Ventilators

For use with Intermittent Extract and MEV systems.

Selecting the correct specification of background ventilation is explained in section 5 of Approved Document F of Building Regulations (p19).

Approved Document F can be downloaded from [www.polypipe.com/ventilation](http://www.polypipe.com/ventilation) or a printed copy requested from [vent.info@polypipe.com](mailto:vent.info@polypipe.com) or 08443 715523.

### General guidance

Background ventilators should be located to avoid draughts, typically 1.7 m above floor level.

Background ventilators should be located in all rooms with external walls.

- At least 5000mm<sup>2</sup> total equivalent area of ventilation should be provided in each habitable room and 2500mm<sup>2</sup> equivalent area in each wet room
- For rooms with no external walls, detailed guidance is given in paragraphs 5.14 to 5.16 of Approved Document F

### Cooker hood extraction

Cooker hood kits consist of rectangular duct so that they can be concealed when installed above kitchen cabinets.

To determine which cooker hood kit is required, select the kit with the appropriate connection for the appliance exhaust spigot.

### Tumble dryer extraction

To determine which tumble dryer kit is required, select the kit with the appropriate connection for the appliance exhaust spigot.

Kits are available with different terminal colours. Where kit terminals are available in different colours, the component code is marked with an asterisk (\*).

† 2706 (Equivalent area 2857 mm<sup>2</sup>)  
7.1l/s @ 10Pa Exhaust Air Heat Pump Specific

## SUPPORT SERVICES

To help our customers meet the stringent requirements of Part F and Part L of the Building Regulations, as well as to achieve the higher levels of the Code for Sustainable Homes through improved SAP ratings, Polypipe Ventilation offers a range of support services:

### VSP - Ventilation Solution Provider Page 80

On-line system planner and approved distributor scheme

### Domestic Ventilation Training Page 82

 accredited training to 2010 Building Regulations

### Customer Technical Support

Technical support to suit every customer application\*.

Polypipe Ventilation are committed in providing the highest level of technical support to our customers, from a hotline for customer queries, bespoke CAD drawings of ventilation systems, through to offering on-site assistance by one of our Technical Support Engineers.

**Telephone customer hotline: 08443 715523**

\*Charges may apply.

Approved Document B of the Building Regulations states that when a compartment wall is penetrated an approved fire-stopping device should be installed. Polypipe's FireBrake is available for all Domus duct systems and prevents the spread of fire through your ventilation system.

## LEAVE THE VENTILATION SPECIFICATION TO US...

To simplify central ventilation system specification, Polypipe's VSPweb On-line planner gives customers the opportunity to easily select a duct system and appliance based on their household requirements. Distribution partners have the opportunity to join our unique scheme and become an officially recognised VSP supplier, receiving training to current building regulations, merchandising and sales support.

### How it works

#### Step 1

1

Tell us about your property

#### Step 2

2

Select your appliance

#### Step 2

3

A Polypipe duct pack is recommended. The pack will include the most suitable duct, fittings and where selected a Polypipe heat recovery appliance specific to your property. This will ensure that the system operates at its optimum efficiency.

Duct packs are available to order from our national network of approved Ventilation Solution Providers (VSP); to locate your nearest VSP distributor please call 08443 715523.

### Criteria for appliance and duct pack selection

With increasingly stringent building regulations and energy efficiency targets, the VSPweb On-line Planner acts as a support tool when specifying central ventilation, removing any confusion or uncertainty.

### Criteria for appliance selection

The VSP Planner provides a bespoke duct system to match the chosen appliance. Either manually select the appliance from the SAP Appendix Q database or allow the planner to specify the most appropriate units available.

Recommendations are based on a combination of the highest heat exchanger efficiencies and the lowest specific fan power at flow rates demanded by the dwelling specified.

Calculations are based on the performance of Energy Saving Trust approved appliances and formulas given in Approved Document F of the England and Wales Building Regulations or advice given in Building (Scotland) Regulations 2010; along with the house data you input into the software.

Polypipe's HR heat recovery appliances are SAP Appendix Q registered and EST Best Practice Compliant. They significantly increase quality of life within the home by delivering fresh, oxygenated, pre-warmed and filtered air into the living areas. Correctly specified Domus duct systems enable efficient and quiet appliance operation.

