

Falk™ Omnibox® Worm Gear Drives

The Right Quality, The Right
Performance (English-Inch)

REXNORD

FALK™ OMNIBOX®

The High-Performance Choice for all Your Applications

When it comes to winning solutions to your right angle, small worm gear drive challenges, Omnibox has it all.

Omnibox incorporates our best durability and reliability features into one competitively priced product line.

Over 475,000 configurations mean there's one that's precisely right for virtually every application.

And Omnibox delivers all this quality and performance in a package that offers drop-in convenience for minimal downtime.

Omnibox Truly is the Best of the Best

- Sizes: 1.33" through 10" centers
- Output speeds: .25 through 350 RPM
- Solid or hollow alloy-steel shafts
- Single or double ended outputs
- NEMA and IEC motor flanges
- Single reduction drives or double reduction drives in helical-worm or worm-worm configurations

No Leaks

Omnibox is all about long life and low operating costs. Viton® Double Lip Seals, standard, deliver increased resistance to high temperature, abrasion and chemicals.

O-rings on input and output covers eliminate gaskets and silicone sealants that are prone to leaks. And the entire system is 100% run and leak tested.

Plus, a quill seal guard helps prevent input seal damage during motor installation. So Omnibox protects your investment right from the start.

Tough, Winning Performance

For top performance even in extreme work environments, Omnibox drives feature the strength and rigidity of cast iron housings. High-strength steel output shafts resist failure from starting and stopping torque, shock loads and fatigue, while low-speed, heavy-duty tapered roller bearings withstand high overhung and thrust loads.

Quiet, Smooth Operation

The true measure of a champion is the ability to consistently deliver over time. Our non-compressible metal shims maintain factory bearing settings and gear alignment

throughout the life of the drive. The single cover output design ensures gear centering for maximum efficiency, with minimal noise levels.

In addition, chill-cast bronze gears help assure long, trouble-free life and quality operation. And hardened and precision ground worms feature high helix angles to provide the ultimate in efficiency and torque capacity.

Special Application Drives

Our extensive product offering means Omnibox can meet your highly specialized drive needs, too. For example, where a sealed drive is essential, our Pressure

equalizing system assures long life with low maintenance. Stainless steel drives are available for harsh-duty environments.

And BISSC Certified drives accommodate the wash-down requirements of the food, chemical and pharmaceutical industries.

Fast Answers; Fast Delivery

Local availability from Rexnord's extensive Distributor network and modular designs allow quick turnaround and delivery. Drop-in convenience helps further reduce your downtime. And our dedicated Small Drives Center assures prompt response to all your small drive service and support needs.

Omnibox Selection Guide

Selection Guide 271-108, November 2000

Table of Contents

Omnibox General Information

Basic Information	6
Conditions Affecting Selection	7
How to Select and Order — Quick Selection Method	8
Drive Nomenclature	9

Non-Preferred Mounting Positions	143
Double Input Shafts	144

Reference Notes

* Refer to Page 143 for Omnibox Non-Preferred Mounting Positions.

- ‡ Refer to multiple chain, sprocket, and pinion mounted applications to Factory for Deflection Analysis.
- ▼ For Sizes 1700-11000, Primary Drive has hollow output shaft and Secondary input shaft is solid.
- ★ Drives are for horizontal operation unless specifically stated otherwise. Consult Factory for other mountings. Dimensions are for reference only and are subject to change without notice unless certified.
- Dimension "M" is the usable shaft extension length.
- ◆ Dimensions "O" & "OA" are the usable shaft extension lengths.
- Refer to Pages 138 and 139 for other bushing and L.S. shaft bores.
- * Metric motor flanges are available in Types WBM, WOM, WUM, WXW, WJM, WLM, WBWM, WOWM, WUWM, WXWM, WJWM, WLWM, WRM, WRWM, & WPM only.
- ▲ For Size 1133, a second set of foundation holes are furnished, located as follows: F = 3.31", G = 1.66".
- ♣ BD = 5.88" on Sizes 1133 through 1206 quill-style WBHM, WBHQ, WOHM, WOHQ, WUHM, WUHQ, WXHM, WXHQ, WJHM, WJHQ, WLHM, & WLHQ drives.
- § Dimension "YA" is thickness of shims required under drive to permit helical head to clear foundation by .25 inches. Add "YA" to dimensions "D" & "V". Shims by purchaser.
- ♥ For Assemblies 3, 7, 11, 16, 19, 23, 27, 31, 43, & 47, dimension "YA" is the thickness of shims required under drive to permit helical head to clear the foundation by .25 inches. Add "YA" dimension to dimension "V". Shims by purchaser.
- ♠ Dimension "BD" for Size 1, Type HPF with Size 48C frame is 3.85"; Size 56C frame is 6.50".
- ⊛ Size 1, Type HPM with Size 48C frame: "BF" holes are rotated 45°.
- ♣ Must be Factory Assembled. Kit not available.

