Tantalum Capacitors

Tantalum Capacitors

Tantalum capacitors offer several advantages over conventional multi-layer ceramic chip capacitors, such as larger capacitance in a more compact form factor and superior temperature and DC bias characteristics.

ROHM's broad lineup of tantalum capacitors include models that utilize a bottom electrode configuration, low ESR conductive polymer types, units with an open structure to prevent combustion and damage to peripheral components, and standard products featuring excellent mountability and reliability.

Bottom surface electrode large capacitance type

TCS Series

Summary

The TCS series employs a high efficiency package design for greater compactness and a lower profile with ultra-high capacitance.

Features

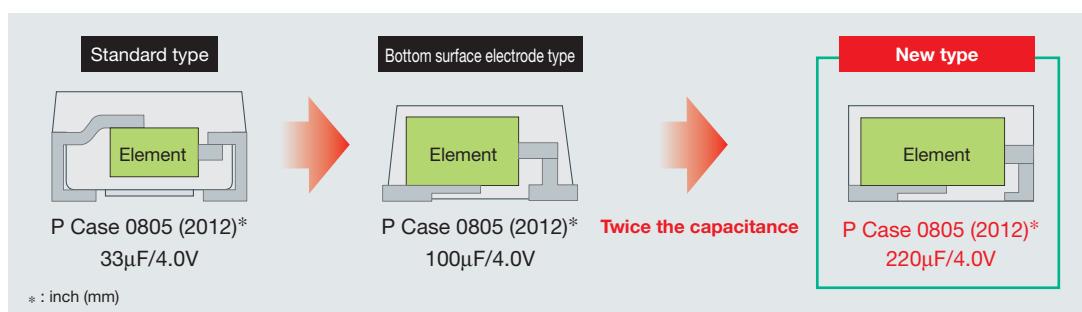

- Thin
- Compact
- Ultra-high capacitance

Applications

Mobile phones, digital cameras, digital camcorders, portable music players, and other thin, compact electronic devices

New package construction features smaller, thinner form factor with larger capacitance

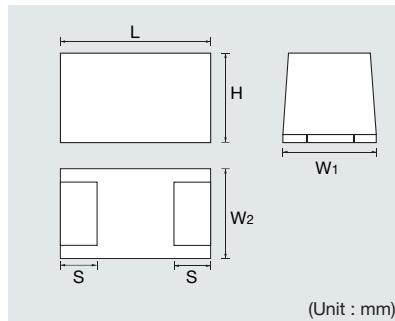

The unique package construction allows to put a larger tantalum element than conventional bottom electrode types (TCT Series), resulting in approximately twice the capacitance.

Bottom surface electrode type

TCT Series

*The TC Series uses M cases exclusively.

Summary

The compact terminal construction enables significantly higher capacitances than conventional types.

Features

- Thin
- Compact
- High capacitance
- Low ESR

Applications

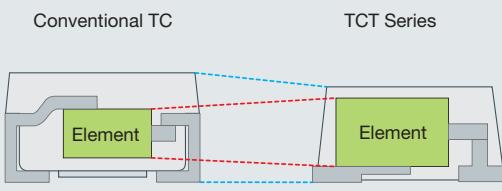

Mobile phones, digital cameras, digital camcorders, portable music players, and other thin, compact electronic devices

Compact · Low Profile · Large Capacitance

The compact terminal construction makes it possible to use a larger tantalum element, resulting in significantly higher capacitances than conventional units in the same size. In addition, the contact area between the element and terminal is larger, reducing ESR.

A broad lineup is available in a range of package types, from the ultra-compact U Case (0402^{*} size) to the 2412^{*}-sized CL Case.

^{*} : inch

Larger element in a lower profile package

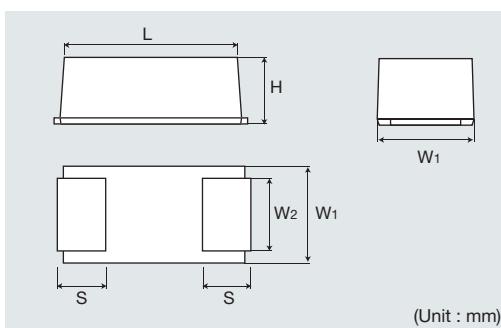

Lineup

The use of the bottom surface electrode construction results in a relatively large amount of capacitance in every package size, ensuring that they are among the best in the industry.

Fail-safe open structure type

TCFG Series

Summary

High-reliability series with built-in (open) mechanism that shuts OFF the current during overheating.