### Criteria for duct selection

Using the information you provide about the property and the selected appliance, a duct pack is specified to match the number of inhabitants, size and the type of property, also taking into account the installation and termination location of the appliance and average room sizes based on current building practice.

Efficient air-flow is dependant on duct size, high surface finish and air-tight distribution.

To achieve this, consistent profiles, tight tolerances and accurate mouldings are all essential. Polypipe consider quality of utmost importance and this is reflected in the Domus duct systems.

To locate your nearest VSP supplier, please email your enquiry to [vent.sales@polypipe.com](mailto:vent.sales@polypipe.com) or alternatively contact customer services on 08443 715523. Distributor partners interested in upgrading to become a VSP supplier should contact their local Regional Sales Manager or Customer Services on the number above.

To achieve the best possible SAP rating and guarantee air quality in well insulated homes, Polypipe recommends our EST best practice compliant whole house MVHR, see page 9.

### General guidance

Every effort is taken to ensure that the information provided is both up-to-date and accurate. It remains the responsibility of the installer to check that both the duct system installation and the appliance are suitable to the application. All VSP packs are designed to provide a complete solution. In rare instances additional components may be required from the extensive Domus range.

Additional assistance is available from Polypipe's Technical Support team. Please call 08443 715523.

## VENTILATION INSTALLER TRAINING

ACCREDITED BY **bpec**

### Become a BPEC accredited Certified Ventilation Installer

This Ventilation Installer Training course provides installers with the opportunity to learn new skills and increase their scope of work.

#### Why should you be qualified now?

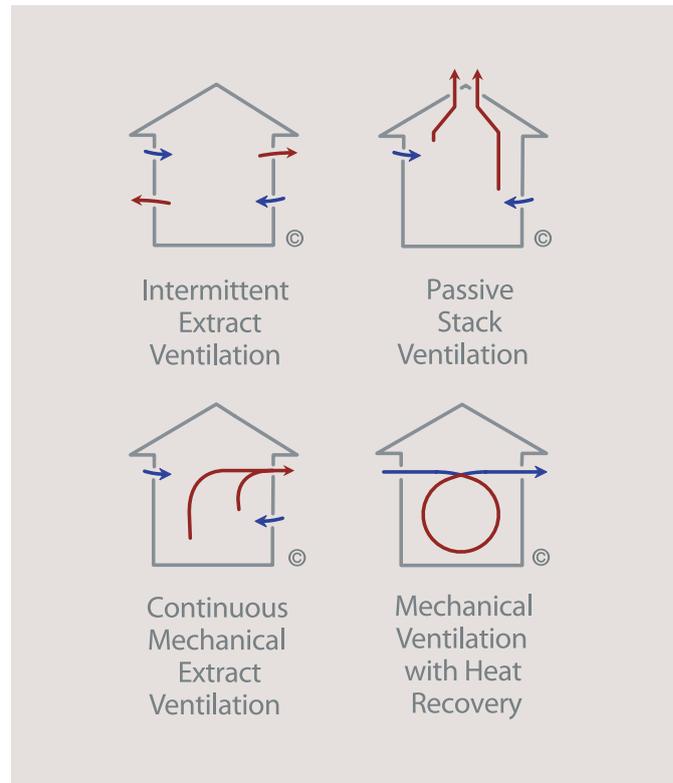

Domestic ventilation became 'Notifiable Work' on 1st October 2010 as part of the 2010 revision to Approved Document F of the Building Regulations. This means ventilation provision in new homes must be commissioned by a suitably qualified person.

The changes to these regulations essentially create a new vocation - Domestic Ventilation Installer, for which there has been no specific qualification until now.

To ensure installers are qualified to complete domestic ventilation installation, commissioning and hand-over, Polypipe Ventilation have written and launched the first industry-recognised accredited training program. The content of the course conforms to the requirements of Summit Skills new syllabus for ventilation and has been independently assessed by Ian Andrews Associates.

The course is accredited by independent training company BPEC, an industry recognised training and certification provider which already provides ACS, OFTEC, ECS and other renewable certification.

The new Domestic Ventilation course provides significant opportunity for allied trades to take on additional skills and increase their scope of work.