Basic Information

Safety Notes

Falk Gear Drives The Falk and Rexnord name on the gear drive is the purchaser's assurance that the drive was engineered, rated and manufactured to sound design practices.

The power supplied to the geared drive must be equal to or less than the power for which the drive was selected using the appropriate service factor for the application. The customer must also assume the responsibility of isolating the geared drive from any vibratory or transient load induced by the driven equipment.

Install and operate Rexnord products in conformance with applicable local and national safety codes and per Rexnord installation manuals which are shipped with gear drives and are also available upon request. Suitable guards for rotating members may be purchased from Rexnord as optional accessories. Consult your local Rexnord Representative for complete details.

People Conveying Equipment Selection of Rexnord gear drives for applications whose primary purpose is the transportation of people is not approved. This includes such applications as freight or passenger elevators, escalators, man lift platforms, and ski tows and ski lifts.

If the primary purpose of the application is material conveyance and occasionally people are transported, the Rexnord warranty may remain in effect provided the design and load conditions are not exceeded and certification to the appropriate safety codes and load conditions has been obtained by the system designer or end user from the appropriate enforcement authorities.

Gear Drive Ratings

All gear drive ratings in this selection guide allow 100% overload for starting loads and momentary overloads for electric motor driven applications operating ten hours per day under uniform conditions (unity service factor). For other conditions, compute an equivalent power by multiplying the actual power required for the application by the appropriate service factor.

Gear Drive Identification Tables in this selection guide identify gear drives by size, type and ratio. See Drive Identification Page 8.

Horsepower & Torque Drive mechanical horsepower and torque ratings are tabulated in the selection guide to permit selections for specific application requirements. NOTE: Drives may be selected using the Quick Selection tables under most circumstances. Refer to those tables starting on Page 23 for selection guidelines.

Stored & Inactive Gear Drive Each drive is protected with rust preventive that will protect parts against rust for a period of 6 months in an indoor dry shelter.

Sizes 1133 through 1600 — If a drive is to be stored, or is inactive after installation beyond the above periods, drain oil from housing and spray all internal parts with a rust preventive oil that is soluble in lubricating oil or add "Motorstor" J vapor phase rust inhibitor at the rate of one ounce per cubic foot of internal drive space (or 5% of sump capacity) and rotate the shafts several times by hand. Before operating, drives which have been stored or inactive must be filled to the proper level with oil meeting the specifications given in Manual 278-109.

Periodically inspect stored or inactive gear drives and spray or add rust inhibitor every six months, or more often if necessary. Indoor dry storage is recommended.

Drives ordered for extended storage can be treated at the Factory with a special preservative and sealed to rust-proof parts for periods longer than those cited previously.

Factory Warranty Falk products generally carry a limited, 1.5 year warranty against defects in materials or workmanship; but, for an actual statement of the Factory Warranty, or a Falk/Rexnord Distributor for our Standard Conditions of Sale, refer to the Factory.

Conditions Affecting Selection

Non-Standard Application Procedures

The following conditions may affect the Omnibox gear drive selection procedure, drive size, and auxiliary equipment being furnished.

Excessive Overloads The maximum momentary or starting load must not exceed 200% of rated load (100% overload). Rated load is defined as gear drive rating with a service factor of 1.0. If the maximum starting or momentary load exceeds the above conditions, compute a second equivalent power rating by dividing the peak load by two. The gear drive selected must have capacity equal to, or in excess of, the larger equivalent power rating.

Reversing Service Applications involving either more than 20 reversals per ten hour period, or less than 20 reversals per ten hour period with peak torques greater than 200% of normal load must be referred to Factory.