Features

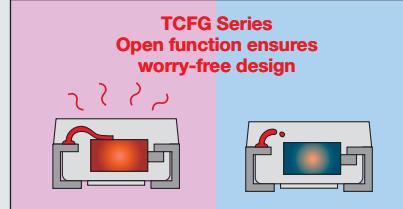

- High reliability

Applications

PC, PC peripherals, digital cameras, digital camcorders, automotive ITS-related devices, electronic office equipment, and more.

Open mechanism built in for greater reliability

The open configuration stops current flow once the unit overheats, preventing damage to other parts of the circuit, contributing to worry-free design.

Lineup

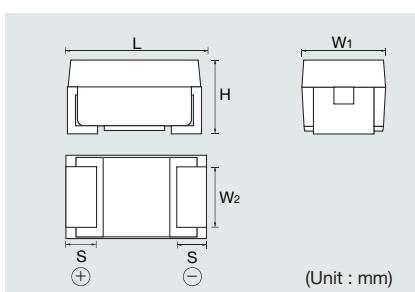

Available sizes ranging from the compact P case (2012-12[0805] size) to the oversized D case (7343-30[2917] size).

The best selection in the industry allows for greater freedom of design.

TC Series

Summary

Advanced semiconductor manufacturing technology developed for transistors and diodes are utilized for stable quality control and superior productivity.

Available in two package types, P Case [2012-12 (0805) size] and A Case [3216-18 (1206) size], this lineup is designed for large capacitance in a compact form factor.

Features

- Compact

Applications

PCs, PC peripherals, mobile phones, digital cameras, digital camcorders, and more.

Conductive polymer bottom surface electrode type

TCTO Series

Summary

This high performance series puts an ultra-low ESR conductive polymer into a bottom electrode package, resulting in large capacitance in a compact, low-profile form factor.

Features

- Ultra-low ESR
- Non-combustible
- Thin
- Compact
- High capacitance

Applications

PCs, PC peripherals, digital cameras, digital camcorders, car audio, LCD TVs, and more.

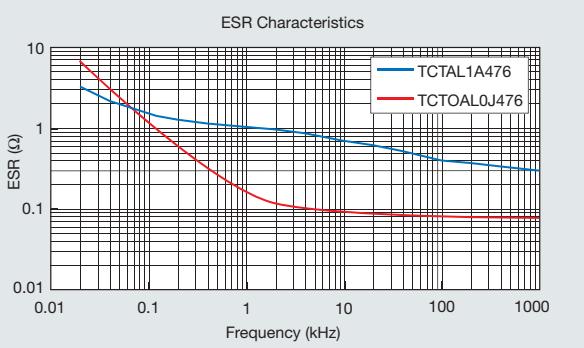

Ultra-low ESR / Low Profile / Large Capacitance

ROHM now offers conductive polymer tantalum capacitors in a bottom electrode package configuration for ultra-low ESR with high resistance to combustion. The TCTO series offers these qualities along with large capacitance (100uF max.) in a compact, low-profile form factor (3.2x1.6mm, t=1.1mm).

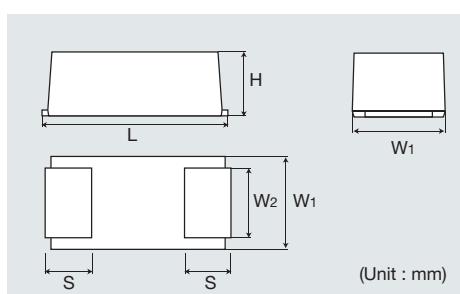

M and P Case products are currently under development for compact applications.

Lineup

Conductive polymer type

TCO Series

Summary

This series utilizes conductive polymers in the cathode for significantly reduced ESR characteristics.

Features

- Ultra-low ESR
- Non-combustible

Applications

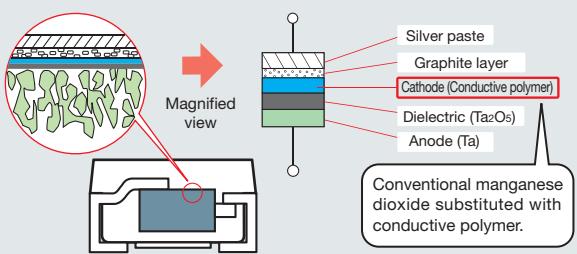

PCs, PC peripherals, digital cameras/camcorders, portable audio players, automotive ITS-related devices, and more.

Ultra-low ESR • Non-combustible

ESR has been significantly reduced due to utilization of a conductive polymer instead of conventional manganese dioxide.