#### Who is the course applicable to?

- M&E Contractors
- Plumbing & Heating Contractors/Engineers
- Electricians ■ Specialist Wholesaler & Merchant Staff
- Students & Apprentices ■ Building Control

#### What are the training course objectives?

The objectives of this training course are to enable delegates to:

- Install any of the common types of Domestic Ventilation Systems in the UK safely and efficiently
- Inspect and test any of the common types of Domestic Ventilation Systems in the UK
- Commission and provide information for any of the common types of Domestic Ventilation Systems in the UK

### CM01 COMMISSIONING METER

CM01 is a hand-held digital rotating vane anemometer used for air velocity and volumetric flow measurements. Simple to use, the CM01 enables the commissioning and inspection of all types of ventilation system performance, by providing accurate and reliable readings every time.

- Measures velocity and temperature
- Calculates volumetric flow rate
- Supplied with large format flow hood, and carry cases
- UKAS approved calibration certificate
- Light weight, robust and simple to use

Requires 4x AA batteries (included)

### What is covered?

The syllabus covers the majority of existing types of Domestic Ventilation Systems that an Installer in the UK is likely to come across. The course emphasises the most common systems and configurations that most tradespeople are likely to encounter. Less common systems are also covered, but to a lesser extent.

Due to time constraints, the syllabus does not aim to cover material that should already be known to plumbing, heating and electrical engineers. Repetition of existing knowledge is only likely to occur in areas which are regarded as critical, including legal and safety issues.

### What prerequisite knowledge is needed?

The training/assessment course is targeted at candidates with the following background:

- Candidates with a number of years' experience in plumbing, heating or electrical engineering
- Candidates who hold a formal qualification at NVQ Level 3 in plumbing, heating or electrical engineering
- Candidates who are currently undertaking a course in plumbing, heating or electrical engineering, which will lead to a formal qualification such as NVQ Level 3 in plumbing, heating or electrical engineering

### Course Duration, Content and Assessment

The training and assessment course will run over two days and will include both theoretical training and practical exercises.

At the end of the course, there is a multiple choice assessment that each individual candidate needs to pass. The assessment is open book.

#### Day 1

- Background and Building Regulations
- Course aims and objectives
- MODULE 1: Domestic ventilation in context
- MODULE 2: Air flow requirements and calculations
- MODULE 3: Health and Safety

#### Day 2

- MODULE 4: Installation, inspection, testing, commissioning and provision of information
- Commissioning workshop and assessment
- Examination

Did you know that the Silavent range includes energy saving Low Watt fans? See page 21-22 or call 08443 715523.

### Training Centres

The Ventilation Installer Training course is available at a choice of two locations:

- Polypipe's Centre of Excellence, Aylesford, Kent
- Polypipe Training Facilities, Neale Road, Doncaster

Polypipe's Centre of Excellence, Aylesford, Kent

### Course Availability

Courses are run on two consecutive days at both training centres regularly throughout the year.

### Accommodation

Accommodation is available locally at preferential rates for course attendees.

### Course Includes:

- BPEC manual
- All necessary training materials
- Cold buffet lunch and refreshments both days
- Qualification and van stickers upon successful completion

### Payment

Courses can be purchased for over the counter at Polypipe Ventilation distributors or directly.

To book through a distributor, please place an order for code DVT2010. The distributor will then supply a voucher with a unique code which can be redeemed within three months by making a booking on the number below.

To book direct, please call Polypipe Ventilation on 08443 715523 or visit [www.polypipe.com/installertraining](http://www.polypipe.com/installertraining)

## GLOSSARY

**ACH** - Air changes per hour. The number of times the volume of air in a room needs to be changed in one hour depending on the activity in that space. Normally given as a range e.g. 15-20 ach; based on the level of usage.

**Axial fans** are suitable for low pressure applications, where duct runs are short.

**Branch** – A section of a duct system serving only one or two inlets or outlets.

**Centrifugal**, also known as radial fans, deliver the pressure needed to propel air through long duct runs.

**dB(A)@3m** Decibel, unit of sound measurement based on pressure at 3m away from the source

P17 of the Approved Document F of Building regulations recommends sound levels from whole house ventilation systems not exceed 30 dB(A) levels within bedrooms and living rooms.

### Duct System Resistance

The total resistance of the duct system can be calculated by simply adding up the resistance of each component at a specific air-flow rate. Each product within the Domus range has a measured resistance value for the main UK Building Regulation extract flow rates. These figures are detailed within this catalogue. Where whole house systems are being designed, the pressure losses at the flow rate of each specific spur must be added together.