Brake Equipped Applications When a gear drive is equipped with a "working" brake that is used to decelerate the motion of the system and the brake is located between the prime mover and the gear drive, select the drive based on the brake rating or the highest equivalent power rating, whichever is greater. If the brake is used for holding only and is applied after the motion of the system has come to rest, the brake rating must be less than 200% of the catalog rating, refer the application to Factory. Also refer to Factory all applications in which the brake is located on the output shaft of the gear drive.

Oversized Prime Mover Published service factors do not cover applications that require oversize prime movers for high energy or peak loads. Refer such applications to Factory for selection of suitable drives.

Speed Variation Gear drives offered in this Selection Guide are designed to operate with splash lubrication at all speeds for which they are catalogued, provided the appropriate amount of lubricant is present based on the drive mounting position. (Refer to Manual 278-109 for oil quantity associated with each gear drive mounting position). Variation of speed between cataloged speeds, or at speeds falling between cataloged speeds, is permissible.

Different oil levels are necessary for various drive sizes, speeds and ratios. Consequently, to operate an existing drive at different speeds from those shown on the nameplate, full application and nameplate information must be referred to Falk for review of the lubrication system.

Lubrication of Sizes 1133 to 1600 These sizes are furnished filled with a quantity of oil. Quantity of oil furnished is based on the customer identified drive mounting position stated at the time of order. Standard drive mounting positions are shown on Pages 14-19 of this selection guide. Standard oil furnished with the gear drive is a petroleum based lubricant conforming to AGMA Viscosity Grade 7C, ISO Viscosity Grade 460, and no further lubrication of the gear drive is required upon start-up unless otherwise specified.

Lubrication of Sizes 1700 to 11000 These sizes are furnished without oil. Customer oil fill is required. These sizes are furnished with oil fill plug, oil drain plug, and vent plug. Lubricant quantity lubricant specifications, location of plugs, and recommended oil change frequency are stated in the Installation & Maintenance Guide 278-109.

For Quadrive primaries, refer to Manual 378-101 for lubricant recommendations. Refer to Manual 278-109 for secondary lubricant recommendations.

Effects of Solar Energy If a drive operates in the sun at ambient temperatures over 100°F (38°C), then special measures must be taken to protect the drive from solar energy. This protection can consist of a canopy over the drive or reflective paint on the drive. If neither is possible, additional cooling may be required, such as shaft fans, electric fans, cooling tubes, or heat exchangers.

Overhung Loads & Thrust Loads The overhung load and thrust load ratings published in this selection guide are based on a service factor of unity and a combination of the most unfavorable conditions of rotation, speed, direction of applied load and drive loading. If the calculated load exceeds the published value, or if an overhung load and thrust load are applied simultaneously to a shaft, refer complete application information to Factory.

How to Select and Order

Quick Selection Method

1. Determine Service Factor — Pages 10 and 11.
2. Determine Required Input Horsepower — Calculate the equivalent hp by multiplying the motor hp by the Service Factor.
3. Determine Driver Output Speed and Ratio.
4. Select Drive Type and Size — Refer to Pages 14 through 19 and select the desired drive configuration. Then refer to Pages 22 through 27 (Single Reduction), Pages 52 through 57 (Double Reduction, Worm-Worm), or Pages 82 through 85 (Double Reduction, Helical Worm) and select the drive size. Locate the table containing required ratio, low speed shaft rpm and select the drive size with a mechanical rating equal to or exceeding the equivalent hp requirement.
5. Check Overhung Load — Refer to Tables on Page 13 that provide the overhung load capacities of the gear drives. If an overhung load is present (input or output), calculate the value of the load per instructions on Page 12. Sprockets or other power takeoff devices mounted on the input or output shaft of the gear drive should be sized and positioned so the overhung load capacities are not exceeded. If applied overhung loads exceed the capacity of the initial gear drive selected, a larger gear drive with adequate capacity must be selected.
6. Check External Thrust Load — Allowable thrust loads are provided on Page 13. If thrust and overhung loads are provided simultaneously, or if loads exceed allowable thrust capacities, consult Factory.
7. Check Gear Drive Dimensions — Pages 28 through 49 (Single Reduction), Pages 58 through 79 (Double Reduction, Worm-Worm), or Pages 86 through 115 (Double Reduction, Helical Worm).