In addition the conductive polymer type reduces the risk of smoke or fire compared with conventional products.

Internal Construction

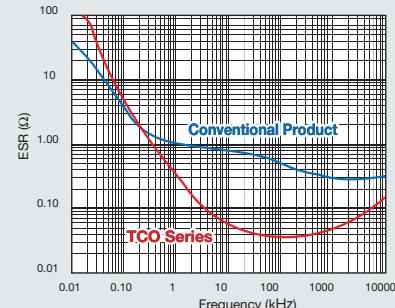

Lineup

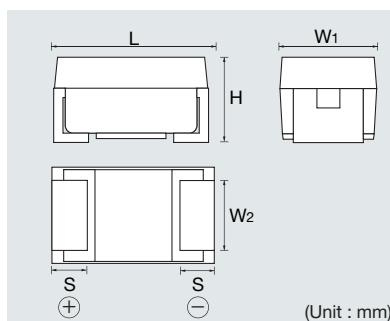

In addition to its compact size and large capacitance, the TCO series features low ESR characteristics over a broad frequency band, making it perfect for noise absorption in high-frequency circuits.

A broad lineup is offered, ensuring compatibility with a wide variety of applications, including mobile phones, notebook PCs, and other data communications devices.

Recommended soldering conditions

■ TCT/TCFG/TC Series

[Recommended reflow soldering conditions]

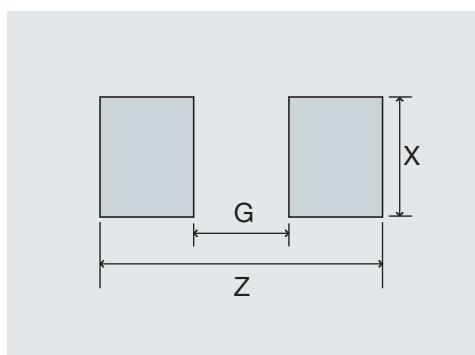

- ① Preheating rate : 1 to 5°C/s
- ② Preheating : 120 to 160°C , 50 to 120s
- ③ Reflow heating rate : 1 to 5°C/s
- ④ Soldering (high temperature period) : 200°C , 30 to 60s
- ⑤ Peak temperature : 230 to 260°C , 10s Max.
- ⑥ Cooling : 60s Min.
- ⑦ Reflow count : 2 times Max.

[Recommended hand soldering conditions]

- ① Solder tip temperature : 350°C Max. (TCFG series 300°C Max.)
 - ② Time : 5s Max.
- * TCT series is not suitable for flow soldering.

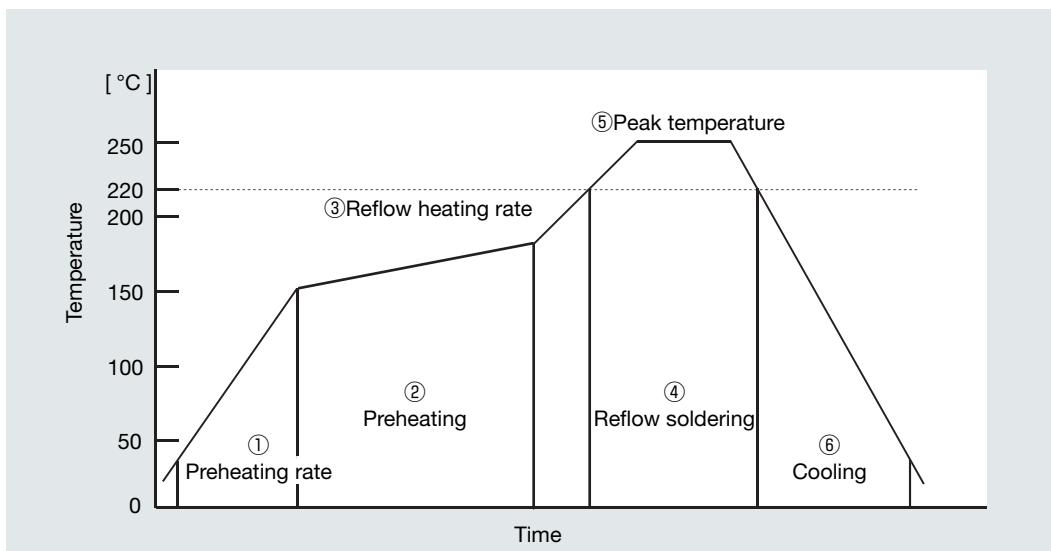

■ Recommended land pattern dimensions

(Unit : mm)

Usage Precautions

- 1** Verification and confirmation of performance characteristics of products, after mounting on board, is strongly advised.
- 2** In particular, if a transient load (a large load applied in a short period of time, such as pulse) is applied, confirmation of performance characteristics after mounting on board is strongly recommended. Avoid applying power exceeding the normal rated power, since exceeding the power rating under steady state load conditions may negatively affect product performance and reliability.
- 3** Allowable ripple voltage
The sum of the peak values of DC and AC voltage should not exceed the rated voltage. The ripple voltage, if applied, should not exceed the maximum allowable value. The allowable ripple voltage at different temperatures is calculated using the formulas below.

