XLB - Lined Ball Valves

CRANE[®]

ChemPharma Flow Solutions

www.cranechempharma.com

Lower Torque - Smaller Actuators

Lower torque
smaller actuators,
reduced costs, space
and weight saving

Actuator mounting
fully compliant with ISO
5211 allowing use of
standardized mounting kits
(see page 14)

Compact design
allows installation
in space restricted
areas in parallel
piping systems

Size range
1/2" / DN15 through
6" / DN150
Other sizes available up to 12" / DN300

Temperature range
ASME: -20°F (-29°C) to
400°F (204°C)
EN: -10°C (14°F) to
204°C (400°F)
See pressure temperature rating on page 12,
for applications down to -60°C (-76°F)
contact your Crane ChemPharma Flow Solutions
sales office.

Valve pressure classes
EN PN16 and
ASME Class 150

All wetted components
are fully lined with
permeation resistant PFA
Teflon[®] material as a
barrier to corrosion

Teflon[®] is a registered trademark of
DuPont[™] used under license.

Innovative Stem Sealing System

Atmospheric seal
innovative "pressure assisted" SX seal device providing the highest protection from fugitive emissions.

Wide conical plastic connection
designed to maintain total seal even under extreme thermal cycling.

Metal to metal contact
at the body joint ensures that no parts of the lining can be crushed or deformed because of forces within the piping system.

Anti blow-out integral ball and stem
retains positive control and eliminates the danger of stem/ball failures due to liner damage at wear points.

Locked in fluoroplastic liner
resists shrinkage, collapse and permits vacuum applications.

Stainless steel lever
latching device minimizes possibility of accidental operation. Locking capability as standard. Made of stainless steel material ideal for corrosive environments.

Chemically modified PTFE (CMP) seats
provide greater pressure stability at higher temperatures than conventional PTFE.

Dynamic Body Joint Design

When valves are closed under pressure, the ball is able to float with line pressure and pressurize the downstream seat to further enhance the in-line seal. However, the stem will tend to tilt and can side load conventional packing, leading to potential wear and eventual leakage to atmosphere. The SX seal in the XLB valve moves in conjunction with the spherical portion of the stem, maintaining a constant seal to atmosphere.

◀ **Fig.1:** In a conventional valve, moderate stem side loading can lead to significant emissions issues.

Other situations where side loading can occur during valve actuation include: Heavy manual operation, actuation loads and misalignment, abusive contact.

▶ **Fig.2:** The XLB valve's pressure assisted SX seal stays in constant contact with stem spherical seal surface to significantly reduce the chance of atmospheric leakage.

XLB dynamic body joint design retains pressure boundary during thermal cycles

The body assembly has metal-to-metal connection that offers resistance against forces that may be created in the pipework. This feature is designed to alleviate deformation and damage to the lining, even under pressure induced stresses. Also, the body joint sealing is provided with taper lining overlap, which is especially effective under high internal pressure and temperature variations.

XLB Lined Ball Valve Applications

XLB Valves offer economical solutions for the vast majority of chemical applications while maintaining the highest possible degree of performance in terms of in-line leakage and fugitive emissions. They can be used in many diverse industries such as:

- Industrial Inorganic Chemicals
- Industrial Organic Chemicals
- Alkali's & Chlorine
- Detergent production
- Bromine production
- Nitrogenous & Phosphorus Fertilizers
- Pharmaceutical preparation
- Petroleum Refining
- Metal & Mining industry
- Plant Protective Agent production
- Pulp, Paper & Wood
- Water treatment
- Sulfur recovery
- Food processing
- Sugar industry
- Corn industry

XLB Lined Ball Valve Pressure/Vacuum Temperature Rating

XLB Pressure/Temperature Diagram

XLB Vacuum/Temperature Diagram

Notes

- 1) Body material (EN-JS 1049 / 60-40-18) meets the requirements of both EN 1563 and ASTM A395
- 2) Minimum temperature for ductile iron material (60-40-18) according to ASME B16.42 is -20° F (-29° C)
- 3) Minimum temperature for EN-JS 1049 is -10° C (-14° F).
- 4) Maximum cold working gauge pressure for JIS 10Kg is 10 bar (145 psig) for EN PN16 is 16 bar (232 psig) and ASME Class 150 is 250 psig (17.2 bar).
- 5) Contact your Crane ChemPharma Flow Solutions sales office for applications outside the relevant pressure and temperature limits of the design code in question (dash line)

About CRANE ChemPharma Flow Solutions, XOMOX

Product Selection

Xomox offers a broad line of process valves, actuators, accessories, and related services including:

- XOMOX® Process Valves
- Matryx® Vane Actuators
- XOMOX XRP™ Actuators

Please refer to our website www.cranechempharma.com for technical documentation (pdf) and to access the worldwide network of XOMOX® Authorized Distributors.

About Crane ChemPharma Flow Solutions™

CRANE ChemPharma Flow Solutions designs and manufactures a variety of high performance products including: sleeved plug valves, lined valves, high performance butterfly valves, aseptic and industrial diaphragm valves, actuation, lined pipe, fittings and hoses, and air operated diaphragm and peristaltic pumps.

Our trusted brands Saunders®, XOMOX®, DEPA®, ELRO, Revo®, Resistoflex®, and ResistoPure® offer our customers complete and innovative fluid handling solutions designed for the most demanding corrosive, erosive and high purity applications within the chemical, bio-technology and pharmaceutical industries.

About XOMOX®

Crane ChemPharma Flow Solutions, Xomox is a manufacturer of engineered industrial products, including valves for processing industries.

All major Xomox facilities are certified under ISO-9000. Engineering design centers in Cincinnati and Lindau are certified under ISO-9001. Xomox valves meet ASME, JIS and EN standards for global applications.