Example

Application: Belt conveyor, heavy duty, head shaft speed is approximately 58 rpm, gear drive is to be flange mounted with hollow input shaft.

Duty Cycle: 16 hours per day.

Driver: 2 hp electric motor, 1750 rpm.

Output: 3" pitch diameter sprocket with a 2:1 chain drive.
Sprocket is mounted 1.5" from drive seal cage.

1. Service Factor from Page 10 is 1.50
2. Motor Horsepower is .5 hp
3. The head shaft speed must be multiplied by the chain drive ratio to obtain the gear drive output rpm (58 rpm x 2 = 116 rpm).
4. From Page 15, the desired configuration is a Type WOM. From Page 23, in the 1.50 Service Factor Table, the correct selection is a Size 1154, 15:1 ratio drive.
5. Overhung Load Check — The allowable overhung loads are listed in the table on Page 11. The output shaft allowable OHL is 517 lbs. The actual output shaft OHL must be calculated using the following formula:
$$\frac{126,000 \times .5 \times .619 \times 1.00 \times 1.56}{3.00 \times .774 \times 116} = 226 \text{ lbs}$$
The actual OHL of 226 lbs is less than the allowable of 517 lbs and therefore is acceptable.
6. Check External Thrust Load Capacity on Page 13. For this example there is no external thrust.
7. Check Gear Drive Dimensions on Page 32.

Drive Nomenclature

Drive Size (Shaft Centers)

1133 = 1.33	1262 = 2.62	1525 = 5.25
1154 = 1.54	1300 = 3.00	1600 = 6.00
1175 = 1.75	1325 = 3.25	1700 = 7.00
1206 = 2.06	1326 = 3.26	1800 = 8.00
1238 = 2.38	1425 = 4.25	11000 = 10.00

Product Type *

Expressed 2 to 5 letters, including Primary Type, Output Shaft, and Motor Flange, as required.

- WB — Basic drive without Feet (Single Reduction)
- WU — Worm Under (Horizontal LSS)
- WO — Worm Over (Horizontal LSS)
- WX — Vertical Low Speed Shaft
- WJ — Vertical High Speed Shaft (Horizontal LSS)
- WL — Flange Mounted drive
- WR — Extended Output Shaft

Primary/Type

- H — Helical drives (Double Reduction)
- W — Worm drives (Double Reduction)

Output Shaft

- Q — Hollow Low Speed Shaft

Motor Flange

- F — Flange Mounted Electric Motor with Coupling
- M — Flange Mounted Electric Motor without Coupling (Hollow Input Shaft)

Assembly Number

See Individual Dimension Pages

Model

- A, B, C, etc.
- S — Modified or Special

Sealed Drive

- P — Sealed Drive with Pressure Compensation System & Synthetic Lube.
- — Standard Drive (Not Sealed)

Ratio

Nominal Ratio Expressed 1 to 4 digits, as required

Motor Frame Size

NEMA Frame Sizes

- AH — 48C
- AA — 56C
- AB — 140TC
- AC — 180TC
- AD — 210TC
- AE — 250TC

IEC Frame Sizes

- GA — 63D
- GB — 71D
- GD — 80D
- GF — 90D
- GH — 100LD
- GK — 112D
- GM — 132D

Hollow Low Speed Shaft Bore Size

For Sizes 1133-1525, Output Shaft= "Q" Drives Only (Decimal Omitted)

(See Page 5 for footnotes.)

Service Factors

Service Factors

A gear drive is rated to a specific application by the use of Service Factor. Each application has its conditions and operating requirements. These have been analyzed and catalogued. Numerical values, based on field experience, have been assigned to these classifications for intermittent service of 3 to 10 hours per day and for service over 10 hours per day and also for the type of prime mover. . . electric motor or engine. Values for most applications are listed by Application on Page 11, Table 3 and by Industry at right, Table 2. Refer unlisted applications to Factory.

Since most industrial applications are electric motor driven, Service Factors are based on the use of electric motors. These factors can be easily converted to engine-drive factors as outlined in Table 1 below.

Service Factors are based on the assumption that the system is free of dynamic vibrations, as explained in the Basic Information section, and that maximum momentary or starting loads do not exceed 200% of the rated load. Refer applications subject to repetitive shocks and applications where exceedingly high energy load must be absorbed, as when stalling, to Factory for special considerations.