 $E = \text{Allowable ripple voltage}$
 $E_{\text{Max.}}(\text{at } 50^{\circ}\text{C}) = 0.7 \times E_{\text{Max.}}(\text{at } 25^{\circ}\text{C})$
 $E_{\text{Max.}}(\text{at } 85^{\circ}\text{C}) = 0.5 \times E_{\text{Max.}}(\text{at } 25^{\circ}\text{C})$
 $E_{\text{Max.}}(\text{at } 125^{\circ}\text{C}) = 0.3 \times E_{\text{Max.}}(\text{at } 25^{\circ}\text{C})$
- 4** The voltage should be reduced as much as possible.
In particular, a voltage lower than 1/3 of the rated voltage is recommended when used in a low impedance circuit.
- 5** The tester must not be in contact with a capacitor. If this occurs, an excessive or reverse voltage may be applied to the capacitor.
- 6** Please refer to the derating curve during operation from 85°C to 125°C.
- 7** Apply a series-resistor rated at 3W per 1V.
- 8** When a highly active halogenous (i.e. chlorine, bromine) flux is used, the remainder of flux may negatively affect product performance and reliability. Therefore, a halogen-free flux should be used.
- 9** Reflow soldering is recommended. However, if flow soldering will be performed please consult with ROHM in advance.

For basic guidelines on using chip tantalum capacitors, please refer to the technical reports issued by Japan Electronic and Information Technology Industries Association.

[JEITA RCR-2368B: Guidelines for notes on fixed tantalum electrolytic capacitors for electronic equipment.
(Application Safety Guide for fixed electrolytic tantalum capacitors)]

The content specified in this document is correct as of 1st June, 2009.

No copying or reproduction of this document, in part or in whole, is permitted without the consent of ROHM Co.,Ltd.

The content specified herein is subject to change for improvement without notice.

The content specified herein is for the purpose of introducing ROHM's products (hereinafter "Products"). If you wish to use any such Product, please be sure to refer to the specifications, which can be obtained from ROHM upon request. Examples of application circuits, circuit constants and any other information contained herein illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.

Great care was taken in ensuring the accuracy of the information specified in this document. However, should you incur any damage arising from any inaccuracy or misprint of such information, ROHM shall bear no responsibility for such damage.

The technical information specified herein is intended only to show the typical functions of and examples of application circuits for the Products. ROHM does not grant you, explicitly or implicitly, any license to use or exercise intellectual property or other rights held by ROHM and other parties. ROHM shall bear no responsibility whatsoever for any dispute arising from the use of such technical information.

The Products specified in this document are intended to be used with general-use electronic equipment or devices (such as audio visual equipment, office-automation equipment, communication devices, electronic appliances and amusement devices).

The Products specified in this document are not designed to be radiation tolerant.

While ROHM always makes efforts to enhance the quality and reliability of its Products, a Product may fail or malfunction for a variety of reasons.

Please be sure to implement in your equipment using the Products safety measures to guard against the possibility of physical injury, fire or any other damage caused in the event of the failure of any Product, such as derating, redundancy, fire control and fail-safe designs. ROHM shall bear no responsibility whatsoever for your use of any Product outside of the prescribed scope or not in accordance with the instruction manual.

The Products are not designed or manufactured to be used with any equipment, device or system which requires an extremely high level of reliability the failure or malfunction of which may result in a direct threat to human life or create a risk of human injury (such as a medical instrument, transportation equipment, aerospace machinery, nuclear-reactor controller, fuel-controller or other safety device). ROHM shall bear no responsibility in any way for use of any of the Products for the above special purposes. If a Product is intended to be used for any such special purpose, please contact a ROHM sales representative before purchasing.

If you intend to export or ship overseas any Product or technology specified herein that may be controlled under the Foreign Exchange and the Foreign Trade Law, you will be required to obtain a license or permit under the Law.