**CIBSE Guide B, 2005** recommends extract rates are calculated by multiplying the volume of the room (m<sup>3</sup>) by the following air changes per hour (ACH). This rate should always be greater than Building Regulations minimum requirements.

|--------------------------------|------------------------------|
| Bathrooms 6 – 8                | Launderettes 10 -15          |
| Bedrooms 2 – 4                 | Laundries 10 -15             |
| Billiard Rooms 6 – 8           | Lecture Theatres 6 -10       |
| Cafés & Coffee Bars 10 -15     | Libraries 3 - 4              |
| Canteens 8 -12                 | Living Rooms 4 - 6           |
| Cellars 3 -10                  | Offices 4-6                  |
| Club Rooms 8 -10               | Photo & X-ray Darkrooms 6 -8 |
| Conference Rooms 6 -10         | Public House Bars 6-8        |
| Entrance Halls, Corridors 3 -5 | Restaurants 10-15            |
| Factories & Workshops 6 -10    | Shops & Supermarkets 8-10    |
| Garages 6 -10                  | Shower / Bathrooms 15 -20    |
| Gymnasiums 6                   | Stores & Warehouses 3-6      |
| Hairdressing Salons 10 - 15    | Toilets (Public) 5+          |
| Hotel Bars 6 -10               | Toilets (Domestic) 6-10      |
| Kitchens (Domestic) 10 - 15    | Utility Rooms 15-20          |
| Laboratories 4 – 15            |                              |

**Extract Rates** are given in Table 5.1a and 5.1b of Approved Document F of Building Regulations 2010 which can be downloaded from [www.polypipe.com](http://www.polypipe.com) or a printed copy requested from [vent.info@polypipe.com](mailto:vent.info@polypipe.com) or 08443 715523.

### Electrical Safety Zones

Section 701 of British Standard 7671:2008 defines four bathrooms and shower room zones:

| Zone               | Description  | Permitted Voltage  | Min IP  |
|--------------------|--|--|---|
| Zone 0:            | Cuboid volume that contains the bathtub, shower or basin   | none   | none  |
| Zone 1:            | Area above Zone 0 up to a height of 2.25m above the floor  | Separated extra low voltage (SELV) with transformer located outside Zone 2 | none  |
| Zone 2:            | Area above Zone 1 up to a height of 3m, as well as the area that is horizontally within 0.6m from Zone 1 | any  | X4 protection against splashing water from all directions |
| Outside the Zones: | Includes any space under the bath or shower that can only be accessed with a tool                        | any  | any   |

Fans with humidity controls and PIRs should not be located within splash Zone 1

**Humidistat** – A switched control that triggers the appliance once a set level of humidity is reached.

**IEE Wiring Regulations** - Publication of the Institute of Electrical Engineers. Also known as BS 7671.

**IP Rating** - Classification of degrees of protection for an electrical product developed by CENELEC. First digit describes degree of protection from solids, the second from liquids. Examples: IP44.

**l/s** – Litres per second - Measurement of volume flow.

$l/s = m^3/h \div 3.6$

**m<sup>3</sup>/h** – Cubic metres per hour - Measurement of volume flow.

$m^3/h = l/s \times 3.6$

**Mixed flow** fans combine elements of axial and centrifugal and are therefore appropriate for medium length duct runs.

**Pa** – Pascal, unit of pressure for measuring system resistance or static pressure.

**PIR** – Passive infrared sensor, detects movement and is used to trigger appliances.

**RH** - Relative humidity. The ratio of the amount of water in the air at a given temperature.

- Outside humidity levels are usually between 60-70%RH

- The target for Indoor levels is normally between 40-60%

**SELV** - Separated Extra Low Voltage, used to describe fans operating at less than 25V.

**Temperature** – The metric measurement of which is Centigrade (or Celsius).

**Thermal Overload Protection** - A safety component designed to interrupt the current to a motor before the windings exceed their design operating temperature.

**Trunk** – The section of a duct system carrying the maximum flow of air to or from the appliance.

**Watts** – Measure of electrical power.

## INDEX

| Product Code | Box Qty | Product Group | Page                           |
|--------------|---------|---------------|--------------------------------|