Occasional & Intermittent Service or Engine Driven Applications

Engine driven applications and applications operating up to 3 hours per day, continuously or intermittently, require adjusted Service Factors. Determine normal Service Factor for the application from the 3 to 10 hours per day column in Tables 2 or 3. Next, in the first column of Table 1 below, find this same Service Factor in bold face type. Then, to the right, under the desired hours of service and prime mover, locate the converted Service Factor.

For example, from Table 3, the Service Factor is 1.25 for a uniformly loaded belt conveyor. From Table 1, for the same application the following are the Service Factors for various conditions.

1. Engine driven (multi-cylinder): 3 to 10 hours per day, use 1.50.
2. Engine driven (multi-cylinder): over 10 hours per day, use 1.75.
3. Motor driven (electric): up to 3 hours intermittently, use 1.00.

Table 1 — Service Factor Conversions

Table 2 or 3 3 to 10 Hour Service Factor	3 to 10 Hours per Day	Over 10 Hours per Day	Intermittent — Up to 3 Hours per Day †	
	Multi-Cyl. Engine ‡	Multi-Cyl. Engine ‡	Motor	Multi-Cyl. Engine ‡
1.00	1.25	1.50	1.00	1.00
1.25	1.50	1.75	1.00	1.25
1.50	1.75	2.00	1.25	1.50
1.75	2.00	2.25	1.50	1.75
2.00	2.25	2.50	1.75	2.00

† For applications operating one half hour or less per day and applications driven by single cylinder engines, refer to Factory.

‡ These service factors are based on the assumption that the system is free from serious critical and torsional vibrations and that maximum momentary or starting loads do not exceed 200% of the normal load.

★ Service Factors for paper mill applications are applied to the nameplate rating of the electric drive motor at the motor rated base speed and are consistent with those shown in TAPPI standards.

◆ Anti-friction bearings only.

● A service factor of 1.00 may be applied at base speed of a super calender operating over a speed range of part constant hp and part constant torque where the constant hp speed range is greater than 1.5 to 1. A service factor of 1.25 is applicable to super calenders operating at constant torque over the entire speed range or where the constant hp speed range is less than 1.5 to 1.

Table 2 — Service Factors Listed by Industry

(For electric motor, steam turbine or hydraulic motor drives . . . recommendations are MINIMUM and normal conditions are assumed.)

▲ Selection of Rexnord products for applications whose primary purpose is the transportation of people is not approved. This includes such applications as freight or passenger elevators, escalators, man lifts, work lift platforms and ski tows and ski lifts. If the primary purpose of the application is material conveyance and occasionally people are transported, the Factory warranty may remain in effect provided the design load conditions are not exceeded and certification to the appropriate safety codes and load conditions has been obtained by the system designer or end user from the appropriate enforcement authorities.

■ Contact Rexnord for proper selection of a Falk RAM mixer drive.

Overhung Load and Thrust Loads

Overhung Load — Overhung load is imposed upon a shaft when a pinion, sprocket, or sheave is used as a power take-off. The magnitude of the load varies with the type of take-off and its proximity to the shaft bearing. Calculate the load (including minimum required service factor) and check the result against the tabulated overhung load rating. The overhung load formula below considers the transmitted horsepower without service factor. This is appropriate for applications where starting loads, momentary overloads, and brake capacities do not exceed 200% of drive rating (100% overload). For other conditions, compute the equivalent power by multiplying the transmitted power by the appropriate service factor.

Overhung Load Formulas:

$$\text{Output OHL} = \frac{126,000 \times \text{motor hp} \times \text{output hp rating} \times F_c \times L_f}{\text{pitch diameter} \times \text{input hp rating} \times \text{output rpm}}$$

$$\text{Input OHL} = \frac{126,000 \times \text{motor hp} \times F_c \times L_f}{\text{pitch diameter} \times \text{input rpm}}$$

Where:

Output hp Rating = from Pages 24 through 27

Input hp Rating = from Pages 22 through 27 (Single Reduction), Pages 52 through 57 (Double Reduction, Worm-Worm), or Pages 82 through 85 (Double Reduction, Helical Worm)

F_c = load connection factor

L_f = load location factor (The input shaft OHL is assumed to be applied at one shaft diameter from the seal cage, ($L_f=1.0$) If the load is applied at a distance greater than one shaft diameter from the seal cage, refer the application to Falk)

The calculated overhung load must be less than or equal to the capacity shown on Page 13.

Load Location Factor (L_f) — The output shaft load location factors are shown below.

L_f - Load Location Factors for Output Shafts

Distance in inches H	DRIVE SIZE

4.250	1.69	1.28	1.20	1.06
4.500	1.79	1.32	1.24	1.10
4.750	1.89	1.36	1.28	1.13
5.000	1.96	1.40	1.32	1.16
5.750	1.26

† Distance is in inches from the L.S. Seal Cage. Interpolate for Load Location Factors at intermediate distances. For example, the load location factor is 1.56 for Size 1262 when distance is 2.375 inches. Consult Falk for distances greater than those shown.

Load Connection Factor (F_c)

Type of Connection	Factor
Sprocket or Timing Belt	1.00
Machined Pinion & Gear	1.25
V-Belt	1.50
Flat Belt	2.50
Synchronous (Timing) Belts	1.30

† Refer all multiple chain, sprocket, and pinion mounted applications to Falk for Deflection Analysis.

Locate the centerline of the load as close to the drive housing as practical to minimize the overhung load and increase the bearing life. The overhung load formula employs the transmitted horsepower, without service factor, providing the overloads starting loads and brake capacities do not exceed the amounts listed in basic information on Page 6.

Example:

Gear Drive Size = 1325WB2A30, exact ratio of 30.0

Input hp rating = 3.003 hp

Output hp rating = 2.454 hp

Motor = 3.0 hp at 1750 rpm

Low Speed shaft rpm = $1750 \div 30.0 = 58.3$ rpm

4" diameter sprocket mounted on low speed shaft. Centerline of sprocket overhung load is positioned at 1.125 inches.

Calculate the overhung load as follows:

$$\text{OHL} = \frac{126,000 \times 3.0 \times 2.454 \times 1.00 \times .95}{4 \times 58.3 \times 3.003} = 1258 \text{ lbs}$$

Allowable OHL on Page 13 is 1536 lbs and is satisfactory for this selection.

Consult Factory for Higher Overhung Load Ratings — In many cases, overhung load capacity in excess of that published is available. Published ratings are based on a combination of the most unfavorable conditions of rotation, speed, direction of applied load and drive loading. If the actual load should exceed the published capacity, refer full details to Factory.

Thrust Loads

Output shaft external thrust capacities are shown below. The applied external thrust must be less than or equal to the published capacity. The published thrust capacity is for applications with a pure thrust load only. Combined overhung load and thrust applications should be referred to the Factory.

Engineering Data

The following overhung load values are based on load located at one shaft diameter from seal cage. Published ratings are based on a combination of the most unfavorable conditions of loading. For higher ratings, refer full data to Factory.

Selection Guide/Extended Output Shaft Drives

Type WR

Select extended output shaft reducers using the Rating Table Method shown on Page 119.

Step 4, select drive configuration from below, then refer to Page 119 to select drive size and check overhung load.

Step 5, load connection factors (F_c) are listed on Page 119.

Step 7, Check drive dimensions — Pages 120-129.

Overhead Conveyor Drive

Single Reduction

Ratings — Pages 24-27

Dimensions — Pages 120-123

Double Reduction Worm-Worm

Ratings — Pages 54-57

Dimensions — Pages 124-127

Double Reduction Helical-Worm

Ratings — Page 82-85

Dimensions — Pages 128-129

Overhung Load

Single and Double Reduction Input Shaft Overhung Load — Pounds

L_f — Load Location Factors for Output Shafts

Distance From End of Shaft In Inches ×	DRIVE SIZE					
	1425	1525	1600	1700	1800	11000
0	1.00	1.00	1.00	1.00	1.00	1.00
0.5	1.03	1.03	1.02	1.02	1.02	1.02
1.0	1.06	1.06	1.04	1.04	1.04	1.03
1.5	1.09	1.09	1.06	1.06	1.05	1.05
2.0	1.12	1.12	1.09	1.08	1.07	1.06
2.5	1.16	1.15	1.11	1.10	1.09	1.08
3.0	1.20	1.19	1.14	1.13	1.11	1.10
3.5	1.24	1.23	1.16	1.15	1.13	1.12
4.0	1.28	1.27	1.19	1.17	1.15	1.14
4.5	1.32	1.32	1.22	1.20	1.18	1.16
5.0	1.37	1.36	1.25	1.23	1.20	1.18
5.5	1.43	1.42	1.28	1.26	1.23	1.20
6.0	1.31	1.29	1.25	1.22
6.5	1.35	1.32	1.28	1.24
7.0	1.39	1.35	1.31	1.27
7.5	1.42	1.38	1.33	1.29
8.0	1.36	1.31
8.5	1.40	1.34
9.0	1.43	1.37

* Distance is in inches from the end of output shaft (inward towards housing). Interpolate for load location factors at intermediate distances. For example, the load location factor is 1.21 for size 1525 when distance is 3.25 inches.

Consult Factory for Higher Input Shaft Overhung Ratings

In many cases, overhung load capacity in excess of that published is available. Published ratings are based on a combination of the most unfavorable conditions of rotation, speed, direction of applied load and drive loading. If the actual load should exceed the published capacity, refer full details to the Factory.

Input Shaft OHL

Calculate the input shaft overhung load using the following formula:

$$\text{Input OHL} = \frac{126,000 \times \text{motor hp} \times F_c \times L_f}{\text{pitch diameter} \times \text{input rpm}}$$

Where:

F_c = load connection factor (below)

L_f = load location factor — the input shaft OHL is assumed to be applied at one shaft diameter from the seal cage, (L_f = 1.0).

If the calculated overhung load exceeds the capacity shown above or if the load is applied at a distance greater than one shaft diameter from the seal cage, refer the application to the Factory.

Load Connection Factor (F_c)

Type of Connection	Factor
Sprocket or Timing Belt	1.00
Machined Pinion & Gear†	1.25
V-Belt	1.50
Flat-Belt	2.00
Synchronous (Timing) Belts†	1.30

▼ Refer all multiple chain, sprocket, and pinion mounted applications to Factory for deflection analysis.

Single Reduction/Extended Output Shaft

SEE PAGE 123 FOR MOTOR MOUNTING DIMENSIONS.

Helical & Worm Primaries/Type HP & WP

- Increases Inventory & Application Flexibility.
- Choice of Ratios 2:1 through 60:1.
- Three Input Types:
 - Solid Input
 - Motorized Hollow Input
 - Motorized Solid Input/ Coupling
- Motor Frame

Ratio Multipliers for Universal Mounting Between Any C-Face Motor & Drive

Selection Procedure

1. Determine Service Factor (SF)
2. Determine Motor Horsepower (hp) Input rpm, Output rpm, & Overall Ratio

$$\text{Overall Ratio} = \frac{\text{Input RPM}}{\text{Output RPM}}$$

3. Calculate Equivalent Output Torque Rating

$$\frac{\text{HP} \times \text{SF} \times 6300}{\text{Output RPM}}$$

4. Select Secondary Size & Type.

$$\text{Input RPM} = \frac{\text{Motor RPM}}{\text{Primary Ratio}}$$

$$\text{Secondary Ratio} = \frac{\text{Overall Ratio}}{\text{Primary Ratio}}$$

Select the Secondary Size & Ratio at the Corresponding Input/Output rpm with an Output Torque Rating that Exceeds the Equivalent Output Torque

5. Check Overhung or Thrust Loads.
6. Select the Primary Size & Type.
Select the Primary Size & Ratio at the Corresponding Input/Output rpm with an Equivalent H.P. Rating (SF x Motor hp) that Exceeds the drive Input hp Rating.
Match the Primary C-Face Output to the Secondary C-Face Input Flange.
NOTE: The Output Torque Delivered is a Function of the Overall Drive Combined Efficiency!
7. Check Drive Dimensions.

EXAMPLE:

Select a Drive for a Uniformly Loaded, Hollow Shaft Connected Belt Conveyor with a Headshaft Speed of 17.5 rpm, Operating 16 Hours Per Day, Driven by a 1750 rpm, 3 hp Electric Motor.

1. Service Factor is 1.25 from Page 11.
2. Motor Horsepower is 3 hp.
3. Drive Output Speed is 17.5 rpm,
$$\frac{1750 \text{ rpm Input}}{17.5 \text{ rpm Output}} = 100:1 \text{ Overall Ratio}$$

NOTE: When Using a Worm Gear Secondary, the Selection can be made from the WBW Worm-Worm Quick Selection Tables. After making the selection, substitute the WPM Worm Primary of the same size and ratio for the WBW standard primary, onto the secondary drive with a C-Face input sized to match the primary output.

4. Equivalent Output Torque Rating:
$$\frac{3 \text{ HP} \times 1.25 \text{ SF} \times 63,000}{17.5 \text{ rpm}} = 3,500 \text{ in-lb}$$
5. Select Secondary Size & Type:
$$\frac{100:1 \text{ Overall Ratio}}{\text{Primary Ratio}} = \text{Secondary Ratio}$$

$$\frac{1750 \text{ RPM}}{5:1 \text{ Primary Ratio}} = 350 \text{ RPM Secondary Input Speed}$$

Select the Secondary Size at 350 rpm input with 20:1 ratio and an output torque rating equal to or greater than 13,500 in-lb.

6. No Overhung or Thrust Loads.
7. Select Primary Size & Type: Equivalent hp rating = 3hp x 1.25 SF = 3.75 Ehp. Select the primary size at 1750 rpm input and 20:1 ratio with an input hp rating greater than 3.75 hp.
8. Check Drive Dimensions.

Additional Product Offerings for Special Applications

Pressure Equalization System

- Where a sealed drive is needed.
- Keeps internal pressure down, lubricant in the box and contaminants out.
- Very low maintenance.
- Synthetic lubricant is standard.
- Viton7 Seals are standard.

Stainless Steel

- Suitable for harsh environments and special wash-down applications.
- Housings and covers are 304 grade cast stainless steel, output shafts are 303 grade stainless steel.
- External hardware is all stainless steel.
- Includes Pressure Equalizing System
- Viton7 seals are standards.
- Synthetic Lube.
- Stainless Steel Nameplate.

BISSC Certified

- Suitable for wash-down applications and are furnished with USDA approved paint, nickel plated shafts, Viton7 seals, smooth exterior surfaces, solid head plugs and bolts for easy cleaning, and a stainless steel nameplate.
- Certifications:
 - Baking Industry Sanitation Standard Committee (BISSC) Certified
 - Standard Lubrications us USDA h-2 Approved

Size and Type Availability of Pressure Equalization System

All Sizes from 1133W (1.33" CD) through 1525W (5.25" CD).

All Types of Single Reductions and Double Reductions Worm-Worm Styles.

★ NA = Not Available

Yes = Item is interchangeable between 100 & 1000 Series Drives.

No = Item is not interchangeable between 100 & 1000 Series Drives.

● Item or Size is Discontinued for 1000 Series.

◆ Distance from the end of the Input Shaft to the Centerline of the Drive is shorter on the 1000 Series Omnibox. All other Critical Dimensions are the same.

* 100 Series Bushings may be used in 1000 Series Drives provided the set screw holes are redrilled.

† Sizes 1700 and 1800 are Types WBF or WBQF.

Non-Preferred Mounting Positions

The mounting positions noted below are not recommended due to the increased probability of leakage from high speed shafts seals. Assembly position options also apply to motor flange drives.

Single Reduction

All Types of Worm Drives mounted in the Worm-Under position or where the drive is rotated so the High Speed Solid Shaft is pointing Vertically Down.

Double Reduction/Worm-Worm

All Types of Worm Primaries where the primary is in the Worm-Under Position or where the Worm Primary is rotated so the High Speed Shaft is pointing vertically down.

Double Reduction/Helical Worm

All Types of Helical Primaries where the High Speed Shaft is in the six o'clock position (High Speed Shaft is beneath the Low Speed Shaft) or where the Helical Primary is positioned with the High Speed Shaft pointing vertically down.

Double Ended High Speed Shafts

World Class Customer Service

For more than 100 years, the dedicated people of Rexnord have delivered excellence in quality and service to our customers around the globe. Rexnord is a trusted name when it comes to providing skillfully engineered products that improve productivity and efficiency for industrial applications worldwide. We are committed to exceeding customer expectations in every area of our business: product design, application engineering, operations, and customer service.

Because of our customer focus, we are able to thoroughly understand the needs of your business and have the resources available to work closely with you to reduce maintenance costs, eliminate redundant inventories and prevent equipment down time.

Rexnord represents the most comprehensive portfolio of power transmission and conveying components in the world with the brands you know and trust.
